Smart Mirror Volume Level Adjustment	37
Increase or Decrease Display Power Off Delay Time	37
Magic Mirror Keyboard Controls/Appearance	37
EXAMPLES OF FINISHED DISPLAYS (PORTRAIT AND LANDSCAPE)	38

Getting Started – Connecting to Wifi (<1 Minute):

- Using the included Bluetooth keyboard and mouse, select "Ctrl" & "m" to minimize the Magic Mirror window (currently being displayed in the background)
- In the upper right of the toolbar, select your WIFI connection  and enter your WIFI password

If some modules are not loading or you have a blank display, wait roughly 5 minutes and then select "Ctrl" & "q" from your keyboard and the Magic Mirror display will automatically restart/reload.

Pi Credentials (for VNC and SSH)

User: pi

Password: mirror

SPECIAL NOTES

- Attach the motion sensor to the top of the frame (with included velcro adhesive). Please also note the location of the microphone on top of the monitor motion sensor.

(OPTIONAL) HDMI switch for Fire TV

- The button on the remote labeled "1" will switch to the Smart Mirror and the button labeled "2" will switch to the Fire TV. The other buttons are not used.
- Optional HDMI repeater with Velcro (for FireTV HDMI switch)

(OPTIONAL) Fire TV Setup (1 minute)

1. If the remote is not working, hold down the Select button for 5 seconds to put the **remote** into pair mode. Then power the Fire TV on and off and then select the home key to begin setup.
2. **Please note:** You can pair your Fire TV with your own Bluetooth speaker (in the Fire TV settings menu). If you do not have a Bluetooth speaker or did not purchase the optional Bose soundbar, the Fire TV sound will come from a separate speaker on the back of your smart mirror. The sound control for the Fire TV is a tiny dial on located on the side of the frame.

PLEASE READ THIS BEFORE CONTINUING

Modules and API Keys

Not all modules in this setup guide require an API key and not all modules are required for setup. [Click the on-screen setup link in the MagicMirror to get started.](#)

- What's a module? Modules are very similar to live widgets that you would install on your smartphone (i.e. live weather, calendar, news, etc).
- What's an API key and why do I need it? An API is an application interface that allows modules to 'talk' to servers of the application creator. These keys prevent overuse of the API, which could slow down servers and also helps to prevent any malicious use. The key also connect your account (i.e Spotify, Google, etc.) with a module.

Every API key in this setup guide is free to use, secure, and private. The signup and steps for each API key vary for each module, so please carefully follow this step-by-step guide. If you have any questions or if you would like assistance, please contact us at electrotherapydesigns@gmail.com. Some API keys require a business name or phone number to setup and you can simply fill in a link such www.acme.com for a business and phone number 555-555-5555.

We realize that some setup steps in this guide can be challenging. Optionally and at your request, Electrotherapy Designs can remotely log into your Smart Mirror to help with setup or fix any issues. This remote assistance is a free service. Follow the instructions on [page 28 "Remote Support"](#) and contact us at electrotherapydesigns@gmail.com if you would like to schedule a remote assistance session or if you have any questions.

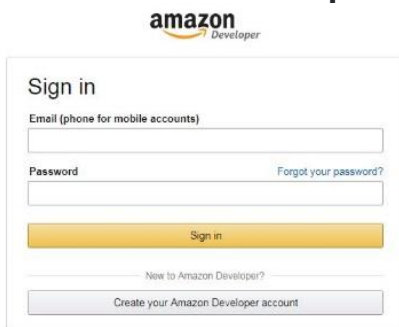

Let's get started!

(REQUIRED) Alexa Voice Assistant – (<5 minutes):

1. Minimize the MagicMirror window (currently running in the background) by clicking on the background and selecting "Ctrl" & "m" (no caps) on the keyboard to minimize the MagicMirror window.
2. Click on the command prompt icon  in the desktop toolbar (upper left of desktop)
Enter or copy and paste the following in the command prompt window:
 - Enter: `cd /opt/AlexaPi/src`
 - Then enter: `sudo python3 auth_web.py`
 - **Keep the command prompt window open for the next step.**
3. With command prompt window still open , select the "Ctrl" key and click this link to open a new browser window: <http://localhost:5050>
 - a. You will then be prompted to enter your Amazon credentials.

The image shows the Amazon Developer sign-in page. It has a white background with the Amazon logo at the top. The form includes fields for 'Email (phone for mobile accounts)' and 'Password', a 'Forgot your password?' link, a 'Sign in' button, and a 'Create your Amazon Developer account' button for new users.

- b. After entering your credentials, you should see a browser screen that reads **"Success!"**. Close the browser window.
4. From the Raspberry Pi desktop toolbar, click on the "foot" icon (upper left)  and click **"Shutdown"** and then **"Reboot"**. **Once the MagicMirror boots back up, click on the setup link in the MagicMirror window and follow step #1 above to return to this setup guide.**
 5. You will hear Alexa say "Hello" and you will now be able to talk to Alexa using the wake word **"smart mirror"**.

(OPTIONAL) Install the Amazon Alexa App (<5 Minutes)

- To install the **Amazon Alexa** app on your smart phone. This will allow you to add events to your Google calendar in your Magic Mirror simply by saying **"Smart Mirror, add event to calendar"** or **"Smart Mirror, set a reminder"**.
- Open **Amazon Alexa**  from your smart phone and under **"Home"**, select the three bars in the upper left of the screen , then select **"Settings"** at the bottom of the menu.
- Scroll down until you see **"Calendar & Email"**. Then select **"Add Account"** to add your Google Calendar account (you can add more than one calendar) and select **"Connect Account"** and sign into your Google account.

(OPTIONAL – but recommended) Alexa Flash Briefings (10 minutes)

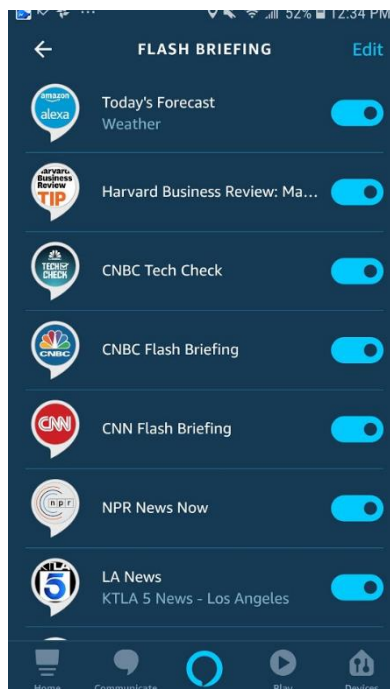

Flash briefings are short, informative pieces of prerecorded audio that are updated daily.

It's kind of like a set of brief (2-5 minute) podcasts or radio shows that are curated by you. Each Alexa flash briefing can last up to ten minutes and are usually pushed out on a daily or weekly basis. You can also get short-form lifestyle content like a daily horoscope or word-of-the-day, local or national news, receive professional advice or daily tips. Think of flash briefings as a cross between podcasts and Alexa skills. They're not as interactive as skills, but allow you to receive all the news you care about most.

Setup

- From your smart phone install and open your **Amazon Alexa** app  and then select the three bars in the upper left of the screen , then select **"Settings"** at the bottom of the menu.
- Scroll down until you see **"Flash Briefing"** and select it.
- Click on **"Add content"**. From there, there will be hundreds of different sources listed, including horoscopes, local and national news, and professional advice. You can also use the search (at the top of the screen) to locate specific sources/services.
- Simply click on a service you want and click the "Enable to use" button. You will now see the service in your "Flash Briefing" services. Please note that the order you see in your Flash Briefing services is the order they will play once you say **"Smart Mirror, what's up?"**
- To change the order of your Flash briefings, simply click on "Edit" (upper right) and drag and drop each service to your desired order by selecting the "=" to the right of each service.
- To listen to your flash briefings, simply say **"Smart Mirror, what's up?"** or **"Smart Mirror, What's my Flash Briefing?"** or **"Smart Mirror, What's the news?"**

You can have as many or as few flash briefings as you prefer (example below):

(OPTIONAL) Cast YouTube Videos From Your SmartPhone (<1 minute) – Cast YouTube videos, pictures, or other videos from your smartphone to your smart mirror!

- Select a YouTube video from your Apple or Android smartphone and select the cast button/icon in your YouTube app  (upper right). You will see your Smart Mirror under “[yourname]Pi4”. Select it and your YouTube video will cast to your Smart Mirror.

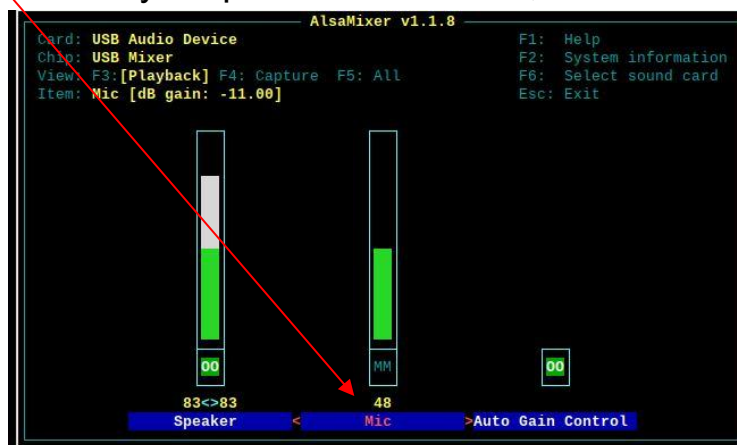

(OPTIONAL) Play Spotify On Your Smart Mirror from PC or SmartPhone (<1 minute)

- Select the Spotify app from your Apple or Android smartphone and select “devices” in your Spotify app (bottom left). You will see your Smart Mirror under “[yourname]Pi”. Select it and your Spotify music will begin playing on your Smart Mirror.

(OPTIONAL) Adjusting the Wakeword Sensitivity- “Smart Mirror” (<1 Minute)

If you are getting too many wakeword false positives or if your Smart Mirror is having trouble waking up with the “Smart Mirror” wakeword, simply adjust the microphone input:

1. Select "Ctrl" & "m" on your keyboard to minimize the Magic Mirror window
2. From your command prompt  (in the upper left of the toolbar in the desktop), Enter or paste: `alsamixer -c 1`
3. Right arrow so “Mic” is selected and use the up/down arrow keys to change mic sensitivity
4. After you have selected your preferred mic level, enter the “Esc” key

(REQUIRED) SETTING UP THE CONFIGURATION FILE ([config.js](#))

In the config.js file you can add or remove modules or adjust any modules that appear on the MagicMirror screen (detailed links below). This is also where you will add the API keys outlined in the next sections.

If you would like to learn how to set up your own modules or make adjustments to the screen layout, visit the how to setup modules instructions for beginners (*don't forget to scroll down the page of each module to verify if there are any "npm install" dependencies*):

<https://forum.magicmirror.builders/topic/4231/how-to-add-modules-for-absolute-beginners>

- The config.js file is located here:
- **[/home/pi/MagicMirror/config](#)**
- Open "config.js"

The full list of available modules can be located by clicking here:

<https://github.com/MichMich/MagicMirror/wiki/3rd-Party-Modules#3rd-party-modules>

Not all modules require an API key and not all modules are required for setup. For modules that do require an API key, some API keys require entry of a business name or phone number and you can simply fill in a link such [www.acme.com](#) for a business and phone number, such as 555-555-5555.

(OPTIONAL) Google Assistant - Home Mini Add-On Setup (<5 Minutes)

- Download and run the Google Home  app from your smartphone or tablet and select "Set up 1 device" and follow the onscreen instructions.
- The wakeword for Google Assistant is "Hey Google" or "OK Google"

(OPTIONAL) Google Chromecast Add-On Setup (<5 Minutes)

If you have the optional Google Chromecast installed, simply open your Google Home app in your smartphone  and select "Set up 1 device" and follow the onscreen instructions.

(OPTIONAL) Weather forecast API (MMM-BMW-CC) (<5 Minutes)

Displays your local weather forecast

- Requires a free API Key
- Follow the instructions below to obtain your free API key.
- While holding down the "Ctrl" key, click this link: <https://www.climacell.co/weather-api/pricing/>

1. Sign up for a free account 2. Fill out your info (use any company name and title)

Check out our weather API

Your Key
..... **Copy**

4. After clicking "Verify Email", you will need to sign into your new account. 5. Copy your key for the next step.

6. Open the **config.js** file – click on the file cabinet icon at the top left of the desktop screen navigate to **"/home/pi/MagicMirror/config"** and double click the **"config.js"** file.

7. Once opened, scroll down in the **config.js** file until you find the **MMM-BMW-CC** and **MMM-Climacell-Hourly** modules. If you do not wish to use this module, simply change "disabled: false" to "disabled: true". Paste your keys here, in between the quotes (use the same key for both).

```
disabled: false,  
module: "MMM-BMW-CC",  
position: "top_bar", // designed for bottom_bar(best) thirds should be good too  
config: {  
  apiKey: "INSERT KEY HERE"
```

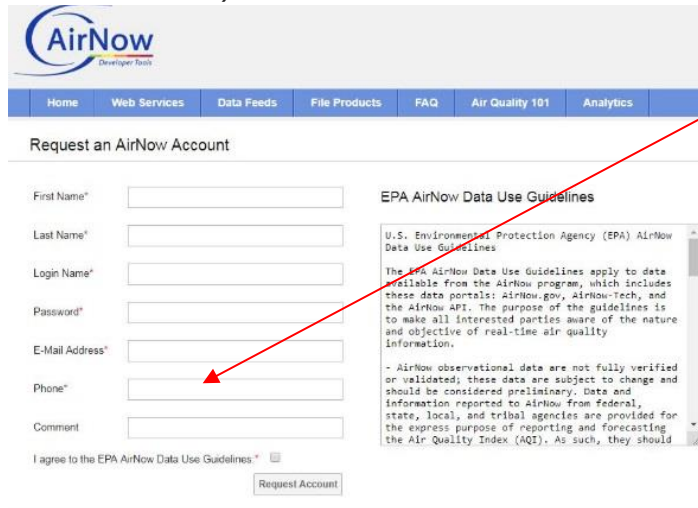

```
disabled: false,  
module: "MMM-Climacell-Hourly",  
position: "bottom_bar", // designed for bottom_bar(best) thirds should be good too  
config: {  
  apiKey: "INSERT KEY HERE",
```

8. Save the config.js file by clicking on “File” and “Save” (upper left in menu). Once you save the config.js file, you will need to select “Ctrl” & “q” on the keyboard in the MagicMirror window in order for the changes to take effect and the module will be displayed.

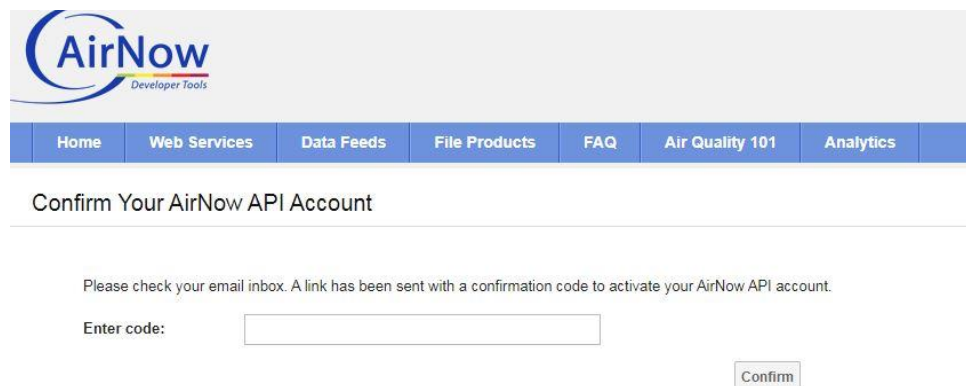

(OPTIONAL) Air quality (MMM-AirNow) (<5 Minutes)

Displays the air quality in your area

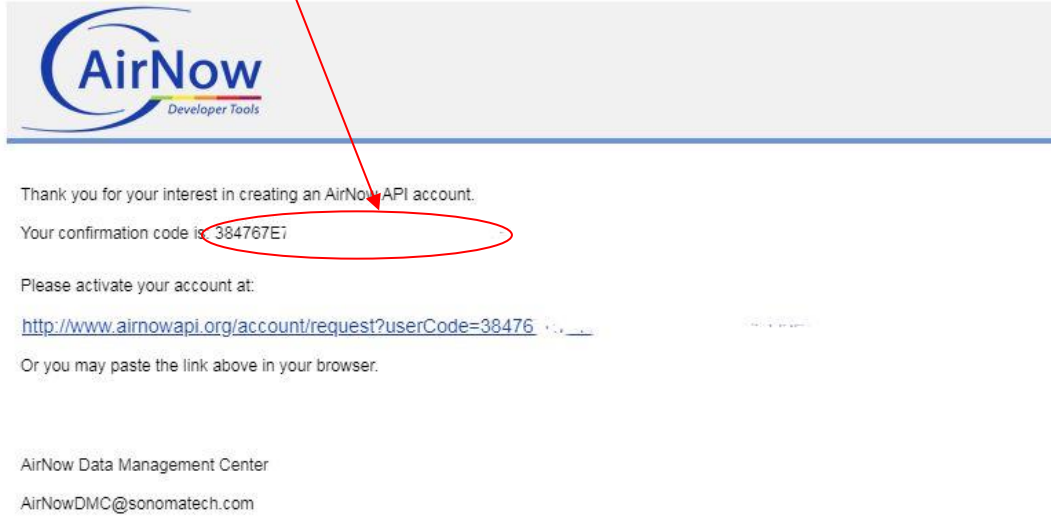

1. Click on the following link to sign up: <https://docs.airnowapi.org/account/request/>
2. Create an account. You can include any name and phone number (i.e. 44444444444)

3. After you request an AirNow account, you will receive your confirmation (API) code in your email.

4. Open your email to and locate the email from AirNow. Your key is the confirmation code. Copy this code for the next step.

5. Click on the file cabinet icon at the top left of the desktop screen  navigate to **"/home/pi/MagicMirror/config"** and double click the **"config.js"** file.

6. Once opened, scroll down in the **config.js** file until you find the **MMM-AirNow** module. If you do not wish to use this module, simply change "disabled: false" to "disabled: true". Paste your key here, in between the quotes.

```
disabled: false,  
module: 'MMM-AirNow',  
position: 'top_left',  
header: 'Current Air Quality',  
config: {  
  api_key: 'INSERT KEY',  
  zip_code: '15143'
```

7. Save the config.js file by clicking on "File" and "Save" (upper left in menu). Once you save the config.js file, you will need to select "Ctrl" & "q" on the keyboard in the MagicMirror window in order for the changes to take effect and the module will be displayed.

(OPTIONAL) AVS Stock Quote API Key (MMM-AVStock) (<5 Minutes)

Displays your stock quotes in the center of your smart mirror! (Replaces MMM-iFrame and MMM-CalendarExt2)

- Get your key here: <https://www.alphavantage.co/support/#api-key>

1. Fill out the form 2. Click "GET FREE API KEY" 3. Your free key will appear here

Last updated: 05-03 14:24

Welcome to Alpha Vantage! Your dedicated access key is: K9SLHRI957. Please record this API key for future access to Alpha Vantage.

4. Copy your key and open the **config.js** file. Scroll down in the **config.js** file until you find the **MMM-AVStock** module. Change "disabled: true" to "disabled: false". Paste your key here, in between the quotes. Change the stock tickers to those you want to follow.

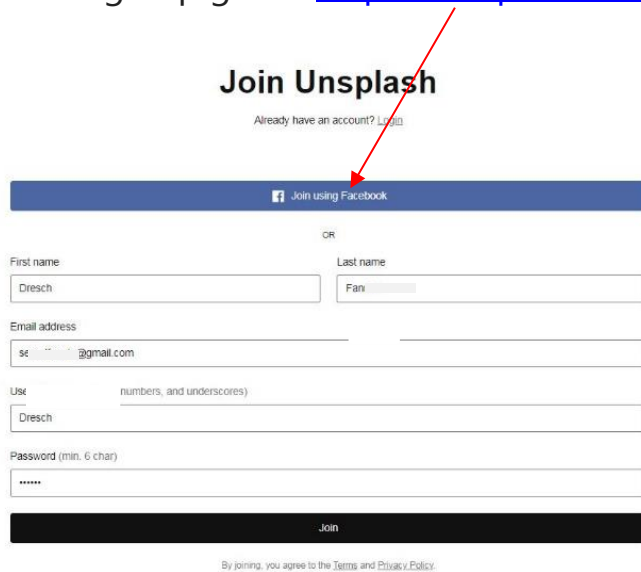

```
disabled: true,  
module: "MMM-AVStock",  
position: "middle_center",  
config: {  
  apiKey : "INSERT KEY", //See Page 12 of Initial Setup Instructions "AVS STOCK" OR GO TO  
  https://www.alphavantage.co/support/#api-key to sign up  
  decimals: 2,  
  symbols : ["LTC-USD", "SPY", "VTSAX", "TSLA", "PTON", "BYND"],
```

5. Save the config.js file by clicking on "File" and "Save" (upper left in menu). Once you save the config.js file, you will need to select "Ctrl" & "q" on the keyboard in the MagicMirror window in order for the changes to take effect and the module will be displayed.

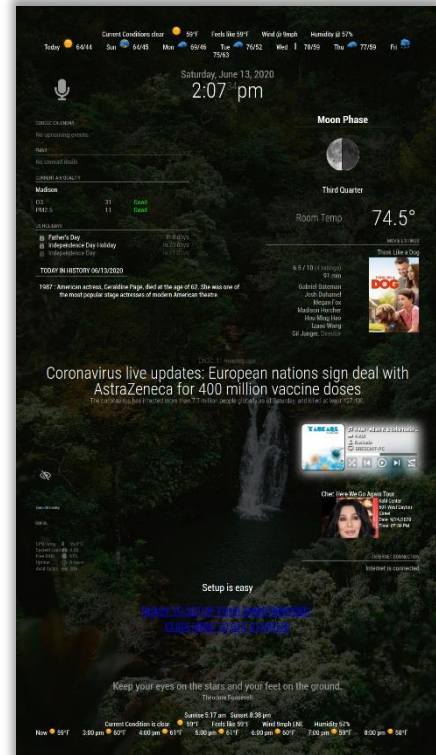

(OPTIONAL) Unsplash Background Image (MMM-Unsplash) (<10 Minutes)

Rotate high-quality background images from an unlimited number of categories and collections

1. To sign up go to: <https://unsplash.com/join>

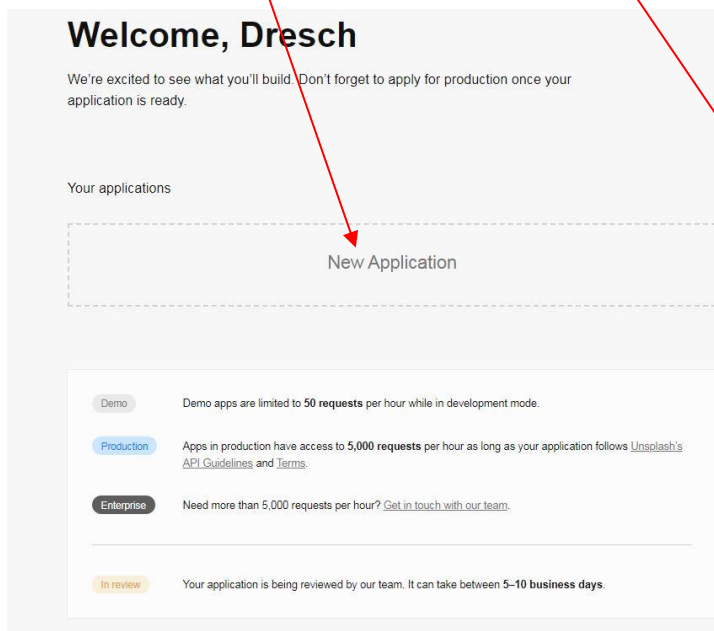

The image shows the 'Join Unsplash' form. At the top, it says 'Join Unsplash' with a link 'Already have an account? Log in'. Below this is a blue button 'Join using Facebook'. Underneath is a 'OR' separator. The form has fields for 'First name' (filled with 'Dresch'), 'Last name' (filled with 'Farr'), 'Email address' (filled with 'dresch@gmail.com'), 'Use' (filled with 'numbers, and underscores'), and 'Password' (min. 6 char, filled with '*****'). A 'Join' button is at the bottom. A red arrow points from the text 'To sign up go to: https://unsplash.com/join' to the 'Join using Facebook' button.

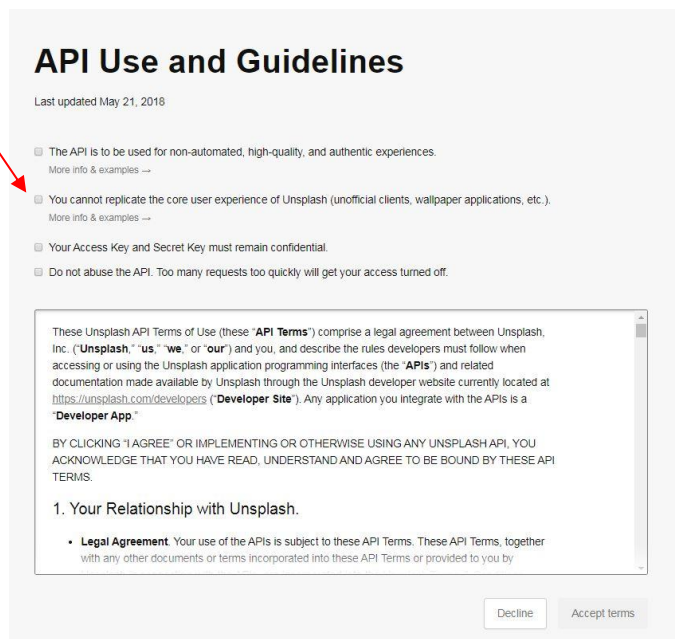

2. After signing up, click this link to go to: <https://unsplash.com/oauth/applications>

3. Select "New Application" and accept all terms

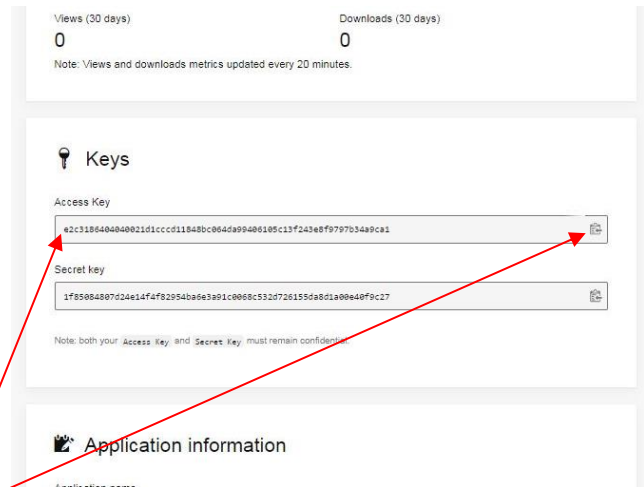

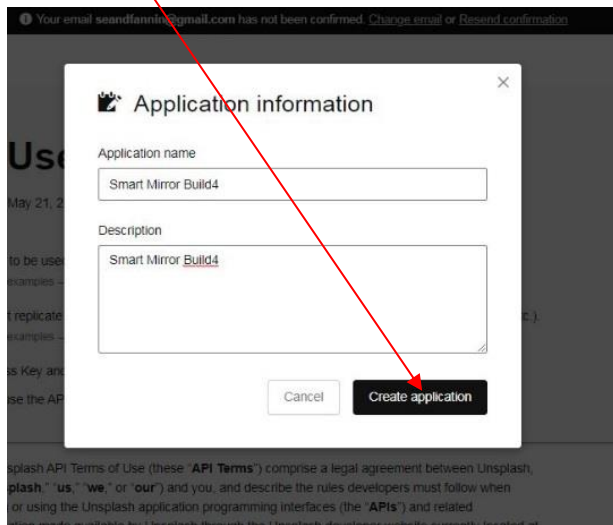

The image shows the 'Welcome, Dresch' page. It has a heading 'Welcome, Dresch' and a subheading 'We're excited to see what you'll build. Don't forget to apply for production once your application is ready.' Below this is a section 'Your applications' with a dashed box containing the text 'New Application'. At the bottom, there are three tabs: 'Demo' (selected), 'Production', and 'Enterprise'. The 'Demo' tab shows 'Demo apps are limited to 50 requests per hour while in development mode.' The 'Production' tab shows 'Apps in production have access to 5,000 requests per hour as long as your application follows Unsplash's API Guidelines and Terms.' The 'Enterprise' tab shows 'Need more than 5,000 requests per hour? Get in touch with our team.' A red arrow points from the text 'Select "New Application" and accept all terms' to the 'New Application' button.

The image shows the 'API Use and Guidelines' page. It has a heading 'API Use and Guidelines' and a subheading 'Last updated May 21, 2018'. Below this is a list of guidelines: 'The API is to be used for non-automated, high-quality, and authentic experiences.', 'You cannot replicate the core user experience of Unsplash (unofficial clients, wallpaper applications, etc.)', 'Your Access Key and Secret Key must remain confidential.', and 'Do not abuse the API. Too many requests too quickly will get your access turned off.' At the bottom, there is a 'Decline' button and an 'Accept terms' button. A red arrow points from the text 'Select "New Application" and accept all terms' to the 'Accept terms' button.

4. Indicate any application name and description you want and select "Create Application"

6. After creating the application, your Access key will be located about halfway down the page.

7. Copy your key and open the **config.js** file (**/home/pi/MagicMirror/config**). Scroll down in the **config.js** file until you find the **MMM-Unsplash** module. Paste your key here, in between the quotes. Include your favorite collections from Unsplash to use as background images. To learn how to create your own collections of the images, visit <https://help.unsplash.com/en/articles/2534416-create-a-collection>. Collection ID's are sets of 7-digit numbers that identify each collection (i.e. 'maui', 'shopping', etc) and appear in the Chrome address bar after searching and clicking on a collection (i.e. <https://unsplash.com/collections/8998537/maui>).

```
disabled: false,  
module: 'MMM-Unsplash',  
position: 'fullscreen_below',  
config: {  
  opacity: .4, // This changes the opacity of the background image from "0" = Dark/No Image to ".9" -  
  // Full Image Brightness  
  width: 1500,  
  height: 2500,  
  orientation: 'portrait',  
  updateInterval: 120, // rotates image every 2-minutes  
  collections: '8041221,1871195,1550989,4600943,6810006,4354938,2373141,8998537', //  
  apiKey: 'Insert_Access_Key' // See Page 11 of Initial Setup Instructions "Unsplash"  
}
```

8. Save the config.js file by clicking on "File" and "Save" (upper left in menu). Once you save the config.js file, you will need to select "Ctrl" & "q" on the keyboard in the MagicMirror window in order for the changes to take effect and the module will be displayed.

(OPTIONAL) Google Calendar Setup (<5 Minutes)

See upcoming events in your Google calendar

1. Click this link and sign in to your Google account: <https://calendar.google.com>
2. On the left side, mouse over the three dots next to your name and left click your mouse to open the options menu and select “**settings and sharing**”

3. In the settings menu, scroll down to the bottom of the page until you see “**Secret address in iCal format**”. Select the address and right click your mouse and select “**Copy**”.

Secret address in iCal format
<https://calendar.google.com/calendar/ical/sd%40hotmail.com/private-66a5caf7c5f1238l>

4. In the **config.js** file (**/home/pi/MagicMirror/config**), scroll down to the module named “calendar” (example below) or enter “Ctrl” & “f” from your keyboard and enter “calendar” to find the module.
5. Once you’ve located the **Google Calendar** module, copy and paste your private calendar address from step #3 above in the highlighted section below. If you do not wish to use this module, change “disabled: false” to “disabled: true”.

```
disabled: false,  
module: "calendar",  
header: "Google Calendar",  
position: 'top_center',  
config: {  
  
    timeFormat: 'absolute',  
    showEnd: false,  
    urgency: 2,  
    dateFormat: 'MMM Do',  
    fullDayEventDateFormat: 'MMM Do',  
    getRelative: 48,  
    maximumEntries: 3,  
    maximumNumberOfDays: 7,  
    calendars: [  
    {  
        symbol: 'calendar-check-o',  
        url: 'INSERT SECRET ICAL ADDRESS'  
    },  
    ]  
}
```

6. Save the config.js file by clicking on “File” and “Save” (upper left in menu). Once you save the config.js file, you will need to select “Ctrl” & “q” on the keyboard in the MagicMirror display window in order for the changes to take effect.

(OPTIONAL) Display E-Mail Alerts (MMM-Mail) (<5 Minutes)

Get email alerts displayed on your smart mirror

1. Select “Ctrl” + “m” on your keyboard
2. From the desktop, navigate to “/home/pi/MagicMirror/config” (using the file cabinet icon at the top left of the PI’s desktop screen)  and select the “**config.js**” file. Then scroll down and locate the “**MMM-Mail**” module in the file and change the parameters highlighted below. If you do not wish to use this module, change “disabled: false” to disabled: true” (example below). You will need to locate your port number from your email settings.

```
{
  disabled: false,
  module: 'MMM-Mail',
  position: 'top_right',
  header: 'Email',
  config: {
    user: 'johndoe@gmail.com', //Enter your email address
    pass: 'xxx', //Enter your password
    host: 'imap.gmail.com', //Enter host information
    port: 993, //Enter port number
    numberOfEmails: 5, //Number of emails to display
    fade: true,
    subjectlength: 50
  }
}
```

3. Then click “File” and “Save” to save the config.js file – open the Magic Mirror display and then select “Ctrl” & “q” on the keyboard to restart/reload Magic Mirror.

(OPTIONAL) Display Live Video Feeds (MMM-iFrame) (<5 Minutes)

Displays any live/streaming video feed in the center or your smart mirror! (Replaces MMM-AVS stock ticker and MMM-CalendarExt2)

1. Select “Ctrl” + “m” on your keyboard
2. From the desktop, navigate to “/home/pi/MagicMirror/config” (using the file cabinet icon at the top left of the PI’s desktop screen)  and select the “**config.js**” file. Then scroll down and locate the “**MMM-iFrame**” module in the file and change the parameters highlighted below. To enable this module, change “disabled: true” to disabled: false” (example below). You can add as many streaming URLs as you like and they will rotate at any interval timing you set.

```
{
  disabled: true, //*****CHANGE TO false TO SEE LIVE IMAGES OF DOWNTOWN CLAYTON*****
  module: 'MMM-iFrame',
  position: 'middle_center', // This can be any of the regions.
  config: {
    // See 'Configuration options' for more information.
    url:
    ["https://www.cache.wral.com/asset/weather/2020/02/13/18951319/clayton_downtown-DMID1-5na0ylj0d-640x480.jpg"], // as many URLs you want or you can just ["ENTER IN URL"] if single URL.
    updateInterval: 5 * 60 * 1000, // update URL every 5 minutes
  }
}
```

3. Then click “File” and “Save” to save the config.js file – open the Magic Mirror display and then select “Ctrl” & “q” on the keyboard to restart/reload Magic Mirror.

(OPTIONAL) Movie Listings API Key (MMM-MovieListings) (<10 Minutes)

Displays current movie listing ratings and descriptions

1. Sign up at <https://themoviedb.org/account/signup>

2. Check for and email from The Movie database and verify your account. Then you'll sign into your account.

API Details Directory Sessions Stats

TMDB offers a powerful API service that is free to use as long as you properly attribute us as the source of the data and/or images you use. You can find the logos for attribution [here](#).

Documentation

Our primary documentation is located at [developers.themoviedb.org](#).

Support

If you have questions or comments about the information covered here, please create a post on our [support forums](#).

API Details

If you'd like to edit the details of your app, [click here](#).

App Directory

Once you have completed your application, [add it](#) to the app directory.

API Key (v3 auth)

8d7756b61c1d5176c0ca32c

9. Once you've copied your key, open the **config.js** file (/home/pi/MagicMirror/config).

Scroll down in the **config.js** file until you find the **MMM-MovieListings** module. If you do not wish to use this module, change “disabled: false” to “disabled: true”. Paste your key here.

```
{
  disabled: false,
  module: 'MMM-MovieListings',
  position: 'top_right',
  config: {
    apiKey: 'INSERT KEY',
  }
}
```

10. Save the config.js file by clicking on “File” and “Save” (upper left in menu). Once you save the config.js file, you will need to select “Ctrl” & “q” on the keyboard in the MagicMirror window in order for the changes to take effect and the module will be displayed.

(OPTIONAL) Monthly Calendar (MMM-CalendarExt2) (<5 Minutes)

See your monthly calendar with holidays and appointments for the month in the center of your screen! (Replaces MMM-AVS stock ticker and MMM-iFrame)

Scroll down in the **config.js** file until you find the **MMM-CalendarExt2** module. Change “disabled: true” to “disabled: false”. Insert your Google Calendar private ical address here ([see page 15](#) in this guide to get the link).

```
{
  disabled: true, //***** CHANGE true TO false FOR MONTHLY CALENDAR
  module: 'MMM-CalendarExt2',
  ...
  {
    name : "Schedule",
    //icon: "noto-soccer-ball",
    url: "INSERT_YOUR_PRIVATE_ical Address", // See Page 15 of Setup Instructions - "Google Calendar Setup"
  },
}
```

(OPTIONAL) Events API (MMM-Events) – Eventful (<10 Minutes)

- **Upcoming events in your city. Concerts, Performances, Comedy Shows, Sporting Events, Theatre, Exhibits, Art Galleries, Museums, Festivals, Food & Drink and many more.**

1. Goto: <http://eventful.com/join?goto=http%3A%2F%2Fapi.eventful.com%2Fkeys/>
2. Sign up using your Facebook account by clicking the blue "SIGN UP WITH FACEBOOK" link at the top of the page
3. Click this link - "Request an application key"
4. Fill in the information to obtain an API key. You can enter any first/last name, phone number, company name, mailing address, and application website (i.e. www.acme.com). Then select "Request key"

eventful

Request an Application Key

To start developing with the Eventful API, let us know a little about yourself and your application.

Personal information

First name * Derek
Last name * Smith
Email address * derek@acme.com
Title/Role
Company name * acme

[edit details] [remove key] [log out/auth consumer]

5. Copy this key and open the **config.js** file (**/home/pi/MagicMirror/config**). Scroll down in the **config.js** file until you find the **MMM-Events** module. If you do not wish to use this module, change "disabled: false" to "disabled: true". Paste your key here. Choose from a wide variety of events-(**see complete list on next page**)

```
disabled: false,
module: 'MMM-Events',
position: 'bottom_right',
config: {
  city: "Madison", // Your City
  eventType: "sports_football,sports_hockey,food_beer,food_wine,music_rock,music_country", //
  when: "Future", // "All", "Future", "Past", "Today", "Last Week", "This Week", "Next week", and
  months by name, e.g. "October"
  mode: "noFrame", // "Frame" or "noFrame" (around picture)
  apikey: "INSERT KEY",
```

6. Save the config.js file by clicking on "File" and "Save" (upper left in menu). Once you save the config.js file, you will need to select "Ctrl" & "q" on the keyboard in the MagicMirror window in order for the changes to take effect and the module will be displayed.

(OPTIONAL) Spotify Module (MMM-Spotify) (<10 Minutes) –

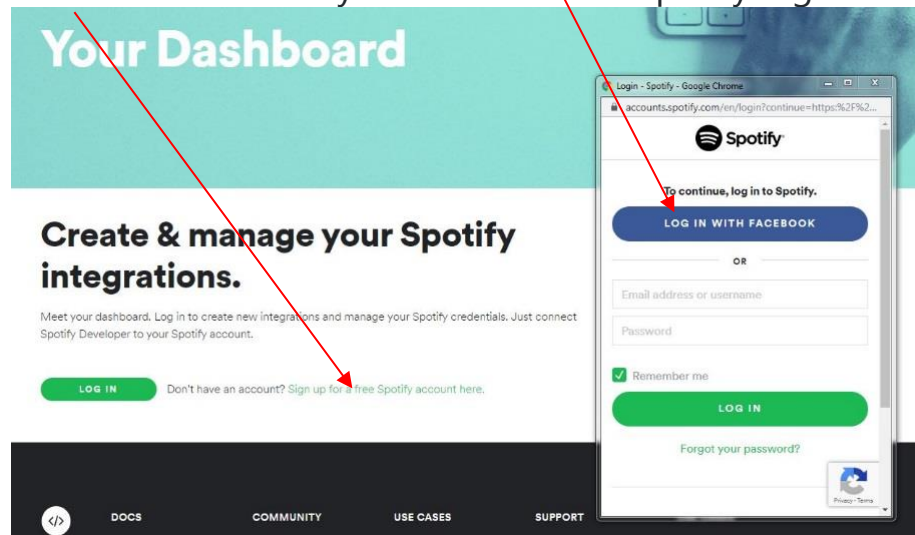

See what Spotify song is playing your Smart Mirror

1. Sign up for a free Spotify developer account at:

<https://developer.spotify.com/dashboard/login>

Sign up for a new account and use your Facebook or Spotify login credentials

2. Click on "Create a Client ID" and include the app name such as "**Spotify Mirror**" and description "**Smart mirror Spotify integration**" click on "**Voice Other**" and click "**Next**"

CREATE AN APP OR HARDWARE INTEGRATION
Step 1/3

App or Hardware Name *
Smart Mirror Spotify

App or Hardware Description *
Smart mirror integration with Spotify

What are you building? *

- ☐ I don't know
- ☐ Mobile App
- ☐ Desktop App
- ☐ Website
- ☐ Speakers
- ☐ Voice - Cortana
- ☒ Voice - Other
- ☐ TV
- ☐ Gaming Consoles
- ☐ Wearables

Check all that apply

NEXT

- "Are you developing a commercial integration", click "**No**"

CREATE AN APP OR HARDWARE INTEGRATION
Step 2/3

Are you developing a commercial integration?

Generally speaking, you have a commercial integration if you are incorporated and/or plan to monetize your app.

What does that mean?

- **You monetize if...** your app or product charges a fee to purchase, promotes using ads or utilizes a freemium model for upsells.
- **You are incorporated if...** you are legally protected as a corporate entity or company.

Note: Please note that using Spotify's tools are always subject to our [Developer Terms of Service](#) and final approvals for commercial usage will always be left up to the discretion of Spotify and its partners.

NO YES

3. Agree to all conditions and click "**Submit**"

CREATE A NON-COMMERCIAL APP
Step 3/3

- ☒ I understand that this app is not for commercial use
- ☒ I understand that I cannot migrate my app from non-commercial to commercial without permission
- ☒ I understand and agree with Spotify's Developer Terms of Service, Branding Guidelines, and Privacy Policy

SUBMIT CANCEL

4. Click on the **"Edit Settings"** button in the upper right.

5. Under **"Redirect URIs"** and add the link below and then click **"Save"**:

<http://localhost:8888/callback>

The screenshot shows the 'EDIT SETTINGS' dialog box for an application named 'Smart Mirror Spotify'. The dialog has several sections: 'Application name' (Smart Mirror Spotify), 'Application description' (Smart mirror integration with Spotify), 'Website' (Add a website), 'Redirect URIs' (https://example.com/callback/), 'Bundle IDs' (com.example.myapplication), and 'Android Packages' (com.example.myapplication). At the bottom, there are three buttons: 'SAVE' (green), 'CANCEL' (grey), and 'DELETE' (red). Red arrows point from the instructions to the 'EDIT SETTINGS' button in the top right, the 'ADD' button next to the 'Redirect URIs' list, and the 'SAVE' button at the bottom.

6. Copy and paste the **Client ID** and **Client Secret** into a file for the next step

The screenshot shows the 'Smart Mirror Spotify' settings page. It displays the 'Client ID' as '0a3b474801ea4df0a37' and the 'Client Secret' as 'b108ef3d8e4648678d'. There is a 'RESET' button next to the 'Client Secret' and a 'HIDE CLIENT SECRET' button below it. Red arrows point from the instructions to the 'Client ID' and 'Client Secret' fields.

7. From the file menu in the Pi desktop , navigate to: **/home/pi/MagicMirror/modules/MMM-Spotify** and open the file **"spotify.config.json"**.

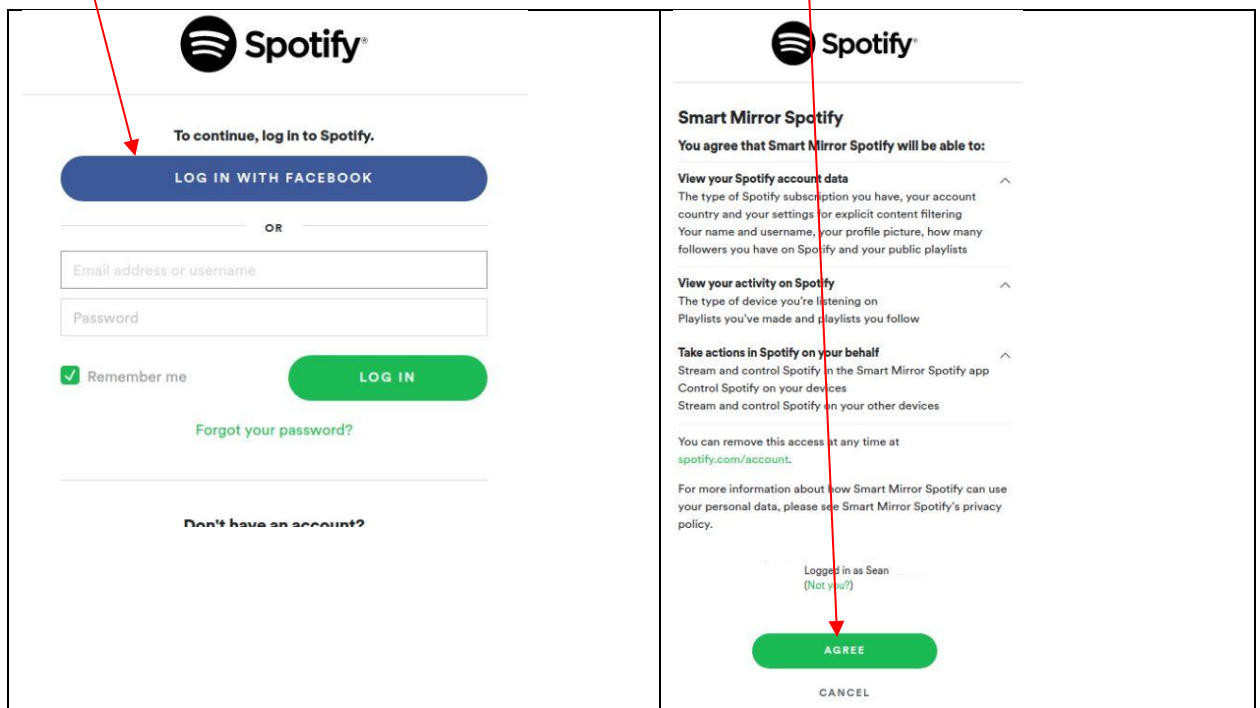

8. Paste your **Client ID** and **Client Secret**. Then, save the file.

```
{
  "CLIENT_ID" : "YOUR_CLIENT_ID",
  "CLIENT_SECRET" : "YOUR_CLIENT_SECRET",
  "AUTH_DOMAIN" : "http://localhost",
  "AUTH_PATH" : "/callback",
  "AUTH_PORT" : "8888",
  "SCOPE" : "user-read-private playlist-read-private streaming user-read-playback-state user-modify-playback-state",
  "TOKEN" : "./token.json"
}
```

9 Authorize your app and receive a token: From the command prompt (in the upper left of the toolbar in the Pi desktop ) ,
enter: **cd ~/MagicMirror/modules/MMM-Spotify**
- then enter: **node first_auth.js**

10. You will then be automatically be taken to the Spotify website. Sign in again.

-Agree to the terms

11. If authorization is successful, you will see the message below. You can now close the chrome browser.

← → ↻ ⓘ localhost:8888/callback?code=AQDS
./token.json would be created. Check it.

(OPTIONAL) Playing Music From Your Connected Sonos Speaker (<1 minute)

- To use your connected Sonos speaker with your smart mirror, open your Amazon Alexa app and ask Alexa to “Discover Devices” and it should automatically locate your Sonos speaker. If Alexa does not locate your Sonos speaker, select “Devices” on the bottom right of the home screen, then select the “+” in the top right of the screen, then select “Add device” and scroll down until you can select “Speaker” and “Sonos”.
- You will see the song and album cover playing on your smart mirror display. You can also raise or lower the volume simply by saying “Smart Mirror” → “Raise volume” or “Lower volume” or “Mute” on “YOUR_ROOM”.

(OPTIONAL) SmartThings (MMM-Smartthings) (<5 minutes)

Connects to the Samsung/Smartthings api to display your device status information.

1. Log into the developer site with your SmartThings or Samsung Account and generate a personal token by clicking here: <https://account.smartthings.com/tokens>
2. After logging in, click “Generate Token”. Then select all boxes and click “Generate Token” at the bottom of the screen.
3. Open the **config.js** file (**/home/pi/MagicMirror/config**). Scroll down in the **config.js** file until you find the **MMM-Smartthings** module.
4. Copy and paste your token here and change “disabled: true” to “disabled: false”
5. Capabilities: A complete list can be found here: <https://docs.smartthings.com/en/latest/capabilities-reference.html>

```
{
  disabled: true,
  module: "MMM-Smartthings",
  position: "top_left",
  header: "Smartthings",
  config: {
    personalAccessToken: 'INSERT_YOUR_TOKEN',
    capabilities: [
      'contactSensor', //EXAMPLE ONLY
      'lock' //EXAMPLE ONLY
    ],
  },
},
```

6. Save the config.js file by clicking on “File” and “Save” (upper left in menu). Once you save the config.js file, you will need to select “Ctrl” & “q” on the keyboard in the MagicMirror window in order for the changes to take effect and the module will be displayed.

OPTIONAL) Ring Camera (MMM-Ring) (<5 minutes)

Whenever someone presses the button on your Ring device, or when motion is detected, the Ring video stream will appear in the middle of your display for roughly 2 minutes. Whenever there is no video being displayed, nothing else is shown in its place.

1. From the command prompt , enter: `cd MagicMirror/modules/MMM-Ring/`
2. Then paste or type in the following command: `npx -p ring-client-api ring-auth-cli`
3. After the program runs, enter the email address and password that you used to sign up for your Ring account.
4. Check your email for your 2fa code from Ring and enter the code here.

```
pi@JeffreyPi4: ~/MagicMirror/modules/MMM-Ring
```

```
File Edit Tabs Help
```

```
pi@JeffreyPi4:~$ cd MagicMirror/modules/MMM-Ring/
pi@JeffreyPi4:~/MagicMirror/modules/MMM-Ring$ npx -p ring-client-api ring-auth-cli

This CLI will provide you with a refresh token which you can use to configure ring-client-api and homebridge-ring.
Email: sd @hotmail.com
Password: df
Ring 2fa or verification code is enabled. Please enter code from the text/email.
2fa Code: 325412
Successfully logged in to Ring. Please add the following to your config:
{"refreshToken": "eyJhbGciOiJIUzUxMiIsImprdiSI6IiwiaXNjaWVudCkiOiJmYXZlbnRlcmlzLnR5b2lkIiwicmVmcmVzaF9zY29wZXMiOiJ2xpZW50Il0sInJlZnJlc2hfdXNlc19pZCI6MzUyOTcwNDMsInJuZCI6IlFDcjdlWR3RMmB3NMkzMjIiwic2Vzc2lvbi9pZCI6ImVjNjc5ODZkdLTlyNWNYWNdc4ZC04ZDJjLTNTNmYxODk5MzZmOClzInR5cGUoiOiJyZWZyZXNoLXRva2VuIn0u.n9z35pirJfeoVotFhQwZvHbQmYisScamD4r-NZbRTUM6wNJ0nk0zPXdk_zVZ6w8sUo1Yi0TXkExAqd6pwN-1dRg"}
pi@JeffreyPi4:~/MagicMirror/modules/MMM-Ring$
```

5. If everything is entered correctly, you will see this message.
6. Copy the entire "RefreshToken" – **IMPORTANT** - when copying, be sure to leave off the quotes on either end of the token

7. Open the **config.js** file (/home/pi/MagicMirror/config).

8. Scroll down in the **config.js** file until you find the **MMM-Ring** module.

9. Paste your token here. – **IMPORTANT** - when pasting your token, be sure to paste inside the quotes with no extra spaces.

```
{
  disabled: false,
  module: "MMM-Ring",
  position: "middle_center",
  config: {
    ring2faRefreshToken: "xxxxxxxxxxxxxxxxxxxxxxxxdS16I9vYXV0aC9pbnRlcm5hbC9qd2tzIiwia2lkIjoizGVmYXVs
dCIzInR5cCI6IkpXVCJ9.eyJpYXQiOiJlOTU4NzI0OTksInJlcnJlc2hfY2lkIjoicmluZ19vZmZpY2lhbF9hbmRyb2lkIi
wiczVmcmVzaF9zY29wZXMiOiY2xpZW50I0sInJlcnJlc2hfdXNlcl9pZCI6MzUyOTUwNDMsInJuZCI6Ilxxxxxx
xxxxxxxxxxxxxxxx",
    ringMinutesToStreamVideo: 1.5, //Minutes to stream video after motion or button trigger
    ringVideoWidth: 600, //in px - resize the streaming video window
    ringStreamMotion: true //trigger streaming video after motion (in addition to pushing the button)
  }
},
```

10. Save the config.js file by clicking on “File” and “Save” (upper left in menu). Once you save the config.js file, you will need to select “Ctrl” & “q” on the keyboard in the MagicMirror window in order for the changes to take effect and the Ring feed will be displayed on motion activation.

11. Verify that your token was added to your MMM-Ring module by going to folder /home/pi/MagicMirror/modules/MMM-Ring and open the “.env” file. If you see long string of characters and letters after “RING_2FA_REFRESH_TOKEN=” then your token was successfully added. If it is blank after the “RING_2FA_REFRESH_TOKEN=”, then DELETE the “.env” file and start over at step 1 above until you can see the token in the “.env” file.

nest (OPTIONAL) Nest Camera (<5 minutes)

Display live streaming video feed from your Nest camera.

1. Open the **config.js** file (/home/pi/MagicMirror/config). Scroll down in the **config.js** file until you find the **MMM-iFrame//For Nest** module.

2. Change “disabled: true” to “disabled: false”

3. After logging in to your Nest account find your live video feed unique code and paste it here.

```
{
  module: 'MMM-iFrame', //For Nest
  disabled: true,
  position: 'middle_center',
  header: '',
  config: {
    url: [
      'https://video.nest.com/embedded/live/INSERT_UNIQUE_VIDEOSTREAM_CODE'
    ],
    updateInterval: 600000,
    width: '850px',
    height: '475px'
  }
},
```

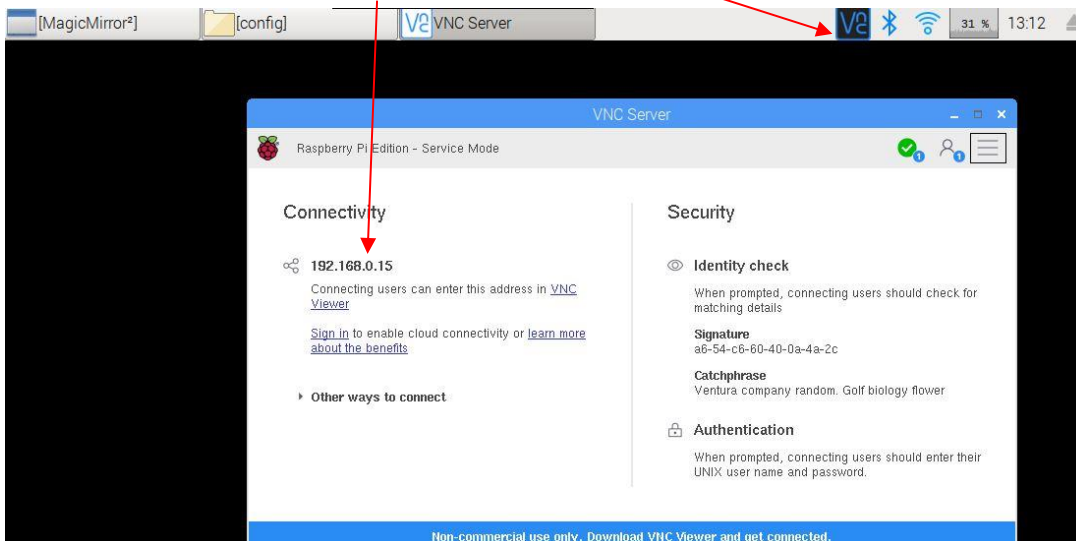

(iOS/Apples Users Only - OPTIONAL) Homebridge and Homekit Integration (<5 minutes)

With Homebridge you can connect almost any IoT or smart home device to Apple's Home app, regardless if it is Apple or Homekit compatible. What is Homekit? Homekit is Apple's smart home app that allows you to control and monitor all of your smart home and IoT devices from one device, such as an iPhone and there is no additional bridge or hub required.

1. From the Pi desktop click on the VNC icon

2. Your Pi IP address **here** ****PLEASE WRITE DOWN YOUR IP ADDRESS FOR NEXT STEP****

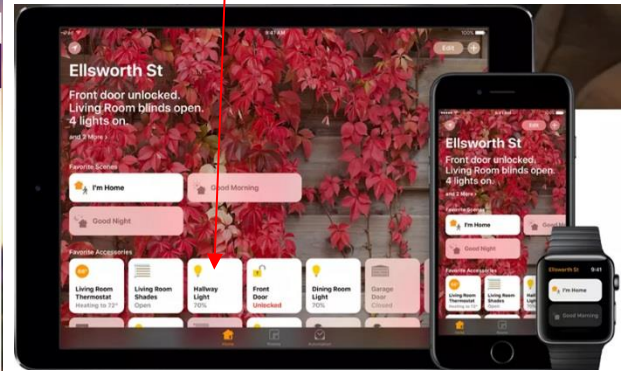

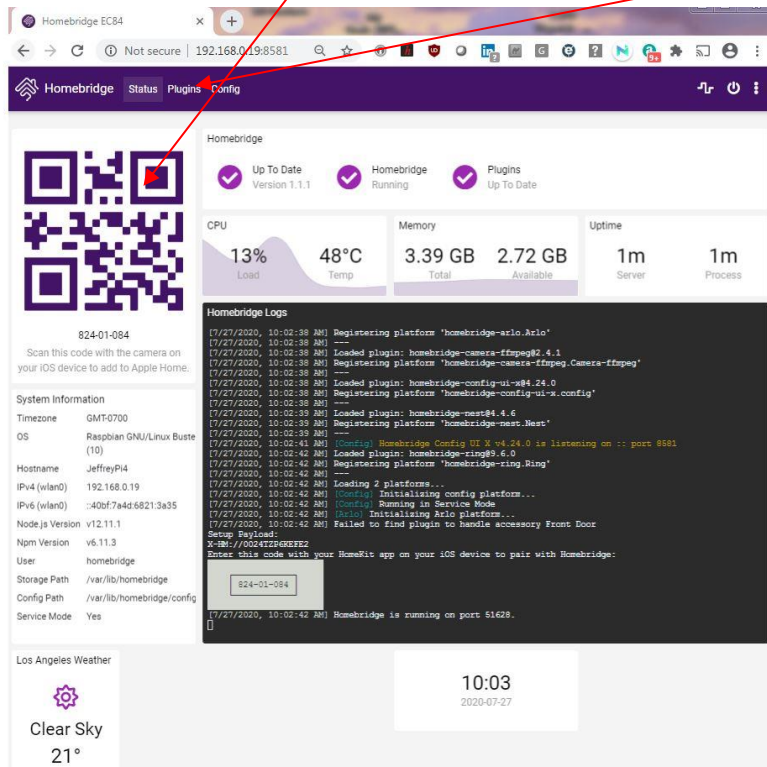

3. From your Pi's Chrome browser or Safari on your iPad or iPhone, in the address bar, enter: [YOUR_IP_ADDRESS FROM STEP 2 ABOVE:8581] – Example below

4. You will then see the Homebridge interface (example below). From your iOS, iPhone, or iPad device, select the “Home” app and tap the “+” symbol and “Add Accessory”

5. Scan the onscreen QRI code. You should now see all of the Plugins loaded into your Home app.

6. Optionally, you can add new plugins by selecting “Plugins” by searching for your desired plugin

7. For more information about Homebridge, please visit: <https://github.com/homebridge/homebridge>

LAST STEP! DISABLE THE ON-SCREEN SETUP MESSAGE

Once you've finished setup, open the config.js file and change the following modules from 'disabled: false' to 'disabled: true'

```
{
  disabled: false, //*****CHANGE TO true ONCE SETUP IS COMPLETE*****
  module: "compliments",
  position: "bottom_bar",
  updateInterval: 3000,
  classes: "small",
  config: {
    anytime: [
      "Your Smart Mirror, Your Way",
      "Setup is easy",
      "Click on the link below to get started"
    ],
  },
},
{
  disabled: false, //*****CHANGE TO true ONCE SETUP IS COMPLETE*****
  module: "MMM-HTMLBox",
  position: "bottom_bar",
  config: {
    width: "100%",
    height: "200px",
    refresh_interval_sec: 0,
    content: "<a href='\"https://electrotherapydesigns.com/pages/smart-mirror-setup-1/\"'>READY TO SETUP YOUR SMARTMIRROR? <BR>CLICK HERE TO GET STARTED!</a>",
    // content: "<iframe src='\"https://electrotherapydesigns.com/pages/smart-mirror-setup/\"'></iframe>",
    file: "", //When content is too long, you can use this for external file. relative path from `MMM-HTMLBox`
  },
},
```

   **SETUP COMPLETE!**   

HOW TO USE SCHEDULER MODULES

<https://github.com/ianperrin/MMM-ModuleScheduler>

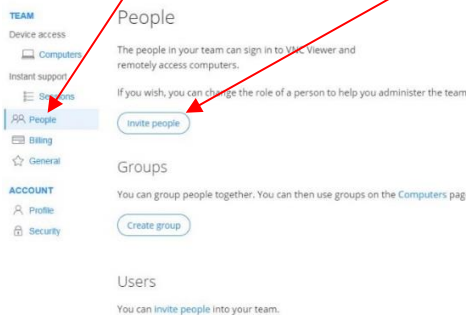

The scheduler keeps the screen and modules refreshed and is set to reboot daily. To change the time of the reboot and restart, open the config folder in: **/home/pi/MagicMirror/config** and then open the **"config.js"** file and change the values highlighted below. Please note that 7am is '0 7....' and uses a 24-hour time period.

```
{
  module: 'MMM-ModuleScheduler',
  config: {
    notification_schedule: [
      // TURN THE MONITOR/SCREEN OFF AT 12:30 AM EVERY DAY
      {notification: 'REMOTE_ACTION', schedule: '30 0 * * *', payload: {action: "MONITOROFF"}},
      // TURN THE MONITOR/SCREEN ON AT 7:00 EVERY DAY
      {notification: 'REMOTE_ACTION', schedule: '0 7 * * *', payload: {action: "MONITORON"}},
      // REBOOT THE RASPBERRY PI AT 6am EVERY DAY
      {notification: 'REMOTE_ACTION', schedule: '0 6 * * *', payload: {action: "REBOOT"}},
      // RESTART THE MAGICMIRROR PROCESS AT 6:05am EVERY DAY
      {notification: 'REMOTE_ACTION', schedule: '5 6 * * *', payload: {action: "RESTART"}}
    ]
  },
},
```

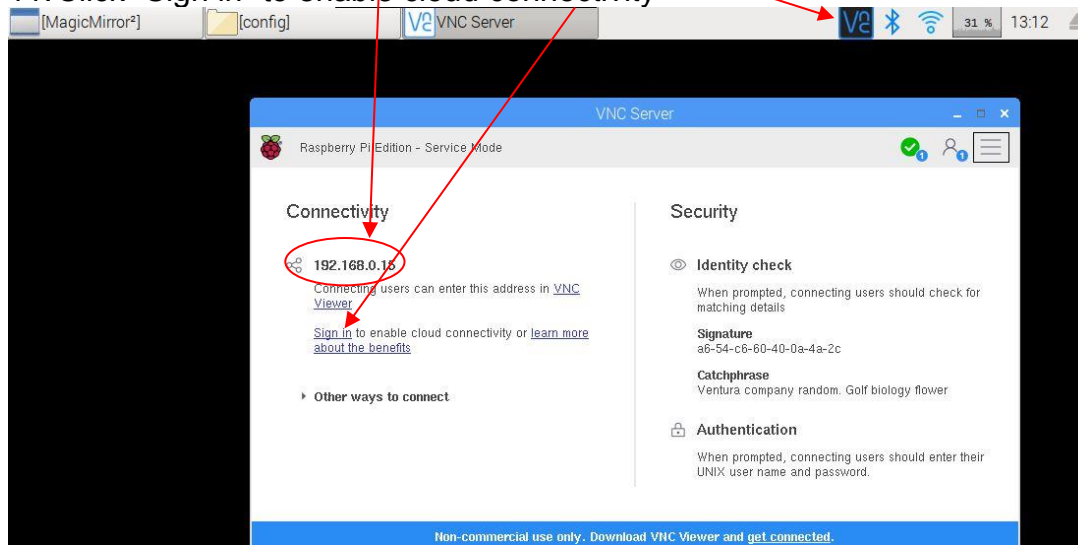

Remote Support Through REALVNC (<10 Minutes)

VNC viewer will allow Electrotherapy Designs (with your permission) to remotely log into your Smart Mirror to help with setup or fix any issues.

3. From your **home computer**, not the Raspberry Pi, download VNC viewer:
<https://www.realvnc.com/en/connect/download/viewer/>
4. Create account and sign up
5. Select the free "**Home**" subscription *****DO NOT SELECT A TRIAL SUBSCRIPTION***** and scroll all the way down to the bottom of the page and select "**Sign up without making a contribution**"
6. Open your email and open the "**Verify your email address**" email and click "**Verify Email**"
7. Click on "**People**". Then invite me to your group using my email address: **sdfannin@hotmail.com**

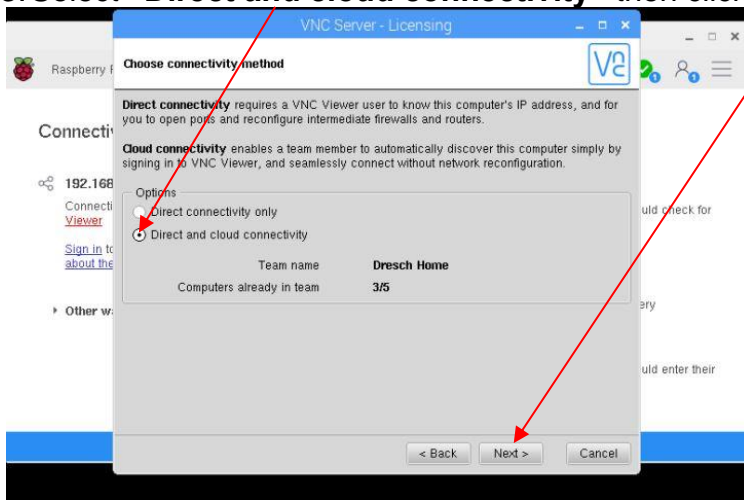

8. From your **Raspberry Pi**, select "Ctrl" + "m" on your keyboard to minimize the MagicMirror screen and access the Pi desktop
9. From the Pi desktop click on the VNC icon
10. Your Pi IP address **here** ****PLEASE WRITE DOWN YOUR IP ADDRESS FOR LAST STEP****
11. Click "Sign in" to enable cloud connectivity

12. From your **Raspberry Pi**, sign in to the VNC account you just created and select the team indicated and then select **“Apply”** and then **“Done”**

13. Select **“Direct and cloud connectivity”** then click **“Next”** → **“Apply”** → **“Close”** → **“Done”**

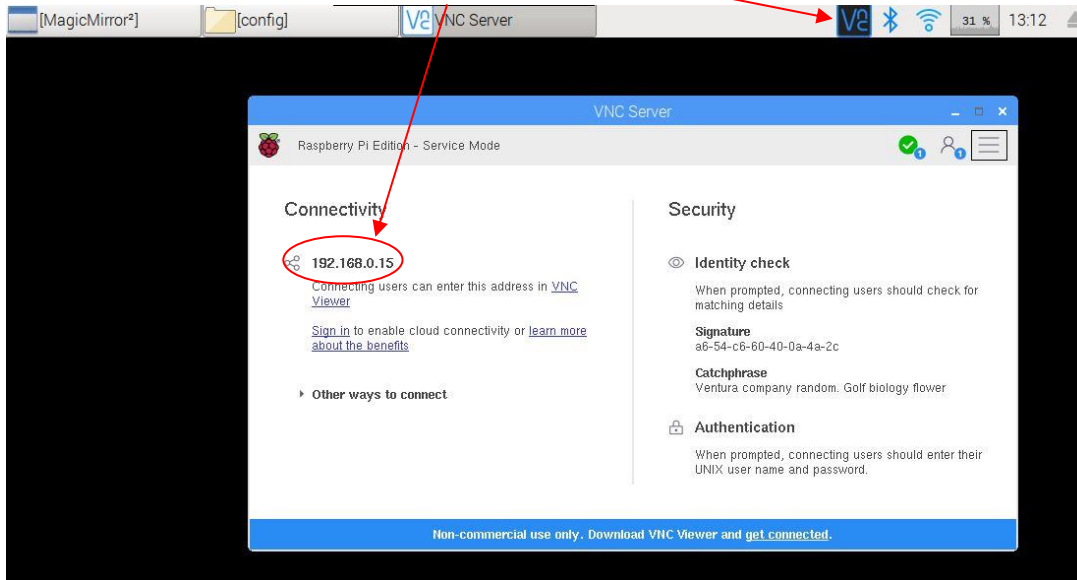

(OPTIONAL) Accessing the Remote Control Module for desktop PC and Smartphone (5 Min):

Remote Control allows for quick and easy access for restarts of your Magic Mirror from your Smartphone. It also has many other functions, such as turning on and off modules from your smartphone. Remote Control is set up to be accessed within your home WiFi, but can be configured to be accessed from the Internet (documentation - <https://github.com/Jopyth/MMM-Remote-Control/blob/master/README.md>)

14. Select "Ctrl" + "m" on your keyboard to minimize the MagicMirror screen and access the Pi desktop

15. From the Pi desktop click on the VNC icon

16. Your Pi's IP address will be here.

- From your desktop computer Web browser, enter the IP address from you PI into your browser: (i.e. <http://youripaddress:8080/remote.html>)
- To install on your smartphone, open a web browser from your smartphone and enter the same link (i.e. <http://youripaddress:8080/remote.html>). For quick access from your Android phone home screen, add the link to your phone's home screen: <https://www.maketecheasier.com/add-chrome-bookmarks-android-home-screen/>
- If you want to add for iPhone click here – <https://lifehacker.com/5809338/add-web-site-bookmarks-to-your-iphones-homescreen>

Magic Mirror Remote Screenshots

You can Remotely turn on and off modules or power off display from your smartphone

Available Modules

<https://github.com/MichMich/MagicMirror/wiki/3rd-Party-Modules>

How to setup modules instructions for beginners (*don't forget to scroll down the page of each module to verify if there are any "npm install" dependencies*):

<https://forum.magicmirror.builders/topic/4231/how-to-add-modules-for-absolute-beginners>

- The config.js file is located here:
- **/home/pi/MagicMirror/config**
- Open "config.js"

How to position modules:

<https://forum.magicmirror.builders/topic/286/regions>

top_bar and bottom_bar are light gray

top_left and bottom_left are red

top_center and bottom_center are blue

top_right and bottom_right are green

upper_third is yellow

middle_center is cyan

lower_third is magenta

Modifying the CSS Syntax to Change the Appearance of Specific Modules:

This will allow you to change the size, color, and appearance of individual modules in the MagicMirror display.

Before you modify the CSS, be sure to **make a backup of the custom.css file**, located in **/home/pi/MagicMirror/css**.

- Here is a link for learning more about CSS and how to change the custom.css file: <https://forum.magicmirror.builders/topic/6808/css-101-getting-started-with-css-and-understanding-how-css-works>

*****BACKING UP YOUR SD CARD – HIGHLY RECOMMENDED*** (15 Minutes)**

Completely power down your Raspberry Pi and unplug the main cord. Remove the mini SD card located below In your Raspberry Pi.

If you would like to back up configuration, backup the SD card to your desktop PC using the instructions in the link below

<https://thepihut.com/blogs/raspberry-pi-tutorials/17789160-backing-up-and-restoring-your-raspberry-pis-sd-card>

After you have backed up your Magic Mirror image, remove the SD card from your computer and the adapter and insert back into your Raspberry Pi - as pictured above.

USEFUL STUFF

Pi Power Switch – Top left of Mirror

If for some reason your Raspberry Pi **completely freezes up**, you can press the on/off button on the top of left of the frame to do a hard reboot of your smart mirror.

Smart Mirror Volume Level Adjustment

In the upper right of the desktop, click on the speaker icon.  Adjust the volume level as desired.

Increase or Decrease Display Power Off Delay Time

This will allow you to change the sleep time of the display after no motion.

In the `config.js` file (`/home/pi/MagicMirror/config`), scroll down to the module named “MMM-PIR” (example below). Change the time by delay to power off after no motion (i.e. 60 seconds=60000)

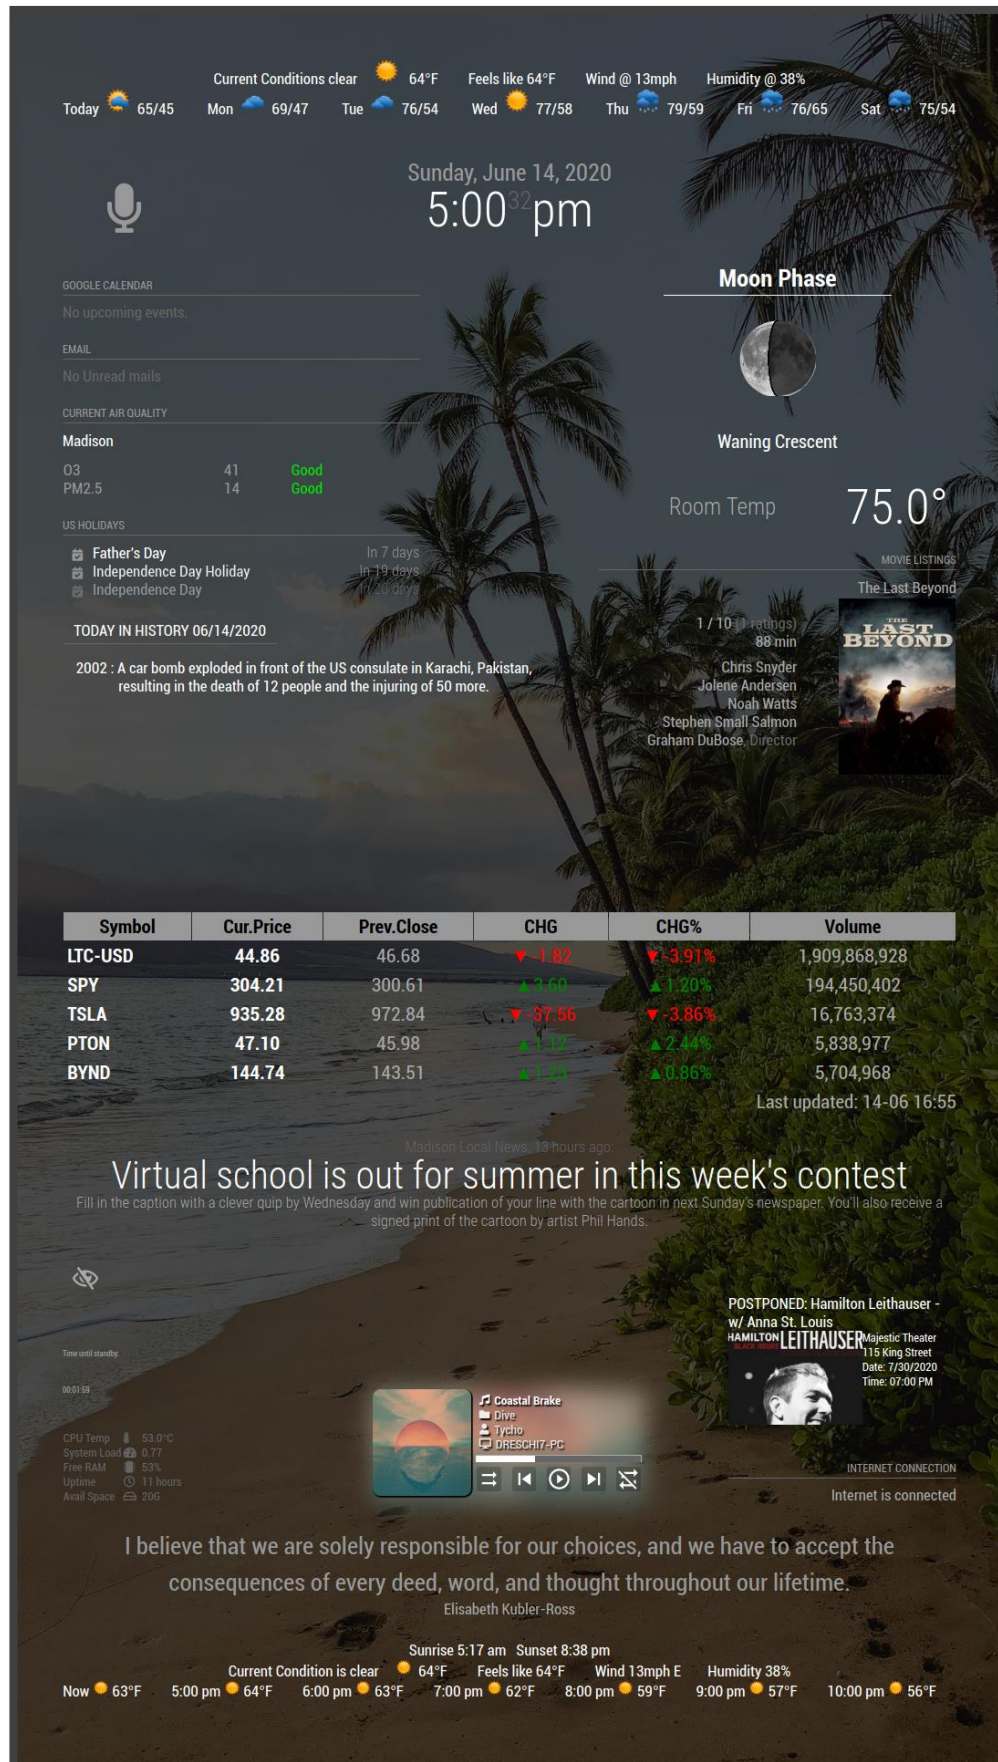

```
disabled: false,  
module: 'MMM-PIR',  
position: 'bottom_left',  
config: {  
  sensorPin: 12,  
  delay: 120000, //can be changed to your preference (ex. 120000 = 2 minutes)
```

Save the config.js file by clicking on “File” and “Save” (upper left in menu) and then “Ctrl” & “q” in the MagicMirror window for the changes to take effect.

Magic Mirror Keyboard Controls/Appearance

- ‘CTRL’ & ‘m’ to minimize window in Magic Mirror display and show the raspberry pi desktop (to make changes to the config file using Real VNC)
- ‘CTRL’ & ‘q’ to restart the Magic Mirror display
- ‘CTRL’ & ‘SHIFT +’ to zoom in Magic Mirror display (make larger)
- ‘CTRL’ & ‘-’ to zoom out Magic Mirror display (make smaller)

Madison Cawthorn, 24, Upsets Trump-Endorsed Favorite in North Carolina

Mr. Cawthorn's victory in the G.O.P. primary for a House seat formerly held by Mark Meadows, the White House chief of staff, was an upset for his handpicked successor, who had the president's backing.
