

Product: Koi Tunnel

Koi tunnels are designed to give the maximum protection to your fish from herons and critters. The tunnels provide shade for the fish on sunny days. No glue or harsh chemicals were used in the manufacturing of our tunnels.

To assemble the frame:

- Slide the PVC frame into the longest mesh pocket. Look for the slits in the mesh, this is where the TEE fitting will be. Repeat for other square pipe.
- Attach (1) straight pipe into the TEE fittings under the mesh. Tap in fully
- Slide (1) PVC pipe into the side pocket of the black mesh. Tap in fully
- Fill bottom pipes with sand or pebbles for more weight if desired.
- Attach the pipe into one of the corner elbows. Tap pipe in fully
- Attach the other end of the pipe to the other elbow and tap in place.
- Repeat the above steps with the second pipe.
- Tap all fittings for a secure fit.

After assembly, submerge the koi tunnel under the pond water until all of the air bubbles have escaped.

26" L x 14" W x 14" H
