

# The RURAL GROWTUNNEL

The Designed for the dedicated farmer, grow hobbyist, or passionate plant lover, The Rural GROWtunnel offers an enclosed cropping environment that provides protection from wind, rain, hail and intense sun. This is particularly important in a world where climate change is making weather patterns less predictable and crop planning difficult.

The controlled environment of our GROWtunnels reduces crop losses to pests, wind borne diseases, pathogens and spray drift from chemical farmers, making it the perfect environment for organic food production.

The Rural features a strong galvanised steel frame, specified to Blueband - BS1387 (British Standard) and durable 'Solarweave' 15% shade 160g cover film. Ventilation and climate are easily controlled with adjustable side walls that roll up to reveal in-seam stitched insect mesh, and rainwater is collected with an integrated guttering system.

Designed by GROW and available at [growtunnels.com](http://growtunnels.com), The Rural is a cost effective first step into organic production as it offers complete isolation from existing conventional farm operations, and requires minimal land footprint.

## GROWTUNNEL BENEFITS

- GROWtunnel crops out-perform field scale vegetables, reduce losses and are more uniform,
- Water, compost and other input use is far more efficient than in the paddock. There is no leaching or run off - a win for the environment,
- Harvest irrigation water from the roof and work on a closed loop system,
- The Solarweave cover is more durable than regular polytunnels and will last 8-10 years before recycling,
- Option to join our GROW Marketplace where we can guarantee you a reliable customer for your crops.

# The **GROW** MARKETPLACE

More than an app, the GROW Marketplace is a subscription-based online portal designed to connect, educate and facilitate selling your produce with local wholesale buyers.

With GROW Marketplace you'll have access to:

- certified organic seedlings delivered
- real-time calendar alerts for your harvest
- advice on chemical-free pest control and fertilising
- local wholesaler market for your produce
- real-time agronomic data for SMARTunnel GROWers†
- access to advice to assist with crop success
- we'll even facilitate 'GROW to order' agreements, so your harvest is sold, even before you plant the first seedling

† SMARTunnel access requires additional digital hardware

# BE a **CARBON POSITIVE** *Champion!*

The embodied energy cost of producing the solarweave cover and galvanised steel frame, in visual terms, is a Rural GROWtunnel full of CO2. However the good news is it only takes two crop cycles in one of our GROWtunnels to balance out that embodied energy cost.

From there on in, with good organic farming practices, GROWtunnels actually store more and more carbon with every subsequent crop - making you a Carbon Positive Champion!

We'll even provide guidance on growing organically, which means managing pests without poisonous chemicals and choosing the right fertilisers that won't damage the environment.
