## Excavating bucket with teeth

The excavating bucket with teeth has been designed for excavating and loading high density soils, such as earth, sand gravel and compact clay.

The teeth are interchangeable and provide excellent penetration, essential for working with high density material.

## Excavating bucket without teeth

The excavating bucket has been designed for excavating and loading high density soils, such as earth, sand gravel and compact clay.

The bucket shape provides excellent penetration, with consequent maximization of the load to move it in a stable way.

## Forks

### Floating forks

The floating forks are used for loading and unloading pallets even from inclined and uneven surfaces such as trucks with heavy gradients and rough terrain, they adapt perfectly to the support surface of the material to be moved thanks to their vertical sliding movement.

## Bucket for silage with grab

This equipment is intended for loading, unloading and handling bulk materials, such as silage, grains and chips.

Thanks to the use of the holder, the bucket is used to its full potential, thus providing a greater load capacity, as the material is held in the bucket volumetric load capacity.

## Bucket for manure and generic material with grab

This equipment is intended for loading, unloading and handling bulk materials, such as manure, non-hazardous waste in a compactable form and timber.

Thanks to the use of the holder the bucket is used at its full potential, thus providing a greater load capacity, as the material can be compressed and held in the bucket volumetric load capacity.

## Mixing bucket

The mixing bucket is the ideal device to produce fresh cement in any condition with unparalleled ease and speed. In addition to the significant reduction in operating costs, using this equipment is essential in many cases, for example when there is no electric current available for using classic concrete mixer.

## Multipurpose fork with holder

This equipment is ideal for use in handling very dense semi-solid material such as manure, peat, wet wood chips and more. The reduced distance between the teeth almost completely eliminates the outflow of the material. The holder has a double function, on the one hand it facilitates the detachment of the material from the pile and on the other, once tightened, it holds it firmly to the fork.

## Two-stage turbine snow blower

This equipment has been designed for the removing large quantities of snow. The adoption of a hydraulic piston motor with torque limiter prevents the possibility of breakage due to accidental inlet of objects hidden in the snow. The notched ice-breaking propellers minimize wear caused by gravel and stones mixed with snow. The snow exit duct is equipped with mechanically adjustable flaps.

## Baskets for landing at high altitude

### Extensible Trilateral basket with front opening

Trilateral hydraulic rotation basket, extensible by hydraulic cylinders, suitable for transporting people and materials at height.

The particular design allows opening a double swing door so that operators can get out.
