

Measuring and Planning your Kitchen Space

To be able to create a kitchen concept that fits the space and is everything you have dreamed of, we need some help from you, our clients. You will need to provide some information about the space the kitchen will be going into and what it might look like.

Step One: Measure the space and construct a floor plan

Here are some general notes to help:

- If you have house plans you could include those rather than re-measuring.
- Don't worry about marking out existing cabinets unless you have something like a built-in pantry or hot water cupboard that needs to stay.
- The measurements do not have to be exact, as we would always do a final site measure ourselves before placing the job into production.
- Below is an example of a kitchen measure. It is not supposed to be a masterpiece, but it does clearly show all the significant information.
- When drawing the space, do it as though you are up high and looking down. Make sure you draw the whole space available, not just where the current kitchen is. You could mark where you would like the kitchen to stop or leave it until you chat with your designer.
- When measuring windows or doors include the architraves as cabinets don't cover these
- Please write your dimensions in cm or mm, not inches and feet. The grid on the following page is 1cm x 1cm if you are feeling adventurous to make the sketch to scale.

Measurements to include:

1. Overall length of walls.
2. Windows and doorways, and where they relate to on the wall length. I.e. wall to the doorway 2650mm then a doorway of 910mm then another length of wall 650. These measurements should add up to your overall wall length.
3. If you are wanting to keep the sink or range in the same place, then mark these in. If not, then an indication would still be helpful.
4. It is useful to understand the area surrounding the kitchen, please include some photos.
