

Push Buttons

Do you want to transform your digital signage into an interactive display with LED push buttons? Videotel Digital has just about every type of button you could need for your application, from small to large LED buttons. Our LED push buttons come in various illuminated colors and are available in durable plastic or sleek stainless steel. You can also choose buttons with or without text. If you need custom text on your push buttons, we are more than happy to help. Whether you need small or large LED buttons, we carry what you need to create your ideal interactive display.

How it works

Our Pushbuttons can be purchased separately or incorporated in our PUSH solution. This solution may be simply connected to any of our interactive media players or our industrial DVD Players. PUSH can be configured in three ways...

- Turn key (1- 6 buttons) - for as little as \$138 we will design a custom harness that will connect from our player to your push button(s). Additional button connections may be added to the harness for \$16/EA (up to 6). A harnesses over 6' may be customized for a nominal fee. Design your harness with illuminated LED buttons which range from \$14.50 to \$23.50 each (available in 5 various sizes and 6 colors).
- Custom turn key (more then 6 buttons) - With the use of the IPM board we can create a custom solution with up to 99 buttons with any length of harness (call for quote)
- Do it yourself - With the use of our IPM board, you may connect your own buttons (or use Videotel buttons) and make your own hanness. The IPM is capable of up to 99 buttons and includes a simple terminal block for quick connections.

Description

- Made with highest quality materials
