

MG-2 Express[®] Lavatory System – MG-Series

- · ADA and TAS compliant
- Serves one or two users at a time
- Standard lavatory spacing on 30" centers
- Continuous bowl, sprayhead, and end caps are constructed of Terreon[®] or Terreon[®]RE solid surface material
- Available in a variety of colors
- · Available in infrared, air valve metering, or TouchTime® mechanical metering

Specifications

The flowing "wave" design accommodates one to two users. Units handle washroom traffic quickly and economically, while providing each user with personal space. Lavatories for the system are positioned on 30" centers. Bradley's continuous bowl features a contemporary flowing "wave" design. This unique "wave" pattern is repeated in the sprayhead, integrating the components. The pre-assembled sprayhead module is equipped with independent aerators, each served by separate infrared sensing module and solenoid valve (Model MG-2/IRP), pushbutton air metering valve (Model MG-2/AST4), TouchTime[®] mechanical pushbutton (Model MG-2/TTPA) or TouchTime piezo switch (MG-2/TTPB), or independent battery IR sensor and batteries (Model MG-2/BIR3). Operating range is 20–80 psi. Flow restrictor keeps flow rate constant at all pressures.

Product Compliance

Listed by IAPMO R&T to

- Uniform Plumbing Code (UPC)
- National Plumbing Code of Canada
- International Plumbing Code (IPC)
- IGC 156 and the requirements of CSA B45.5/IAPMO Z124 and

ASME A112.18.1/CSA B125.1

Complies with • ADA

NSF/ANSI 372

• ICC/ANSI 117.1

Listed by NSF International to

Listed by UL Environment to • GreenGuard Gold

This plumbing fixture is designed for hand washing only. It is not intended to dispense water for human consumption through drinking or for preparation of food or beverages.

Verify all rough-in dimensions prior to installation.

Consult local and national codes. Conformity and compliance to local and national codes is the responsibility of the installer.

Construction

Bowl, Sprayhead, and Pedestal End Caps

Constructed of Terreon, a densified solid surface material composed of a bio-based resin, or TerreonRE, a densified solid surface material composed of a bio-based resin and preconsumer recycled granules. Terreon and TerreonRE are resistant to chemicals, stains, burns, and impact. Surface damage can be easily repaired with everyday cleansers or fine grit abrasives. Terreon and TerreonRE are GREENGUARD[®] certified as low-emitting materials.

Support Frame and Access Panel

Bowl assembly and pedestal end caps are secured to a heavy gauge stainless steel support frame mounted to the wall. The contoured front access panel is constructed of 300 series stainless steel.

Vandal Resistance

The molded solid surface sprayhead is an integral part of the bowl module. A free-spinning collar protects the aerator from vandalism. The infrared sensor will automatically shut off water flow after 30–45 seconds if a vandal attempts to trigger constant operation by covering the sensor, or by placing a stationary object in the sensor's detection area. Pushbuttons are secured to the unit from inside the sprayhead. Air valves, water supplies, and waste are concealed within the pedestal/support frame assembly.

Standard Equipment

Continuous bowl with two lavatories, sprayhead, pedestal, stainless steel mounting frame (as described above), 120VAC/12VDC plug-in adapter (Model MG-2/IRP, Model MG-2/TTPA and Model MG-2/TTPB). Batteries are included (Model MG-3/BIR3). The following fittings are provided: P-trap, tailpiece, two flexible stainless steel supply connections, and Navigator® thermostatic mixing valve with stops.

Activation Types

Infrared (Model MG-2/IRP)

The sensor module uses a conical infrared transmitting beam, creating a wide detection area. Adaptive-style sensor shall learn installation environment upon powerup and react (activate) when the user's hands enter the detection area. Each of the aerators is controlled by a separate, slow-closing solenoid valve. Hands placed within the bowl are detected and will activate a flow of tempered water at a rate of 0.50 gpm (1.9 Lpm). A timing turn-off delay of 2–3 seconds results in a smooth, controlled hand-washing operation. The Bradley adaptive sensor is not affected by varying color tones or darkness. Direct sunlight or bright washroom lights (up to 10,000 foot candles) will not activate the system.

- Solenoids 12VDC, 3/8" NPT. The electronically activated, slow-closing solenoid valve provides reliable performance since there are few moving parts, and its operation is unaffected by most chemicals and minerals often present in municipal water supplies. Neither the solenoid valve nor the infrared sensor module need adjustment for range or timing.
- Low Voltage Plug-In Adapter A UL/CSA-listed 120VAC/12VDC plug-in adapter powers the solenoid valves. The plug-in adapter, furnished as standard equipment, plugs into a standard GFCI protected electrical outlet.

Battery Infrared (Model MG-2/BIR3)

Each battery-powered sensor uses a zone-focused infrared transmitting beam, creating a large detection area. The sensor is not affected by varying skin tones or darkness. When hands enter the detection area, the sensor starts water flow by opening the valve electronically. Tempered water flows at a rate of 0.50 gpm (1.9 Lpm). When hands leave the detection area, the sensor stops the flow of water by closing the valve. The 6VDC, electronically activated solenoid valve has few moving parts, providing reliable operation that is unaffected by most chemicals and minerals often present in municipal water supplies. Each station is powered by a single lithium battery. Battery type is Duracell[®] DL 223A 6V lithium or rquivalent (batteries included) with a life expectancy of 4–5 years or approximately 200,000 cycles.

Air Valve Metering (Model MG-2/AST4)

Each pushbutton pneumatically actuates a non-hold-open air metering, single-temperature valve with field adjustable timing from 0–45 seconds. Factory set at 11 seconds. Each pushbutton activates one valve which, in turn, activates one hand washing station at a rate of 0.10 gpc (0.38 Lpc). Push button requires less than five pounds of pressure.

TouchTime® Mechanical Metering (Models MG-2/TTPA & MG-2/TTPB)

Each low voltage mechanical pushbutton or piezo switch actuates a non-hold-open, slow closing anti-hammer solenoid valve that is timed from an electronic potted assembly. Each push button activates one valve, which, in turn, activates one station flowing tempered water at a rate of 0.10 gpc (0.38 Lpc). TouchTime controls water flow at each station through the use of solid-state, digital circuitry. Timing is factory set at a 15 second run time but is field adjustable to pre-set timeout periods and optional auto-flush function. The 24 hour flush function will activate water flow for a period of 60 seconds any time there has been no activation within the past 24 hours. Push button requires less than five pounds of pressure.

Optional Equipment

Soap Dispenser Type

One horizontally-mounted pump-style valve is located over the drain. Soap tank is located within the stainless steel frame. Soap tank is refillable through an easily accessible exterior filler cap. Filler cap is vandal resistant and opens with special spanner wrench included. Soap tank capacity is 34 gallon.
