SPECIAL EDUCATION MATH CURRICULUM

Grades K-5 Intervention Bundle

Hello!

I'm excited to show you my Step-by-Step Math to Mastery™ resources!

Inside you'll find details on lesson workbooks and progress monitoring assessments. These materials were created for students in special education and math interventions and have been used successfully in many settings.

I recognize that Special Education teachers teach several grade levels and multiple subjects for each level—and have a tight budget. I hope you find the value of these resources far outweigh the cost. I'm encouraged by comments like this one from Whitney H.:

"I was so scared to buy this [K-5 Math Bundle] because of the price but after 2 months it has easily saved me that much time spent after my contracted hours putting things together. I can just hand it to my paras and they can teach the students without me micromanaging."

I sincerely appreciate your willingness to try my materials and for letting me know how they are working in your classrooms.

Angela Dansie

Lesson Workbooks

Standards-Based:

Tied to K-5th Grade Standards addressing Numbers, Addition, Subtraction, Multiplication, Division, Fractions, and Decimals

Evidence-Based High Leverage Practices for Special Education:

#12 Systematically Design Instruction Towards Learning Goals

#13 Adapt Curriculum Tasks and Materials for Specific Learning Goals

#14 Use Cognitive and Metacognitive Strategies (Schema Instruction)

#15 Provide Scaffolded Supports

#16 Use Explicit Instruction

Consistent & Predictable Format:

- “I Can” statements at the top of each page state lesson objective
- Model (I do), Guided Practice (We do), Independent Practice (You do)
- Uncluttered. White space and fewer problems on each page
- Workspace with visual supports

Open and Teach. Paraeducator-Friendly.

Written by a Special Education Teacher.

Loved by Teachers in All 50 United States and Canada.

| Over 100 teachers | \$99 per teacher (67% discount) |

Don't hesitate to email me if you need a more personalized quote.

This was exactly what I was going for. I've been using it all school-year and I've never seen my kids make progress like they have. Other special ed teachers keep asking me to share with them . . . I've had two other friends purchase it and they love it . . .

Progress Monitor Assessments

This library of math assessments makes collecting data on IEP goals simple.

With over 160 skills and multiple forms per skill, you'll find exactly what you need.

And once you have the data, you'll save tons of time writing progress reports using the template statement for each skill.

With full answer keys and clear record sheets, they are easy for paraeducators to administer and score.

Students can help track their own data by filling in a graph and setting a goal.

Assessments cover counting, number sense, place value, addition, subtraction, multiplication, division, fractions, decimals, word problems (including multi-step word problems), shapes, money, time, perimeter, area, and volume.

They can be used with any math curriculum.

What you don't use for progress monitoring can be used for spaced review.

These 160+ skills were chosen because they are fundamental math skills that are found across Common Core State Standards, TEKS, and Florida's BEST.
