

AUSSIE'S BEST

Magnesium & Trace Mineral Spray

Trace minerals work as a team, and they rely on each other for both absorption and proper utilization within our bodies. For Magnesium to have an optimal effect, the other 70+ trace minerals found in sea water need to be present. It's all about the synergy. We source our Trace Minerals from the pristine Southern Australian coast, and concentrate them in a very organic way that maintains the very delicate and important balance of these elements, to deliver a finished product that may help soothe muscles, aches and pains.

Each 1ml of Aussie's Best Magnesium & Trace Mineral Spray contains 52mg of trace minerals with 49mg being Magnesium Chloride.
