

Firstly we would like to thank you on your Interest in “U-Scribe Jig” Welcome aboard the Scribe Train, You are Now a valued member of the #EliteScribeTeam and you’ll be a #Caulkiller in no time. Choo Choo

We value your support, as Tradesmen we know how important it is to get your name out there and cement foundations for Quality work and service, We love to share our Fellow Trades and DIY Enthusiasts work on our social media, we even Reward them with Prizes for just tagging and sharing there work when using U-Scribe Jig, Find us @Uscribejig on Instagram, Tik Tok, Facebook, Twitter and Youtube

Thank you Dan & Scott @Uscribejig

HOW TO

U-Scribe Jig How To - Off Set Method

Using the Offset to Help Mark Perfect Scribe Lines

Attach your U-Scribe Jigs to your filler material You can do this in 2 ways, using the screw in The seat position or a screw in the slotted Section, if using the slotted section we advise Using a pan head screw as to not damage the Jigs, using 2 jigs on smaller fillers etc and 3 on Longer fillers etc, positioning one in the middle Will help reduce flex. If you want flush fillers you Must use the screw in the seat position so that You do not damage this inside edge.

Slide your filler into position over your cabinet, your U-Scribe Jig are now holding your material perfectly in place acting as your #3rdhand fixing the reference point for you

This is the same for the Top, Bottom or both sides of your cabinets in this image we are using the the right hand side as we look at our project

As you can see in this image, the U-Scribe Jig are holding the filler panel over the front of our cabinet, our cabinet on this project is 18mm, so now we are offset by 18mm, the reason we call this the “Off Set Method”

Using an off cut block of the same thickness of your cabinet or material (18mm in this case) position it against your wall and mark down your wall with a pencil or marking knife, you are drawing the perfect image directly onto your filler

As simple as that you have marked the perfect image of your wall, floor or ceiling directly onto your filler, no more guess work, Just better more consistent results

Cut away away the excess which ever way you feel comfortable, track saw, jigsaw, table saw, hand saw etc, just remember to leave the pencil line in

Slide and fit into place

As easy as “U-Scribe it, U-Cut it, U-Fit it”

How to - Infinity method

With this method you can scribe larger material and fillers infinitely

Attach your U-Scribe Jig to the back of Your Material,
We recommend using the screw hole in the seat
position of the jig, 2 for smaller fillers 3 for bigger fillers

In This Image we are doing a longer filler
for a wardrobe, We have used 3 Jigs on
this filler for centre support, as you can
see the filler is now flipped and positioned
on the inside of the Cabinet so the outside
edge is flush with the outside edge of the
cabinet

Simply cut an Off cut of the Exact same material, as you can see here my cut block it is the exact width of the filler panel im using, this can be any size as long as its wide enough to cut your filler from, 100mm, 150mm, 200mm, 250mm it doesn't matter the technique is the same

We are going to be using this block to draw the perfect image of our, wall, floor or ceiling directly on to our material, Because of the unique design and Fixing of the reference point of the “U-Scribejig” we have both hands free

Now using the block positioned against your wall, Simply scribe a line onto your filler panel, the block is following the contour of your wall adding the perfect image onto your filler material, U-Scribe Jig acting as your #3rdhand

Congratulations you just Marked the perfect Scribe line onto your filler, no guess work, no balancing act, No problem

Just an Easier, Simpler way of getting Consistent results

With you chosen method of cutting, Track saw, table saw, jigsaw, hand saw etc, Remove the excess from your material, remember too leave the line in

(Quick tip, when scribing your fillers remember you are always marking out what you want to remove)

Slide into place and fix your filler

As easy as “U-Scribe it, U-Cut it, U-Fit it”
