

Static Load Test - Ripstop by the Roll- -#18863329

Starting dimensions (4/30/16) :

- Seam to Seam Length - **121"**
- Width - **57 ¾"**
- Cuff- **4 1/8"**
- Sag Apex (lowest point to floor) - **15"**

Ending Dimensions (5/13/16):

- Seam to Seam Length - **123 5/16"**
- Width - **59 ¾"**
- Cuff- **4 1/8"**
- Sag Apex (lowest point to floor) - **12"**

In conclusion to our static load test, we have collected data to show stretching of the fabric. This hammock was tested for a duration of 2 weeks with a load of 1200 lbs. However, with the load applied and with the duration of this test, we have noticed very mild stretching. With the only stretching in the seam length and the overall width, we conclude that this hammock would be considered suitable for production and development. Please reference the hard measurements above, along with a photo below.
