Spark II Software

Dynamic Presentations

Spark II is our own interactive touch screen presentation software – which seamlessly integrates with our G-Touch Classic, Deluxe and 4K screens. Spark II has been completely redeveloped in order to be compatible with 4K screens as well as our full HD Classic and Deluxe models. Building on the capabilities of our original Spark presentation software, Spark II incorporates even more features that enable teachers to enrich their lesson content – the only limit is your imagination!

Spark II offers a completely revolutionary means for teachers to facilitate student engagement, collaboration and interaction. The infinite canvas area means that linear presentations that must follow a pre-defined journey through a series of slides are a thing of the past. With an easy-to-use interface and streamlined icons, simply drop in the content that is required – including videos, web pages, images, and more. Connect a Visualiser to display static images – for instance documents – or dynamic content such as a science experiments for all to see on the larger screen to annotate over.

Spark II also has pre-designed subject specific icons and images for Chemistry, Physics and Maths, giving teachers the ability to quickly draw up a diagram in seconds.

Key Features & Benefits

- 
Easily Adaptable Lessons
 The infinite canvas area built into Spark II facilitates lessons and presentations to take a dynamic journey around the screen and eliminates linear slide presentations.
- 
Import Existing Whiteboard Resources
 Importing existing resources is effortless and saves teachers from having to create lessons from scratch.
- 
Intelligent Handwriting
 Using the hand writing tool simply write on to the Spark II canvas and the tool will convert your writing when you stop to a text object.
- 
Insert Media
 Inserting media and video couldn't be simpler. Spark II has icons designed for the job and imports them in just a few clicks.
- 
Infinite Canvas
 The infinite canvas area means that your presentation no longer needs to follow a pre-defined journey of slides but can navigate freely across the screen.
