BIOMETRIC/ IEVO-DR - USB Desktop Registration Units

Product description

The ievo® desktop registration units manage the fingerprint enrolment process. Using a USB connection, the units plug directly into a PC, simplifying registration with an interface for effective enrolment.

Additionally, the registration units take away the need to enrol users via active or in-use product - essential for high traffic situations.

Both ultimate and micro registration units are ideal for the ultimate™ reader head. The micro unit is only to be used with the micro™ reader head.

Key features

- High quality registration units
- USB powered - no additional PSU
- Desktop mount
- 500dpi image resolution
- Fast & reliable image acquisition

 Certification

 DEEE

 RoHS Certification
