CARDS-XT
ECP-XT EVENT CARD PRINTER

The ECP-XT event card printer is based on an established colour sublimation card printer and can print extra-long cards, such as ID cards for major events.

Partially preprinted cards with a width of 54 mm and a maximum length of 140 mm can be personalised on a printing area of 54 x 86 mm, single sided. The PD display, the plug & play driver and an easy field-changeable printhead ensures maximum convenience.

As well as printing at low sound levels, one of the ECP-XT Printers outstanding strengths is its fast printing speed; Up to 180 full colour cards per hour and 1,400 monochrome (K-Resin black) printed cards per hour.

In addition the ECP-XT comes with an option of an embedded encoding kit for either RFID transponders, smart cards or magstripes.

When it comes to the printing costs, it's one of the cheapest of its class. The ECP-XT event card printer is the ideal solution for the professional design and creation of extra-long passes/tickets and vouchers for major sport or music events. Visitors can be equipped with useful extra-long tickets within a few seconds.
