VIE SCOPE®

A simple and efficient device to secure the Airway

Insert scope and identify glottis opening between vocal cords

Pass the bougie under direct vision between the vocal cords into the trachea

Remove the scope leave the bougie in place

Pass the ETT over the bougie into the trachea

Remove the bougie

Ventilate

The Vie Scope is a self-contained, battery powered, disposable scope that takes advantage of a closed circular tube with a beveled end to visualize the vocal cords better than all other methods using the naked eye.

The ring of LED lights is transmitted through the side wall of the tube down the entire length of the tube to give the user maximal illumination of the target tissue with minimal chance of light obstruction by secretions or blood.

You could save a life with a Vie Scope.
