

# Antenna Switch

Like most products from Tactical Support Equipment, the idea for the Antenna Switch came from the battlefield. The typical user is kitted up with radios, headsets, push-to-talk switches, vest antennas and it all works wonderfully, until the user gets into an armored vehicle, or wants to use a different type of antenna, or...the scenarios are endless.

The antenna switch allows the user to easily connect their handheld radio to a vehicle or SATCOM antenna without disconnecting their primary whip or vest worn antenna connected to the radio.

The Antenna Switch is offered with a BNC or TNC connector on the side port. The BNC version offers speed and commonality with most antenna systems, while the TNC version provides a secondary port for other devices equipped with TNC connectors.

**Part #: TSE-ANT-S**  
(Antenna Switch w/BNC Connector)  
NSN: 5985-01-563-5364

**Part #: TSE-ANT-S-T**  
(Antenna Switch w/TNC Connector)

## Specifications

- Rugged Design
- Designed to work with the PRC-152, PRC-148 and other Handheld Radios
- Connector Options
- Quick Switching between Antennas
- 7-Watt Power Max

Available on GSA Schedule **GS-35F-0039T**
