

Surveillance Photography 4-Day Course

The Surveillance Photography 4-Day Course provides students with a familiarization of different types of digital still cameras, an understanding of the techniques associated with using photographic equipment, and applying it to surveillance operations. The course is designed to give graduates a very good overall knowledge of the equipment and its proper use in surveillance applications.

Objective: Learn the fundamentals of digital photography surveillance operations & equipment. Graduates demonstrate proper technique using specific equipment.

Lesson Assessment: Daily classroom instruction and hands-on practical exercises are conducted to demonstrate a mastery of daily objectives. Each day of class includes hands-on demonstrations by the instructor. When the instructor is confident that the objective of the demonstration is understood, the class conducts practical exercises to enhance their comprehension of the task. These practical exercises include equipment use & setup. The instructor also insures that key terminology is understood by the class as it is used repeatedly in the classroom and during the practical exercises.

Prerequisites: Students of the Surveillance Photography 4-Day Course are not required to have any knowledge of digital photography equipment, urban fixed or mobile applications, or surveillance experience. **Enrollment is restricted to individuals who are employed as law enforcement agents, investigators, or officers; members of the U.S. military and allied militaries; non-contract employees of the Department of Defense, Department of Homeland Security, and U.S. intelligence agencies.** All students need a willingness to learn and an attitude that fosters a good learning environment for all parties involved.

Materials: Students need note taking materials and cell phones. As the majority of learning is dependent upon having the necessary materials TSE, Inc. provides the following equipment: computers, image enhancement software, *SOME* digital photography equipment, cables. **It is HIGHLY RECOMMENDED that students bring with them any organizational Digital Single Lens Reflex (DSLR) Canon or Nikon camera systems and lenses up to 400mm that are available to them.**

Instruction: PowerPoint presentations are used as a teaching and lecture tool. These presentations progress in a logical manner starting with an overview of basic digital photography theory & terminology. The presentations then flow from a discussion on types of digital cameras, differences between models, and techniques for use in a surveillance environment to instructor guided demonstrations and team/class practical exercises.

Student activities: Student activities are geared toward a 4-day block of instruction that includes operations or exercises conducted during periods of darkness.

Day 1: Focuses on classroom instruction detailing a basic digital photography overview & hands-on session with professional grade DSLR cameras. The remainder of the day is devoted to student practical exercises using the professional grade cameras.

Surveillance Photography 4-Day Course

Day 2: Begins with an orientation and exercise on DSLR remote shooting equipment (tethered and wifi), followed by field & range testing with the cameras for the afternoon. The evening concentration is on DSLR low light operations for surveillance purposes.

Day 3: Progresses to a mission planning, surveillance techniques, & operational cover class followed by an urban surveillance mission using only digital photography equipment. Team leaders are selected and must plan for and execute a surveillance operation based on techniques presented in

the course. The practical exercise includes at least one fixed site installation. Following the exercise, an after action review is conducted, critiquing each team's performance & product achieved.

Day 4: The final day consists of constructing an intelligence product as a class using the images collected during the previous day's exercise. Following the presentation of the project, the final block of instruction concentrates on DSLR video familiarization for surveillance purposes. The last day ends with a week overview and question and answer session.

Contact: For questions concerning registration, training, and location please contact the Director of Training, Mark Conneway at (910) 425-7232 or 3360, or via email at training@tserecon.com.
