Assemble the Scope as the picture on the right side.

Open the view window of RCOM incubator.

Before use, replace proper lightproof sponge to your egg size.

Be sure to replace EZ Scope with Rcom view window after egg inspection.

The brighter the egg shell, the easier to inspect the inside. (Ex: Duck egg)

Cover the EZ scope on the Rcom main body exactly.

EZ Scope helps you to monitor the incubation progress with your computer by using Webcam.

The notebook computer and webcam are not included in the product.
