# Hexagonal Box Assembly Instructions
Please Note: For best results, pre-crease all edges before step one.
1

Push the furthest edges of the base inwards so the box takes shape.

2

Press the base panel firmly down into place.

3

For the lid, before folding each panel over, you want to ensure that the tab is positioned as above.

4

Fold the panel over the prepositioned tab. Repeat this all the way around the lid. When folded, the panels should lock into position.

5

Now you can fill your box and place the lid on the base.
