- **Suction increase/reduce button** : increase/reduce suction level (total 12 levels per mode)
- **Suction level** : Indicates the level of suction
- **Battery indicator** : Red light when low battery (<20 mins), flashing red light when battery flat, green light when fully charged

Note

The appliance will turn off automatically after 20mins of operation

Full charge takes about 2.5 hours. Avoid overcharging.

Power adaptor excluded. Compatible with Output 5V 1A .

Assembly Sequence

Put the silicone valve into the collection cup.

Fit the silicone flange onto the collection cup and ensure it is properly sealed. Align top opening.

Ensure flange is properly closed along all sides.

Insert the diaphragm into the collection cup. Press it down to ensure it sits in properly.

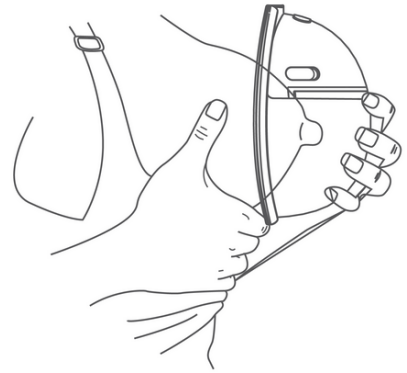

Sit the pump motor onto the collection cup.

Wearing the pump

Put the assembled pump firmly onto your breast. Ensure that the nipple is aligned in the centre. Keep the pump upright at all times.

Tip: Use one hand to hold your breast while the other to put the pump on.

Use the bra extender with your nursing bra to fit the pump. Ensure that the pump sits firmly on your breast.

Tip: Use the bra extender to prevent damaging your bra by over stretching it.

Cleaning

Breast pump parts are recommended to wash, sterilise and dry before and after every use.

Take apart all accessories when cleaning and sterilising. Allow accessories to cool for 20 mins before assembling to avoid damage.

Wipe motor, especially the bottom with damp cloth.

When cleaning the silicone parts, please be gentle. If damaged, it will affect the suction and function of the breast pump.

Remove motor to pour out milk, to prevent liquid entering motor.

App Pairing

Download and install app on phone.

Turn on bluetooth on phone and launch app.

Inside app, select 'Device' (bottom left icon), click '+' to search/add device.

Press and hold power button on breast pump to activate pairing mode.

Select 'breast pump' on phone screen to connect.

Note

Avoid over pumping to prevent breast/nipple injuries. Please seek medical advice if breast becomes painful because of using the breast pump.

To have a smooth pumping session, please set the mode and suction level according to your personal preference. You may use either one or both (stimulation/expression) modes, depending on individual.

Turn off the power before removing the pump from your breast.

All function of this product are described in the user's guide.

Always check the breast pumps and components for wear and damage before use. Replace immediately if damaged. Regular replacement is required due to wear and tear.

Breast pump parts are recommended to be washed and sterilised before and after every use. Refrigeration between pump is highly not recommended.

Do not use this product for other intentions not indicated in this guide.

Ensure the opening on the silicone flange is aligned on top to prevent leaking.
