Species: *Ceriops tagal*

Ceriops tagal is a small tree with a distinctive root growth. It's a compact branched tree with thin breathing roots. It occurs in estuaries, swamps and lagoons in the coastal areas of the Indian Ocean from Africa to Asia, Australia and the Pacific. *Ceriops tagal* was once used as a source of tannins and dyes. Nowadays it is still used as a source of these products and as well as medicines, once numerous applications in traditional medicine have been reported.

Tree(s) planted in Project Eden Projects, Madagascar

In response to the large-scale loss of mangroves and upland forests in Madagascar Eden Reforestation Projects initiated the Madagascar Reforestation Project. The program began in 2007 and since its inception Eden has successfully planted over 16 million mangrove and dry deciduous trees in northwest Madagascar.
