

Kit Contents:

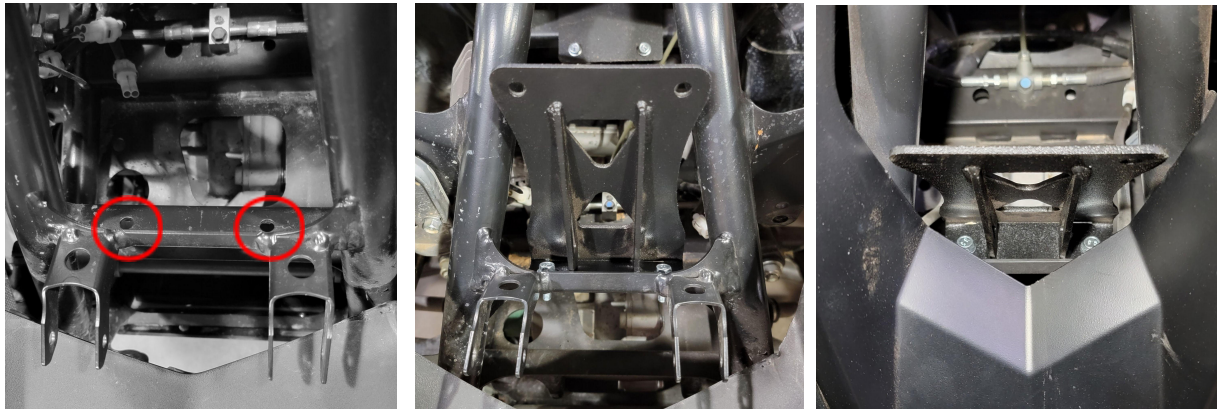

- 1 x Lower Bracket
- 1 x Upper Light Bracket
- 2 x M6 Nut and bolt
- 2 x 5/16 Nut and bolt

COMPATIBILITY:

2019+ Yamaha YXZ1000R

STEPS

- 1) Removing the Front Hood section makes the install much easier but is not required. There are two holes in the frame as seen in the photo below. The lower bracket will install onto those holes with the supplied M6 nuts and bolts.

- 2) If the hood was removed, tighten the 6mm bolts and reinstall it. Now, attach the upper bracket to the lower bracket with the supplied 5/16" nuts and bolts. Once that is complete you can mount your choice of pods or light bars to the upper bracket slots.
