OUR COMMITMENT TO REGENERATIVE AGRICULTURE

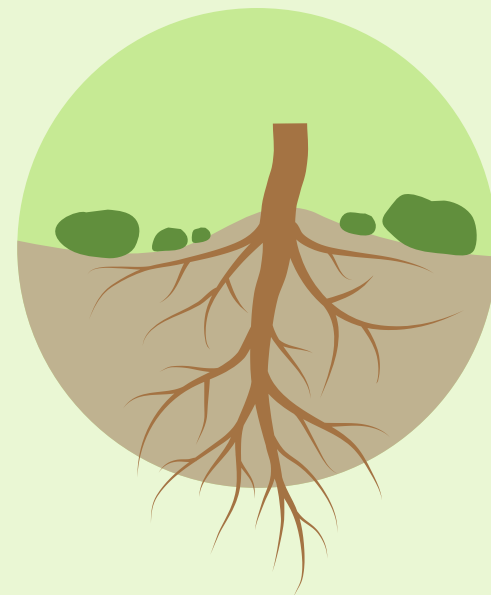

In a recent survey, **Fresh Hemp Foods** confirmed that a majority of our growers are practicing one or more of the key pillars of Regenerative Agriculture.

Maximizing Biodiversity

Biodiversity is critical for soil health. 80% of our survey respondents include 3 or more crops in a 3-year rotation, with some growers including up to 8 crops.

Living Roots

Living roots help to prevent soil erosion. Over 80% of survey respondents claim to have cover crops or perennials in their rotation.

Minimizing Soil Disturbance

On average, 88% of our respondents claimed using 3 tillage passes, with conventional growers tilling less than organic growers.

Farmer Livelihoods

Fresh Hemp Foods invests in the local community by providing agronomy training and expertise for organic and regenerative hemp farming, increasing revenue opportunities.

Hemp Supports Regenerative and Sustainable Farming

Hemp is good for soil health.

You can incorporate the residue back into the soil to help build up organic matter and help store carbon.

Hemp works with many cover crops,
and can help to support the incorporation of living roots.

Hemp reduces pest pressure.

When combined with cover crops, hemp can be an important part of controlling weeds and breaking disease cycles.

Hemp is Carbon Sequestering.

It absorbs roughly 1.63 tons of CO₂ for every ton of hemp grown.

Certified

Corporation

FRESH HEMP FOODS IS PROUD TO BE B CORP CERTIFIED AND CARBON NEUTRAL.

Every decision we make is influenced by how it will impact the community and environment around us. With our B-Corp Certification and by having carbon neutral operations under the Carbonzero Certification program, Fresh Hemp Foods is committed to sustainability in every part of the company.

B CORP: Certified B Corporations are leaders in the global movement for an inclusive, equitable, and regenerative economy.

Fresh Hemp Foods is proud to be a certified B Corp since 2014.

CARBONZERO: Our facilities have been carbon neutral since 2018. All greenhouse gases produced are offset with high-quality carbon offset projects. We also purchase Renewable Energy Credits (RECs) in the form of Wind Power to account for our electricity use.
