

HOW TO HEAT SOUP

Fresh

Although the container it is sold in can be used in the microwave, it is full and it is best poured into a different container to heat in the microwave. Also, it can be poured directly into a pot and heated up that way. Take care, just to bring it to the boil and eat. No need to simmer. Cream soups can burn easily, so take care to stir frequently!

Frozen

All frozen foods are best thawed in the cooler overnight. The same goes for soup. However, you can thaw in the microwave first and then follow instructions above.

Thank you for your purchase and enjoy your delicious soup! Any feedback is always welcome. justthefood@elizabethan.com
