

ARGON

DA-1 digital amplifier

Operation instruction

The Argon DA-1 is a very simple-to-use product and at the same time it contains advanced digital technology.

In just a few steps you will have hooked up your Argon DA-1 and be ready to play.

Connect the DA-1 to the Power supply and connect to an electric outlet.

Connect any audio source (digital or analogue) using one of the connections no. 3-6 as shown on above. The cable to use, should be included with the audio source when you bought it.

Connect the loudspeaker cables to the DA-1 using either the included fixed mounted cables or using the adaptor cables (as shown below) combined with your own choice of cable type/ length.

Select the input on the front of the DA-1 to correspond with the input used on the backside, by pressing the "input selector" until light appears in the corresponding "input indicator". And you should be ready to go...

Visit us at www.argonaudio.com or email us at info@argonaudio.com if you have any questions or what like to know more about Argon audio.
