1. General Description

This display is a 0.32inch diagonal, 800× 600 dots active-matrix color OLED panel module based on single-crystal silicon transistors. This panel integrates panel driver and logic driver, and realizes small size, light weight, low power consumption and high resolution.

Applications: View finders, Head mounted displays, etc.

- 800 x 600 Real RGB Resolution
- AP Operated Resolution
 - 800 x 600,768 x 576,320 x 240,
- Frame rate: 800 x 600 up to 120hz
- Normal operation supports full color mode: 16.7M colors (24-bit 8(R):8(G):8(B))
- Interface
 - RGB interface(R:8bit,G:8bit,B:8bit)
 - MIPI D-PHY with 2 lanes
 - I2C interface
- Vertical/Horizontal scan direction control
- Orbit supported
- Wide range Brightness adjustment
- Normal/Rolling/Dimming mode
- Temperature compensation
- Over temperature protect
- 3 Power input: ELVDD(5~6.5v), ELVSS(-3~-5.5v), VDDI(1.62~1.98v)

2. General Feature

| Item | Specification |
|-----------------------|----------------------------------|
| Resolution | 800(H) x 600 (V) |
| Number of dots | 1.44M (800x600x3) |
| Pixel Size | 8.1μm x 8.1μm |
| Pixel Arrangement | Hexagon, delta arrangement |
| Active Area | 6.48mm x 4.86mm / 0.32" diagonal |
| Luminance | 2000 |
| Contrast Ratio | 100,000:1 |
| Uniformity | > 85% |
| Power Consumption | 220mW |
| Gray Levels | 256 |
| Interface | I2C+RGB and MIPI |
| Frame Rate | 15~120HZ |
| Weight | TBD |
| Operating Temperature | -20°C to +70°C |
| Storage Temperature | -40°C to +80°C |

3. Optical Specification

| Tpanel=30°C | Parameter | Min. | Typ. | Max. | Unit |
|--|----------------------------------|------|-----------|------|-------|
| Brightness | | | 2000 | | cd/m2 |
| CR | white to Black Contrast Ratio | | 100,000:1 | | |
| Uniformity | End to end large-area uniformity | 85 | | | % |
| CIE Red | CIE-x | | 0.64 | | % |
| | CIE-y | | 0.33 | | |
| CIE Green | CIE-x | | 0.24 | | % |
| | CIE-y | | 0.68 | | |
| CIE Blue | CIE-x | | 0.15 | | % |
| | CIE-y | | 0.06 | | |
| CIE White | CIE-x | | 0.313 | | % |
| | CIE-y | | 0.329 | | |
| DCI-P3 | | | 90 | | |
| Frame rate | | 15 | | 120 | Hz |
| Power consumption(3000nits, D-PHY 2lanes,60Hz) | | | 220 | | mW |

Note1: If there is no specified, the specification of optical is specified at 30 degrees Celsius.

Note2: Definition of optical measurement system.

The optical characteristics should be measured in dark room. Brightness is measured as peak luminance at full white pattern (Gray level=255 with 8bits color depth);

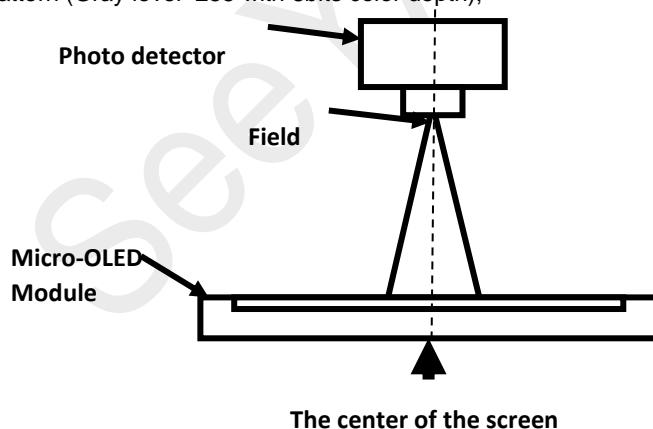

Fig.1

Note3: Definition of Uniformity at gray level255(8bits color depth) and 100%duty emission.

Active area is divided into 9 measuring areas (Refer Fig. 2). Every measuring point is placed at the center of each measuring area.

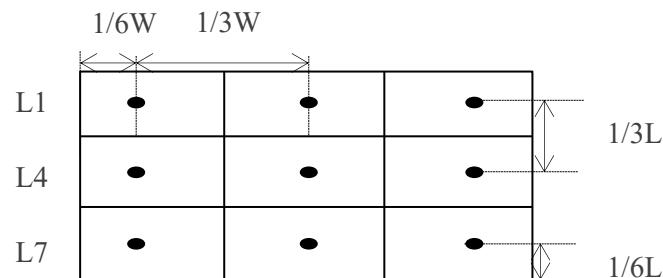

Luminance Uniformity (U) = L_{min}/L_{max}

L-----Active area length; W----- Active area width

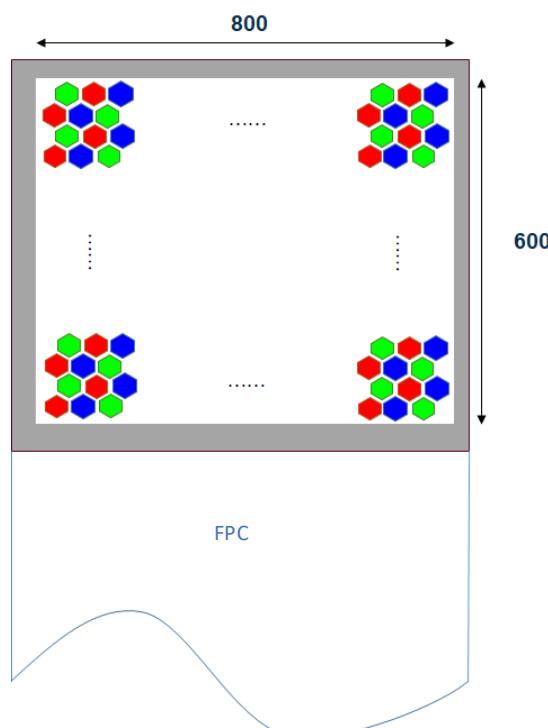

L_{max} : The measured maximum luminance of all measurement position.

L_{min} : The measured minimum luminance of all measurement position.

7. Pin Description

Pin Description

| Pin No. | Symbol | Type | Description | | |
|---------|--------|--------------|---|---------|--------------|
| 1 | D<23> | Input | RGB data pin,default R7; | | |
| 2 | D<11> | Input | RGB data pin,default G3; | | |
| 3 | D<22> | Input | RGB data pin,default R6; | | |
| 4 | D<10> | Input | RGB data pin,default G2; | | |
| 5 | D<21> | Input | RGB data pin,default R5; | | |
| 6 | D<9> | Input | RGB data pin,default G1; | | |
| 7 | D<20> | Input | RGB data pin,default R4; | | |
| 8 | D<8> | Input | RGB data pin,default G0; | | |
| 9 | D<19> | Input | RGB data pin,default R3; | | |
| 10 | D<7> | Input | RGB data pin,default B7; | | |
| 11 | D<18> | Input | RGB data pin,default R2; | | |
| 12 | D<6> | Input | RGB data pin,default B6; | | |
| 13 | D<17> | Input | RGB data pin,default R1; | | |
| 14 | D<5> | Input | RGB data pin,default B5; | | |
| 15 | D<16> | Input | RGB data pin,default R0; | | |
| 16 | D<4> | Input | RGB data pin,default B4; | | |
| 17 | D<15> | Input | RGB data pin,default G7; | | |
| 18 | D<3> | Input | RGB data pin,default B3; | | |
| 19 | D<14> | Input | RGB data pin,default G6; | | |
| 20 | D<2> | Input | RGB data pin,default B2; | | |
| 21 | D<13> | Input | RGB data pin,default G5; | | |
| 22 | D<1> | Input | RGB data pin,default B1; | | |
| 23 | D<12> | Input | RGB data pin,default G4; | | |
| 24 | D<0> | Input | RGB data pin,default B0; | | |
| 25 | IM<0> | Input | Use to select the interface type | Command | Display Data |
| | | | IM<0> | 0V | MIPI or RGB |
| | | | | 1.8V | MIPI |
| 26 | ENABLE | Input | Data enable input; | | |
| 27 | SDA | Input/Output | IM<0>=0, Data input/output for I2C; IM<0>=1, use as LSW<0>; | | |
| 28 | VSYNC | Input | Vertical sync input; | | |
| 29 | SCL | Input | IM<0>=0, Serial clock for I2C; IM<0>=1, use as LSW<1>; | | |
| 30 | HSYNC | Input | Horizontal sync input; | | |
| 31 | RSTN | Power | This signal will reset the device and must be applied to properly Initialize the chip. Signal is active low. | | |
| 32 | DOTCLK | Input | Pixel clock input; | | |
| 33 | RL_SEL | Input | Use to select I2C slave address. (digital test pad in/out pad) | | |
| 34 | DVDD | Output | Regulator output for logic digital system positive power. Connect a capacitor for stabilization. | | |
| 35 | GVDD_P | Output | Regulator output for GAMMA analog system positive power. Connect a capacitor(2.2uF) for stabilization. | | |
| 36 | MVDD | Output | Regulator output for MIPI analog system positive power. Connect a capacitor(2.2uF) for stabilization. | | |
| 37 | ELVDD | Power | Power supply for OLED cell. Connect a capacitor(4.7uF) for stabilization. | | |
| 38 | VDDI | Power | Power supply for D-PHY, DSI and digital part. Connect a capacitor(4.7uF) for stabilization. | | |
| 39 | GVDD | Output | Regulator output for GAMMA analog system positive power. Connect a capacitor(1uF) for stabilization. | | |
| 40 | AVSS | Power | System GND for internal digital/analog system. | | |

| | | | |
|----|---------|--------------|---|
| 41 | GVDD_S | Output | Regulator output for source analog system positive power. Connect a capacitor(2.2uF) for stabilization. |
| 42 | DP<0> | Input/Output | This pin is DSI-D0+ differential clock signal if MIPI Port interface is used. DP0/N0 is differential small amplitude signals. If not used, keep it open. |
| 43 | VGH | Output | Regulator for GOA. Connect a capacitor(1uF) for stabilization. |
| 44 | DN<0> | Input/Output | This pin is DSI-D0- differential clock signal if MIPI Port interface is used. DP0/N0 is differential small amplitude signals. If not used, keep it open. |
| 45 | OTP_OUT | Output | Test pin for debug signal. |
| 46 | AVSS | Power | System GND for internal digital/analog system. |
| 47 | V0 | Power | Regulator for source. Connect a capacitor(1uF) for stabilization. |
| 48 | CKP | Input | This pin is DSI-CLK+ differential clock signal if MIPI Port interface is used. DP1/N1 is differential small amplitude signals. If not used, keep it open. |
| 49 | VGL | Output | Regulator for GOA. Connect a capacitor(1uF) for stabilization. Connect a Schottky diode to GND. |
| 50 | CKN | Input | This pin is DSI CLK- differential clock signal if MIPI Port interface is used. CLKP/N is differential small amplitude signals. If not used, keep it open. |
| 51 | AVEE_S | Output | Regulator for source. Connect a capacitor(2.2uF) for stabilization. Connect a Schottky diode to GND. |
| 52 | AVSS | Power | System GND for internal digital/analog system. |
| 53 | GVEE | Output | Regulator for gamma. Connect a capacitor(1uF)for stabilization. Connect a Schottky diode to GND. |
| 54 | DP<1> | Input/Output | This pin is DSI-D1+ differential clock signal if MIPI Port interface is used. DP1/N1 is differential small amplitude signals. If not used, keep it open. |
| 55 | ELVEE | Power | Power supply for OLED cell. Connect all ELVEE together. |
| 56 | DN<1> | Input/Output | This pin is DSI D1- differential clock signal if MIPI Port interface is used. DP1/N1 is differential small amplitude signals. If not used, keep it open. |
| 57 | ELVSS | Power | Power supply for OLED cell. Connect a capacitor(4.7uF) for stabilization.Connect a Schottky diode to GND. |
| 58 | AVSS | Power | System GND for internal digital/analog system. |
| 59 | RE | Output | OLED Reset Power supply. Connect a capacitor(2.2uF) for stabilization. |
| 60 | ELVEE | Power | Power supply for OLED cell. Connect a capacitor(2.2uF) for stabilization. Connect a Schottky diode to GND. Connect all ELVEE together. |

8. Electrical Characteristics

8.1 Absolute Maximum Ratings

The absolute maximum rating is listed on the below table. When this Micro-OLED product is used beyond the absolute maximum ratings, it may be permanently damaged. It is strongly recommended use this Micro-OLED product within the following specified limits for normal operation. If these electrical characteristic conditions are exceeded during normal operation, this Micro-OLED product will malfunction and cause poor reliability.

| Item | Symbol | Value | Unit |
|-----------------------------|---|-----------------|------|
| Power Supply Voltage (1) | VDDI | -0.3~2.2 | V |
| Power Supply Voltage (2) | ELVDD | -0.3~7 | V |
| | ELVSS | -5.5~0.3 | V |
| MIPI Differential Input | CLKP, CLKN, DATAP0, DATAN0, DATAP1, DATAN1, | 1.32 | V |
| Input Voltage of Interface | Vin | -0.3 ~ VDDI+0.3 | V |
| Output Voltage of Interface | Vo | -0.3 ~ VDDI+0.3 | V |
| Operating temperature | Topr | -20~70 | °C |
| Storage temperature | Tstg | -40~80 | °C |

8.2 DC Characteristic

| Parameter | Symbol | Condition | Min. | Typ. | Max. | Unit |
|--|--------|--------------------|----------|------|----------|------|
| Power & Operation Voltage | | | | | | |
| Digital I/O Input Level @Logic HighR7 | VIH | VDDI=1.62V ~ 1.98V | 0.7*VDDI | - | VDDI | V |
| Digital I/O Input Level @Logic Low | VIL | VDDI=1.62V ~ 1.98V | 0 | - | 0.3*VDDI | V |
| Digital I/O Output Level @Logic High | VOH | Iout = -1mA | 0.8*VDDI | - | VDDI | V |
| Digital I/O Output Level @Logic Low | VOL | Iout = +1mA | 0 | - | 0.2*VDDI | V |
| Digital I/O Input leakage @Logic High | IIHD | Vin = VDDI | | | 1 | uA |
| Digital I/O Input leakage @Logic Low | IILD | Vin = 0 | -1 | | | uA |
| MIPI I/O Power Supply | MVDD | - | - | 1.2 | - | V |
| MIPI Input leakage @Logic High | IIHMD | Vin = MVDD | | | 1 | uA |
| MIPI Input leakage @Logic Low | IILMD | Vin = 0 | -1 | | | uA |

8.3 DSI DC/AC Characteristic

8.1.1 Receiver characteristic

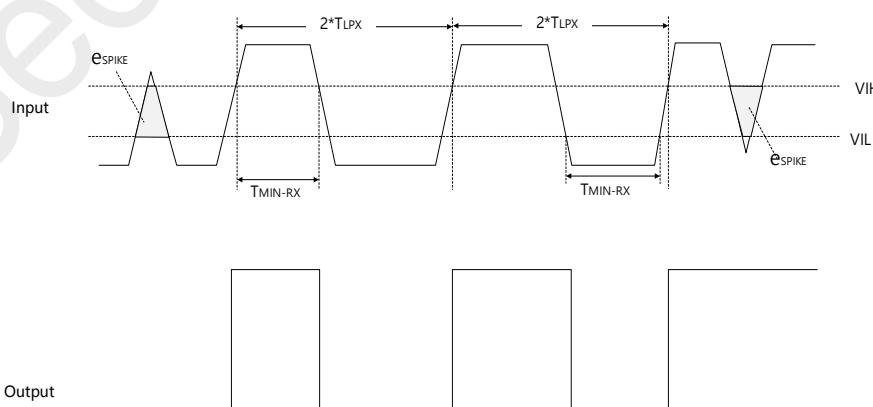

High speed receiver characteristic

| Parameter | Description | Min | Typ. | Max | Unit |
|-----------------------|-------------------------------------|-----|------|-----|------|
| V _{CMRX(DC)} | Common-mode voltage HS receive mode | 70 | - | 330 | mV |
| Z _{ID} | Differential input impedance | 80 | 100 | 125 | Ω |
| V _{IDTH} | Differential input high threshold | - | - | 70 | mV |
| V _{IDTL} | Differential input low threshold | -70 | - | - | mV |
| V _{IHHS} | Single-ended input high voltage | - | - | 460 | mV |
| V _{ILHS} | Single-ended input low voltage | -40 | - | - | mV |
| C _{CM} | Common-mode termination | - | - | 60 | pF |

Low power receiver characteristic

| Parameter | Description | Min | Typ. | Max | Unit |
|----------------------|---|-----|------|-----|------|
| V _{IH} | Logic 1 input voltage | 980 | - | - | mV |
| V _{IL} | Logic 0 input voltage, not in ULP state | - | - | 550 | mV |
| V _{IL_ULPS} | Logic 0 input voltage, ULP state | - | - | 300 | mV |
| V _{HYST} | Input hysteresis | 25 | - | - | mV |
| eSPIKE | Input pulse rejection | - | - | 300 | V·ps |
| T _{MIN-RX} | Minimum pulse width response | 20 | - | - | ns |

8.1.2 Transmitter Characteristics

High-Speed Transmitter Characteristics

| Parameter | Description | Min | Typ. | Max | Unit |
|---|--|-----|------|------|------|
| V _{CMTX} | HS transmit static common-mode voltage | 150 | 200 | 250 | mV |
| V _{OD} | HS transmit differential voltage | 140 | 200 | 270 | mV |
| V _{OHS} | HS output high voltage | - | - | 360 | mV |
| Z _{OS} | Single ended output impedance | 40 | 50 | 62.5 | Ω |
| t _R and t _F (note1,2) | 20%-80%rise time and fall time | - | - | 0.3 | UI |
| | | - | - | 0.35 | UI |

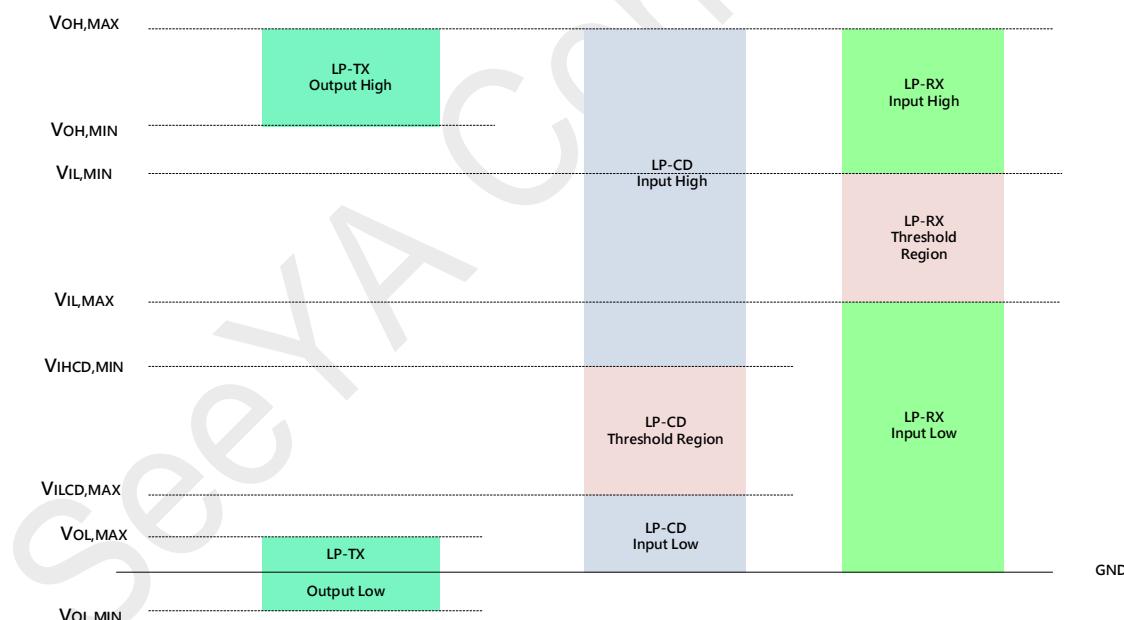

Note:

Applicable when supporting maximum HS bitrates $\leq 1\text{Gbps}$ ($\text{UI} \geq 1\text{ns}$)

Applicable when supporting maximum HS bitrates $> 1\text{Gbps}$ ($\text{UI} < 1\text{ns}$) but $\leq 1.5\text{Gbps}$ ($\text{UI} \geq 0.667\text{ns}$)

Low-Power Transmitter Characteristics

| Parameter | Description | Min | Typ. | Max | Unit |
|-------------------|------------------------------------|-----|------|-----|------|
| V _{OH} | The output high level | 1.1 | 1.2 | 1.3 | V |
| V _{OL} | The output low level | -50 | - | 50 | mV |
| Z _{OLP} | Output impedance of LP transmitter | 110 | - | - | Ω |
| V _{IHCD} | Logic1 contention threshold | 450 | - | - | mV |
| V _{ILCD} | Logic0 contention threshold | - | - | 200 | mV |

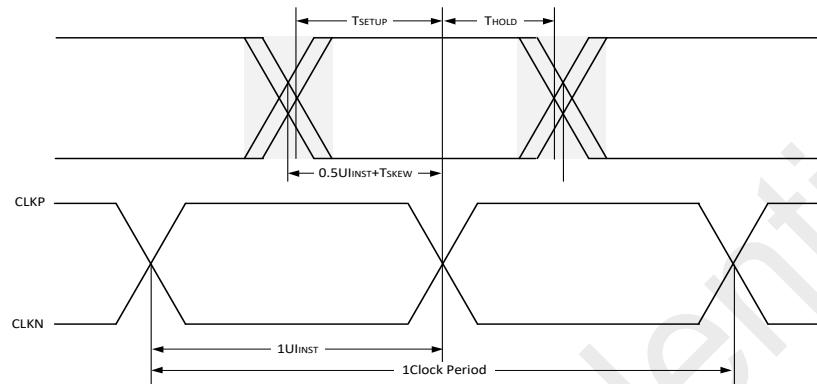

8.4 Timing Characteristics

8.4.1 High Speed Mode Characteristics

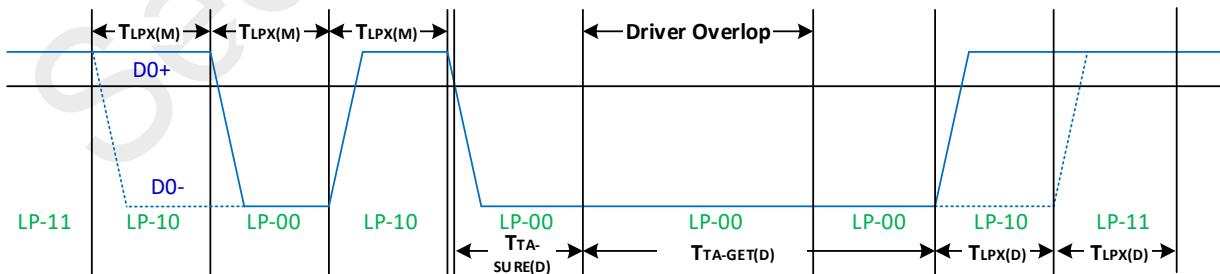

| Parameter | Symbol | Min | Typ. | Max | Unit |
|---------------------------------------|--------------------|-------|------|------|------|
| UI instantaneous | UIINST | 1 | - | 3 | ns |
| T Data to Clock Skew | T _{SKEW} | -0.15 | - | 0.15 | UIHS |
| RX Data to Clock Setup Time Tolerance | T _{SETUP} | 0.15 | - | - | UIHS |
| RX Data to Clock Hold Time Tolerance | T _{HOLD} | 0.15 | - | - | UIHS |

8.4.2 Low Power Mode Characteristics

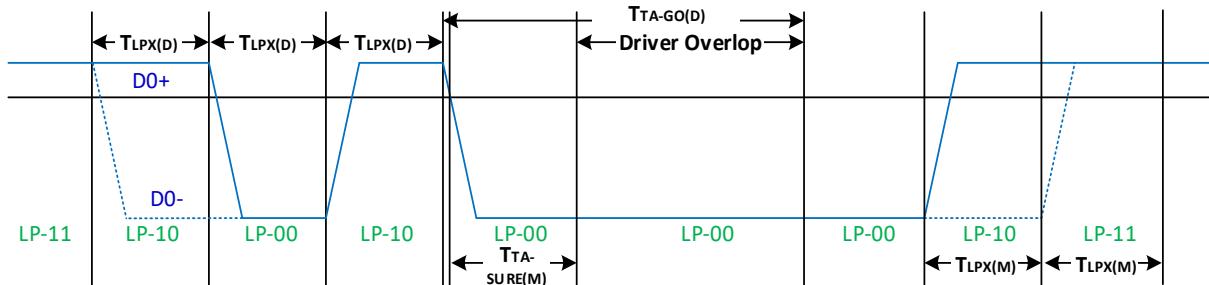

| Parameter | Description | Min | Typ. | Max | Unit |
|----------------------|---|--------------------|------|--------------------|------|
| T _{LPX(M)} | Transmitted length of any Low-Power state period (MCU to display module) | 50 | - | - | ns |
| T _{LPX(D)} | Transmitted length of any Low-Power state period (display module to MCU) | 50 | - | - | ns |
| T _{TA-SURE} | Time that the new transmitter waits after the LP-10 state before transmitting the Bridge state (LP-00) during a Link Turnaround | T _{LPX} | - | 2*T _{LPX} | |
| T _{TA-GET} | Time that the new transmitter drives the Bridge state (LP-00) after accepting control during a Link Turnaround | 5*T _{LPX} | | | |
| T _{TA-GO} | Time that the transmitter drives the Bridge state (LP-00) before releasing control during a Link Turnaround | 4*T _{LPX} | | | |

- Bus Turnaround from MPU to display module

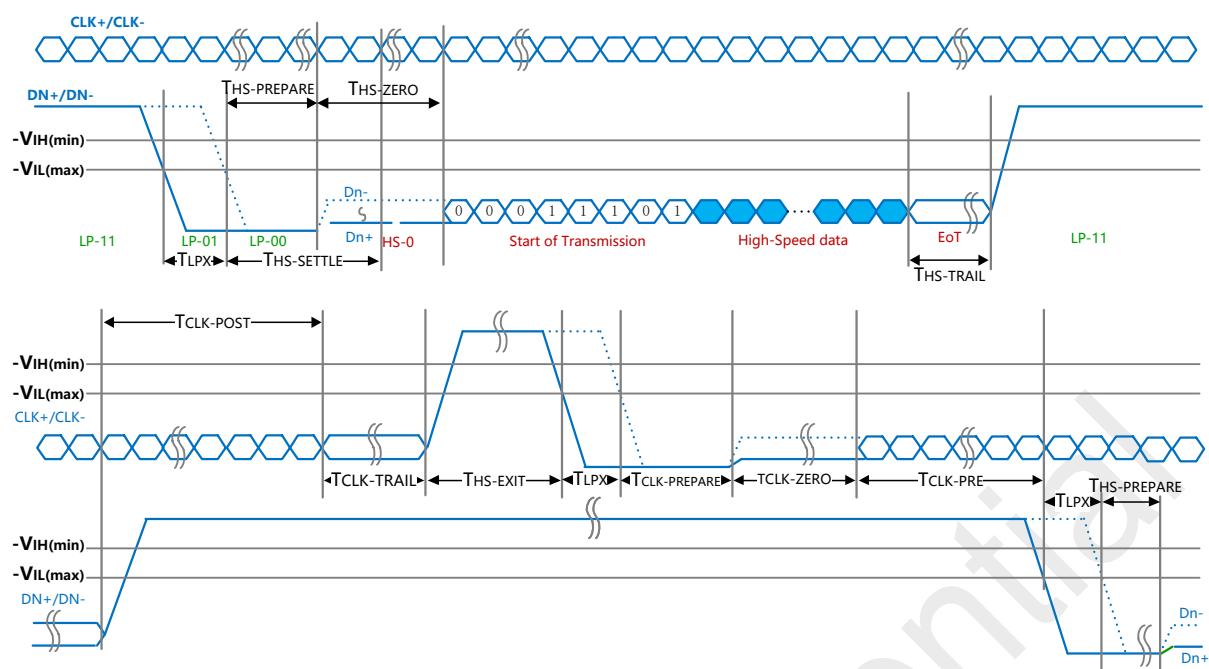

- Bus Turnaround from MPU to display module

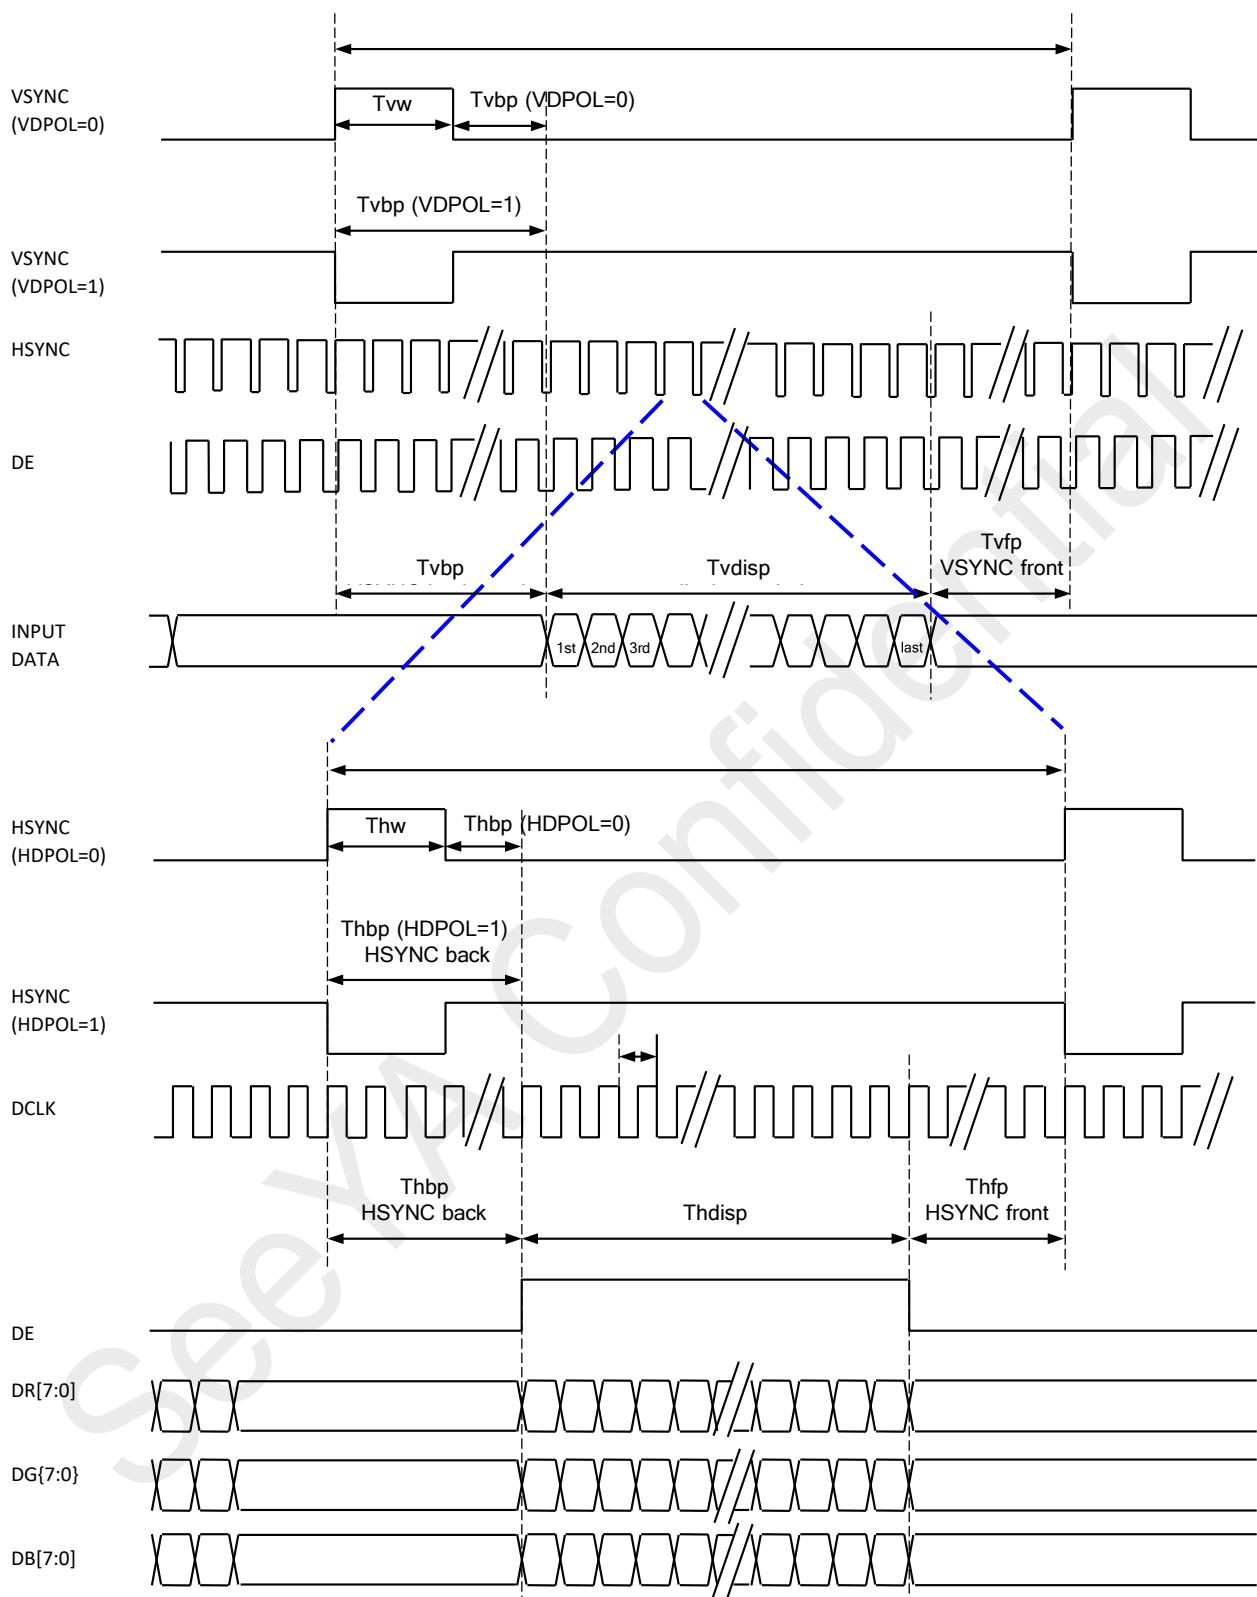

8.4.3 High Speed Mode Operation Timing Characteristics

| Parameter | Description | Min | Typ. | Max | Unit |
|--------------------------------|--|-------------|------|-------------|------|
| $T_{CLK-POST}$ | Time that the transmitter continues to send HS clock after the last associated Data Lane has transitioned to LP Mode. Interval is defined as the period from the end of THS-TRAIL to the beginning of TCLK-TRAIL | 60ns+52*UI | - | - | ns |
| $T_{CLK-PRE}$ | Time that the HS clock shall be driven by the transmitter prior to any associated Data Lane beginning the transition from LP to HS mode | 8 | - | - | UI |
| $T_{CLK-PREPARE}$ | Time that the transmitter drives the Clock Lane LP-00 Line state immediately before the HS-0 Line state starting the HS transmission | 38 | - | 95 | ns |
| $T_{CLK-SETTLE}$ | Time interval during which the HS receiver should ignore any Clock Lane HS transitions, starting from the beginning of TCLK-PREPARE | 95 | - | 300 | ns |
| $T_{CLK-TERM_EN}$ | Time for the Clock Lane receiver to enable the HS line termination, starting from the time point when Dn crosses VIL, MAX | - | - | 38 | ns |
| $T_{CLK-TRAIL}$ | Time that the transmitter drives the HS-0 state after the last payload clock bit of a HS transmission burst t | 60 | - | - | ns |
| $T_{CLK-PREPARE+T_{CLK-ZERO}}$ | $T_{CLK-PREPARE} + \text{time that the transmitter drives the HS-0 state prior to starting the Clock}$ | 300 | - | - | ns |
| $T_{HS-EXIT}$ | Time that the transmitter drives LP-11 following a HS burst | 100 | - | - | ns |
| T_{D-TERM_EN} | Time for the Data Lane receiver to enable the HS line termination, starting from the time point when Dn crosses VIL, MAX | - | - | 35ns+4*UI | ns |
| $T_{HS-PREPARE}$ | Time that the transmitter drives the Data Lane LP-00 Line state immediately before the HS-0 Line state starting the HS transmission | 40ns+4*UI | - | 85ns+6*UI | ns |
| $T_{HS-PREPARE+T_{HS-ZERO}}$ | $T_{HS-PREPARE} + \text{time that the transmitter drives the HS-0 state prior to transmitting the Sync sequence}$ | 145ns+10*UI | - | - | ns |
| $T_{HS-SETTLE}$ | Time interval during which the HS receiver shall ignore any Data Lane HS transitions, starting from the beginning of THS-PREPARE. The HS receiver shall ignore any Data Lane transitions before the minimum value, and the HS receiver shall respond to any Data Lane transitions after the maximum value. | 85ns+6*UI | - | 145ns+10*UI | ns |

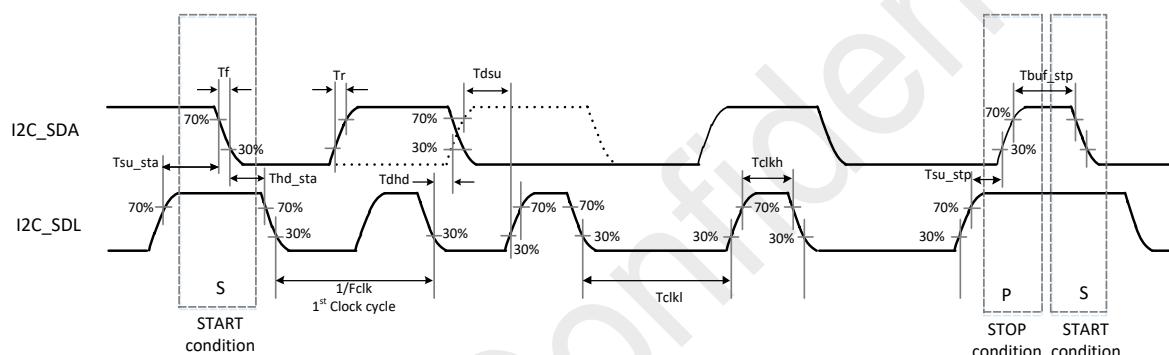

8.4.4 RGB Interface Timing

8.4.5 I2C-Bus Interface Timing

| Parameter | Symbol | Min. | Typ. | Max. | Unit | Condition |
|------------------------------------|----------------|------|------|------|------|-----------|
| I2C Clock Frequency | F_{clk} | - | - | 400 | kHz | |
| I2C Clock Low | T_{clkL} | 1300 | - | - | ns | |
| I2C Clock High | T_{clkH} | 600 | - | - | ns | |
| I2C Data Rising Time | T_{dr} | - | - | 300 | ns | |
| I2C Data Falling Time | T_{df} | - | - | 300 | ns | |
| I2C Data Setup Time | T_{dsu} | 100 | - | - | ns | |
| I2C Data Hold Time | T_{dhd} | - | - | TBD | ns | |
| I2C Setup Time (Start Condition) | T_{su_sta} | 600 | - | - | ns | |
| I2C Hold Time (Start Condition) | T_{hd_sta} | 600 | - | - | ns | |
| I2C Setup Time (Stop Condition) | T_{su_stp} | 600 | - | - | ns | |
| I2C Bus Free Time (Stop Condition) | T_{buf_stp} | 1300 | - | - | ns | |

8.5 Input Video Timing

| Parameter | Symbol | Condition | Spec. | | | Unit |
|--------------------------|--------|-----------|-------|------|------|------|
| | | | Min. | Typ. | Max. | |
| Vertical cycle | VP | - | - | 628 | - | Line |
| Vertical low pulse width | VS | - | - | 4 | - | Line |
| Vertical front porch | VFP | - | - | 1 | - | Line |
| Vertical back porch | VBP | - | - | 23 | - | Line |
| Vertical active area | VDISP | - | - | 600 | - | Line |
| Vertical refresh rate | VRR | - | - | 60 | - | Hz |

Vertical video timing

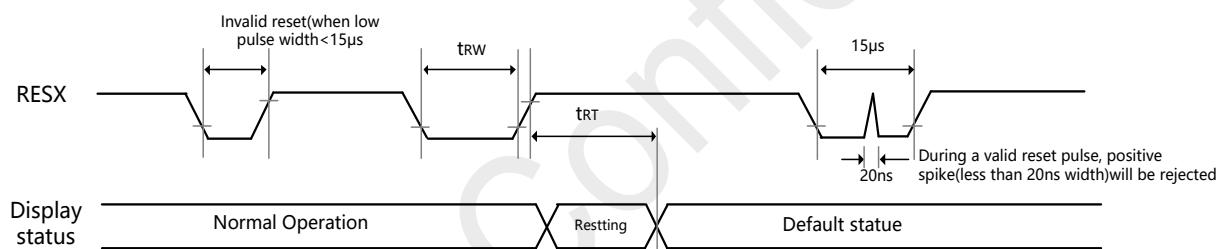

| Parameter | Symbol | Condition | Spec. | | | Unit |
|------------------------|--------|-----------|-------|------|------|------|
| | | | Min. | Typ. | Max. | |
| HS cycle | HP | - | - | 1056 | - | DCK |
| HS low pulse width | HS | - | - | 128 | - | DCK |
| Horizontal front porch | HFP | - | - | 40 | - | DCK |
| Horizontal back porch | HBP | - | - | 88 | - | DCK |
| Horizontal active area | HDISP | - | - | 800 | - | DCK |

Horizontal video timing

8.6 Reset Timing Characteristics

When Reset happens in Sleep-out mode, this Micro-OLED product will enter blanking sequence with the maximum time 120 msec. Then this Micro-OLED product will remain in blanking state and return \ default state. During reset complete time (t_{RT}), data in OTP will be re-loaded and latched to internal registers. This data re-load is done every time when there is an H/W reset and completes within 20 msec after the rising edge of RESX. Therefore, it is necessary to wait at least 20 msec after releasing the RESX before sending commands. Moreover, the Sleep-out command cannot be sent in 120 msec. Spike (less than 20ns width) Rejection can also be applied during a valid reset pulse.

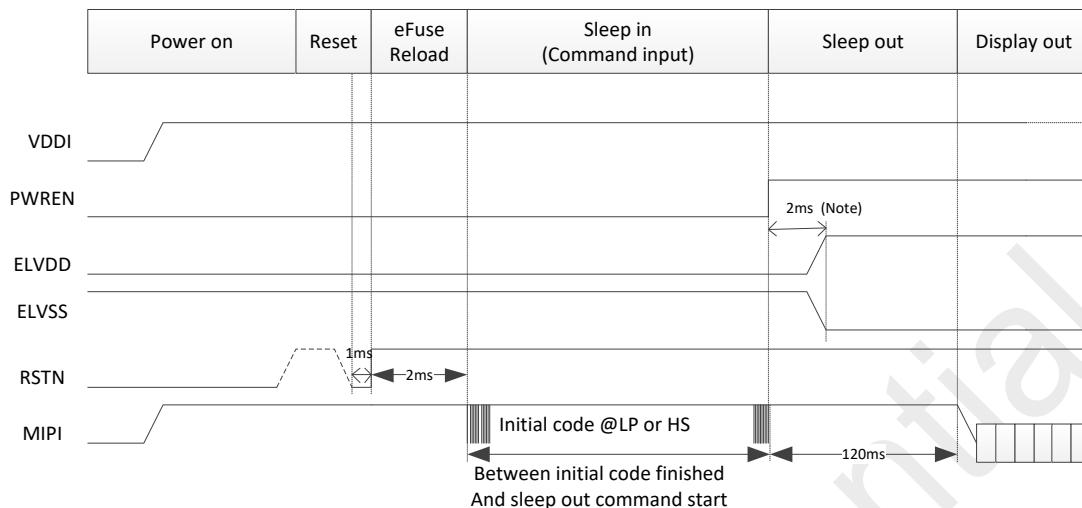

Reset time @VDDI=1.62V to 1.98V, Ta=-40°C to 85°C

| Signal | Symbol | Parameter | Min. | Typ. | Max. | Unit | Description |
|--------|----------|-----------------------|------|------|------|------|--------------------------------------|
| RESX | t_{RW} | Reset low pulse width | 15 | | | us | |
| | t_{RT} | Reset Complete time | | | 2 | ms | When reset applied at sleep-in mode |
| | | | | | 120 | ms | When reset applied at sleep-out mode |

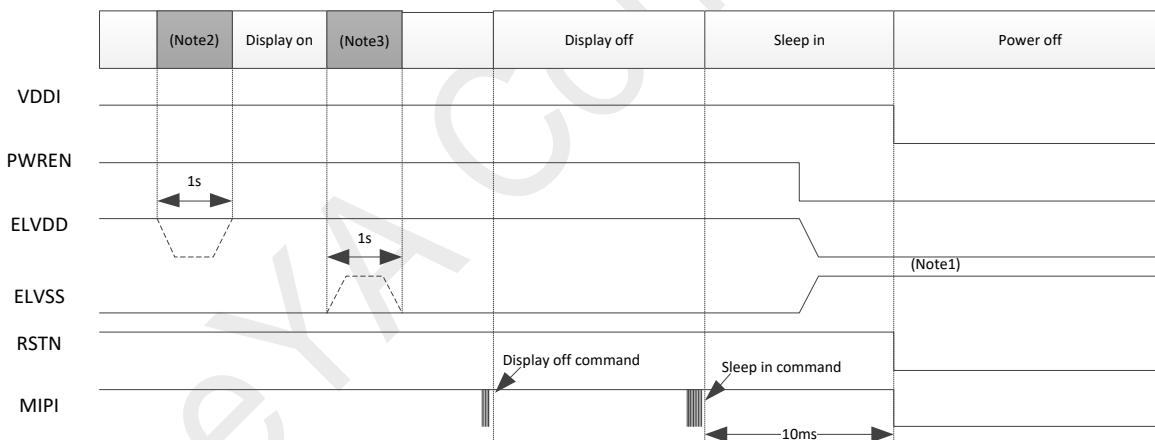

9. Power Sequence

Power on sequence

Note: ELVDD/ELVSS power on timing is depend on power IC, we suggest customer to select power IC that power on timing is $\leq 2\text{ms}$.

Power off sequence

Note:

- 1.ELVDD/ELVSS power off timing is depend on power IC.
- 2.When IC is in display on status, ELVDD abnormal drop occurs. If ELVDD can recover less than 1 second, then IC will return to normal display.
- 3.When IC is in display on status, ELVSS abnormal drop occurs. If ELVSS can recover less than 1 second, then IC will return to normal display.

10. Interface

This Micro-OLED product supports MIPI interface,RGB interface and inter-integrated circuit interface (I2C).

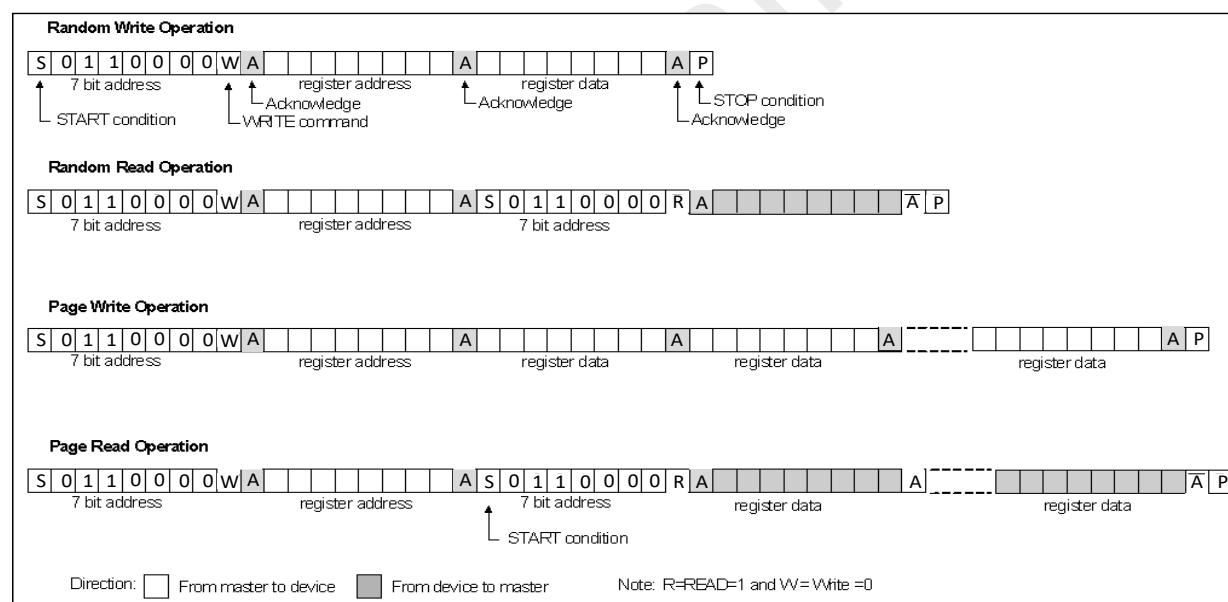

| IM<0> | Command Execute | Image Write |
|--------------------|------------------------|--------------------|
| 0V | I2C | MIPI or RGB |
| 1.8V | MIPI | MIPI |

10.1 I2C Interface

The I2C-bus is for bi-directional, two-line communication between different ICs or modules. The two lines are the Serial Data Line (I2C_SDA) and Serial Clock Line (I2C_SCL). Both lines must be connected to a positive power supply via pull-up resistors. Data transfer can be initiated only when the bus is not busy. The acknowledge takes place after every byte. The acknowledge bit allows the receiver to signal the transmitter that the byte was successfully received and another byte maybe sent. The master generates all clock pulses, including the ninth acknowledge clock pulse.

I2C-Bus Protocol

Before any data is transmitted on the I2C-bus, the device, which should respond is addressed first. The address of SY032 is 0x60 or 0x62. The slave addressing is always carried out with the first byte transmitted after the START procedure.

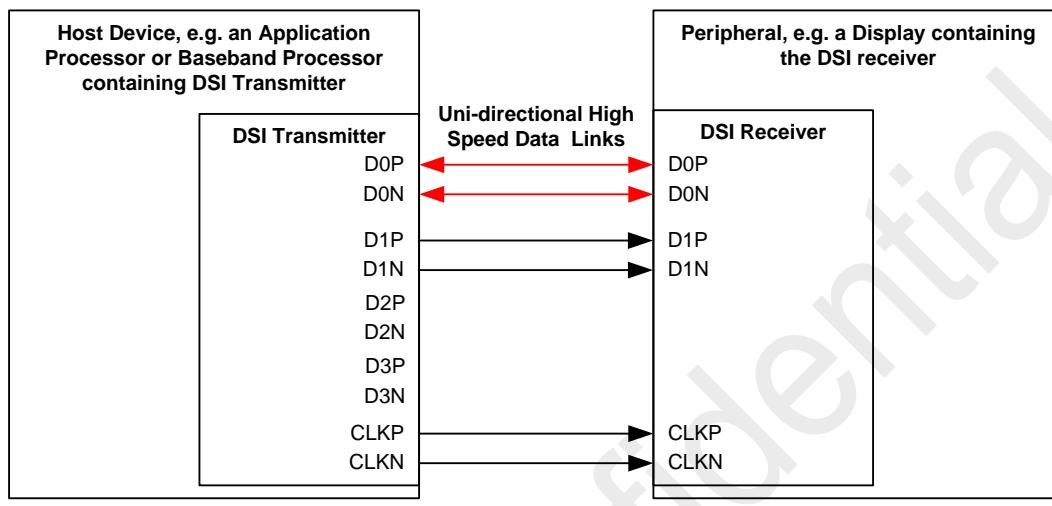

10.2 MIPI Interface

The Display Serial Interface (DSI) specifies the interface between a host processor and a peripheral. DSI builds on existing MIPI Alliance specifications by adopting pixel formats and command set specified in DPI-2, DBI-2 and DCS standards.

Figure shows a simplified DSI interface. DSI sends display data or commands to the peripheral, and can read back status or pixel information from the peripheral. The main difference is that DSI serializes all pixel data, commands, and events that, in traditional or legacy interfaces, are normally conveyed to and from the peripheral on a parallel data bus with additional control signals.

11. User Command

Command list

| Operation | Address | Parameter | R/W | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default (Hex) |

**SWRESET: Software Reset (01h)**

| | | | | | | | | | | | |
|-------------|--|--------------|----|----|----|----|----|----|----|-----|--|
| 01H | R/W | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | HEX | |
| Address | W | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 | 01 | |
| Parameter | W | No Parameter | | | | | | | | | |
| Description | When the Software Reset command is written, it causes a software reset. It resets the commands and parameters to their S/W Reset default values. (See default value in each command description). | | | | | | | | | | |
| Restriction | The host processor must wait 10 milliseconds before sending any new commands to a display module following this command. The display module updates the registers during this time. SWRESET should not be sent when the display module is not in SLPIN mode. | | | | | | | | | | |
| Default | WRITE ONLY, N/A | | | | | | | | | | |
| Flow Chart | <p style="text-align: center;">Legend</p> <pre>graph TD; subgraph Legend [Legend]; SWRST[SWRST] --> BD1[Blank Display]; BD1 --> LSWD1{Load S/W Defaults}; LSWD1 --> SLPIN1[SLPIN Mode]; subgraph HostDriver [Host Driver]; Command[Command] --> P[Parameter]; P --> D[Display]; D --> A{Action}; A --> M[Mode]; M --> ST[Sequential Transfer]; end;</pre> | | | | | | | | | | |

**RDDPM: Read Display Power Mode (0Ah)**

| 2 nd Parameter | R | | | | | DDB2[7:0] | | | | 72 | | | | | | | | | |
| 3 rd Parameter | R | | | | | DDB3[7:0] | | | | 02 | | | | | | | | | |
| 4 th Parameter | R | | | | | DDB4[7:0] | | | | FF | | | | | | | | | |
| 5 th Parameter | R | | | | | DDB5[7:0] | | | | FF | | | | | | | | | |
| Description | | <p>This command reads identifying and descriptive information from the peripheral. This information is organized in the Device Descriptor Block (DDB) stored on the peripheral. The response to this command returns a sequence of bytes that may be any length up to 64K bytes. Note that the returned sequence of bytes does not necessarily correspond to the entire DDB; it may be a portion of a larger block of data.</p> <p>The format of returned data is as follows:</p> <p>Parameter 1: LS (least significant) byte of Supplier ID. Supplier ID is a unique value assigned to each peripheral supplier by the MIPI organization.</p> <p>Parameter 2: MS (most significant) byte of Supplier ID.</p> <p>Parameter 3: LS (least significant) byte of Supplier Elective Data. This is a byte of information that is determined by the supplier. It could include model number or revision information, for example.</p> <p>Parameter 4: MS (most significant) byte of Supplier Elective Data</p> <p>Parameter 5: single-byte Escape or Exit Code (EEC). The code is interpreted as follows:</p> <ul style="list-style-type: none">- FFh – Exit code – there is no more data in the Descriptor Block- 00h – Escape code – there is supplier-proprietary data in the Descriptor Block (does not conform to any MIPI standard)- Any other value – there is DDB data in the Descriptor Block. The format and interpretation of this data is documented in MIPI Alliance Standard for Device Descriptor Block (DDB). <p>DDBs may contain many more data fields providing information about the peripheral.</p> | | | | | | | | | | | | | | | | | |
| Restriction | N/A | | | | | | | | | | | | | | | | | | |
| Default | Power On Sequence / SW Reset/HW Reset : A1h= 0x00, 0x72, 0x02, 0xFF, 0xFF | | | | | | | | | | | | | | | | | | |

12. Reliability

TBD

13. Handling Precautions

- Mounting Method

The MOLEDA panel of SeeYA module consists of one silicon backplane and one cover glass, which can easily get damaged. Since the module is constructed as to be fixed by utilizing fitting holes in the printed circuit board. Extreme care should be used when handling the MOLED.

- Caution of MOLED Handling and Cleaning

When cleaning the display surface, use soft solvent as recommended isopropyl alcohol and wipe gently, don't wipe the display surface with dry or hard materials that will damage the polarizer surface, don't use the following solvent, Water, Ketone, Aromatics

- Caution of Against Static Charge

For MOLED module, use C-MOS drivers, therefore we recommend that you, connect any unused input terminal to VCI or VSS, do not input and signals before power is turned on, and ground your body, work/assembly areas, assembly equipment to protect against static electricity. It could occur static electricity when taping off the film which protects MOLED. Against static charge, you should make sure that the product is safe or not by experiment in advance.

- Packing

The packing principle is that MOLED module should keep its packing condition at the time of delivery. For safety & avoiding the module damage, Carton box must stack the below 4 boxes.

When storing the MOLED after unpacking, note the followings. MOLED module is consisted of GLASS and assemblies. It should avoid pressure, strong impact, and being dropped from a height.

To prevent modules from degradation, do not operate or store them in a place where they are directly exposed to sunlight or high temperature/humidity.

- Caution for Operation

If you do not follow normal POWER ON, OFF sequence or abnormal operating, then MOLED module can be damaged electro-optically and does not recover. Do not change software without SeeYA confirmation.

Response time may extremely delay at a temperature lower than operating range, MOLED does not normally operate at a high temperature. But this may recover at a proper temperature.

When you set optimal operating voltage to MOLED module, you can see the optimal contrast of MOLED. So, add voltage controllable function at SET Module.

MOLED module may not display normally when twisting power or pressing power is added. Therefore, you should secure MOLED module maximum thickness at set assembly not to have any pressure affect MOLED module.

Electro-chemical reaction may occur when there is humidity on pad, therefore, you should use MOLED Module below maximum operating humidity.

MOLED Module Power VDD should be designed to protect surge current at SET Module. You should not damage connector and cable for MOLED module assembly by force folding or by applying extreme power.

MOLED may not display normally when it is interfered by surrounding elements, therefore you should consider setting design not to damage MOLED module by surrounding elements.

To satisfy EMI standards, you should plan your design after considering emitting energy. We can't guarantee display characteristics outside viewing area, therefore your set window should be fixed into viewing area. Image-sticking may occur if MOLED displays same image for a long time, so you need to make a change for MOLED.

- Storage

Place in a dark place where neither exposure to direct sunlight or any fluorescent light is permitted and keep at room temperature & room humidity. Store with no contact with polarizer surface. It is recommended to store them as they have been contained in the inner container when we delivered them.

- Safety Precautions

Disassembly or modification may cause electric shock, damages to sensitive part inside of the AMOLED module, dust adhesion, or scratches on the display part. In the event that the contents of AMOLED module are on skin, wipe them with a paper towel or gauge and wash the part well, and receive medical attention if necessary. Do not use the AMOLED module for the special purpose besides display units. Be careful of the glass chips that may cause injury to fingers of skin, when the display part is broken. For keeping safe quality from outer exposure or contamination, modules should be consumed within 2 months after unpacking.

- Precautions before use

You should discuss the following case with SeeYA:

- in case of any questions about contents of this "Specification for Approval".
- in case of occurring new problems not mentioned at this "Specification for Approval".
- in case of your request about income inspection specification change.
- in case of occurring new problem at your driving test.

*If SeeYA has to change the conditions specified in the specification, previously shall be held and decided.

14. Packing

TBD
