

FINALLY, A DISPENSING NEEDLE DESIGNED FOR ELECTRONICS ASSEMBLY

Tired of tubular needles that drip and clog?

EZ-FLO™ stainless steel Luer-Lok® style needles give you accurate, repeatable volumes. Precision machined from a single piece of stainless steel, EZ-FLO internal profile and surface greatly enhance material flow and performance.

EZ-FLO needles handle all materials -- surface mount epoxy, solder paste, solder mask, and conductive epoxy. Chamfered tips facilitate transfer of material to the dispensing surface. Available in 22-28 gauge in .25" length.

Exactly what an electronics assembler wants. Nothing more, nothing less.
