

INTERFACE COMPONENTS

- AXDSPL-TY1 interface
- AXDSPL-TY1 interface harness
- AXDSPL-TY1 vehicle T-harness Bass knob

APPLICATIONS

Visit axxessinterfaces.com for current application list

Toyota DSP Interface With Pre-Wired Harness 2010-Up

INTERFACE FEATURES

- Includes a DSP (Digital Signal Processor)
- 15 Band graphic EQ
- 4 inputs and 6 individually assignable outputs
- Independent equalization for front, rear, and sub
- Selectable low pass, band pass, and high pass filters
- Selectable crossover slopes; 12db, 24db, 36db, 48db
- Each channel can be delayed independently up to 10ms
- Clipping detection and limiting circuits
- Can be used in amplified and non-amplified models
- Easy behind the radio installation with pre-wired harness
- Internal header port for adding interface modules
- Bass knob included for level control of subwoofer amp
- Settings adjusted via Bluetooth® in a smart device application (tablet or mobile phone), compatible with both Android and Apple devices
- Read, write, and store configurations for future recall
- Password protect feature available in the mobile app
- Micro-B USB updatable

AXDSPL-TY1

TOOLS & INSTALLATION ACCESSORIES REQUIRED

- Crimping tool and connectors, or solder gun, solder, and heat shrink Tape Wire cutter
- Zip ties Multimeter

Google Play Store

INSTALLATION OPTIONS

Adding a sub to a factory system:

This feature offers the ability to add a subwoofer to a factory system. (refer to page 3)

Adding a full-range amp & sub to a factory system:

This feature offers the ability to add a full-range amp and sub to a factory system [†]. (refer to page 4)

[†] The factory amp must be bypassed/unplugged.

16-pin header port:

Inside the interface is a 16-pin header port for adding optional modules (sold separately). Page 5 and 6 will show the installation and use of these modules.

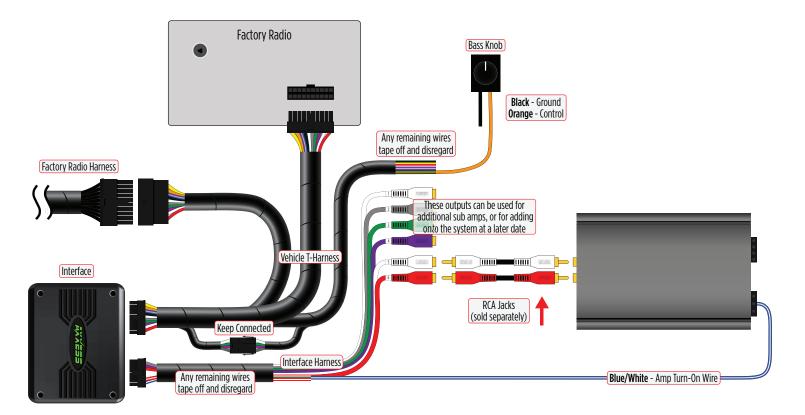

- AXDSPL-BT Bluetooth streaming interface
- AXDSPL-SP Toslink digital output

Note: The interface provides a 12-volt 1-amp output to turn on aftermarket amp(s). If installing multiple amps, an SPDT automotive relay will be required if the amp turn-on current of all amps combined exceeds 1-amp. Use Metra part number <u>E-123</u> (sold separately) for best results.

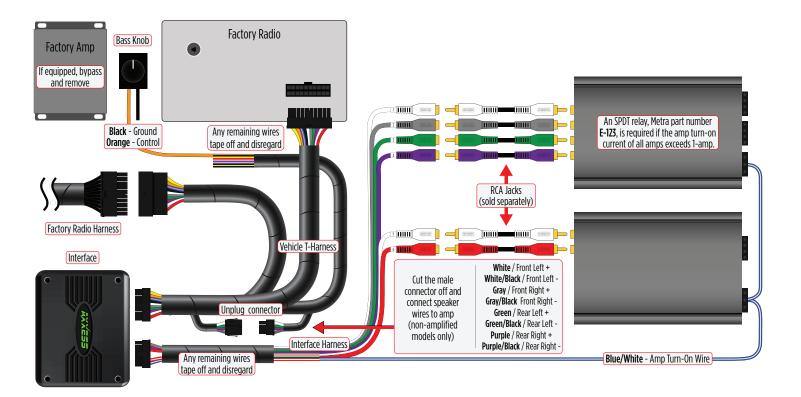

INSTALLATION

- **1.** Remove the factory radio [†], then unplug all connectors.
- 2. Install the **AXDSPL-TY1 vehicle T-harness** to the vehicle and make all necessary connections, but leave the amp turn-on wire disconnected.
- 3. Plug the AXDSPL-TY1 vehicle T-harness to the AXDSPL-TY1 interface.
- 4. Plug the AXDSPL-TY1 interface harness to the AXDSPL-TY1 interface.
- 5. Download and install the AX-DSP-X app from the Google Play Store or Apple App Store.
- 6. Cycle the ignition on.
- **7.** Open the app then select the **Bluetooth Connection** tab. Follow the instructions to pair the mobile device to the interface. Refer to <u>page 6</u> for more information.
- Scroll to the Configuration tab then select the vehicle type. Press the Lock Down ‡ button to save the configuration. Refer to page 7 for more information.
- 9. Connect the amp turn-on wire.
- **10.**Adjust the settings in the app as desired. Press the **Lock Down** ‡ button to save any new configurations.
- [†] Refer to <u>Metra online</u> for dash disassembly. If Metra makes a dash kit for the vehicle, disassembly will be within those instructions.
- ‡ Anytime the interface is locked down the key must be cycled off then back on

ADDING A SUB TO A FACTORY SYSTEM

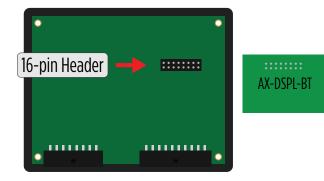

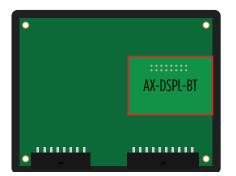

ADDING A FULL-RANGE AMP & SUB TO A FACTORY SYSTEM

BLUETOOTH STREAMING INTERFACE

- The **AXDSPL-BT** Bluetooth streaming interface can be used to stream media directly to the interface.
- While streaming media the volume on the phone will be used. As an option, the **AXBK-1** (sold separately) can be used to control the volume.

Note: The bass knob included with the **AXDSPL-TY1** can be used if it will not be used to control a subwoofer.

- **1. Important!** Unplug the interface from the vehicle.
- **2.** Remove (4) Phillips screws securing the interface, then remove the top cover, exposing the circuit board within.
- **3.** Locate the 16-pin header on the circuit board.
- 4. **Important!** Referencing how the **AXDSPL-BT** is laid out in the picture, carefully line up the header pins to the interface. Gently press down to secure.

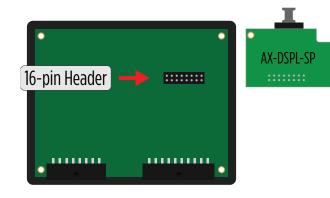

Note: Both interfaces may be damaged if installed wrong.

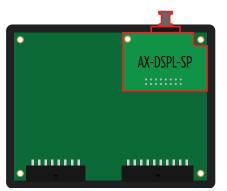

5. Reinstall the top cover to complete the installation.

AXBK-1 Installation:

 Connect the Brown wire from the interface to the Orange wire from the AXBK-1. Ground the Black wire from the AXBK-1.

TOSLINK DIGITAL OUTPUT

- The AXDSPL-SP Toslink digital output can be used for adding a digital output to the interface.
- **1. Important!** Unplug the interface from the vehicle.
- **2.** Remove (4) Phillips screws securing the interface, then remove the top cover, exposing the circuit board within.
- **3.** Locate the 16-pin header on the circuit board.
- **4. Important!** Carefully line up the header pins to the **AXDSPL-SP**, with the Toslink port facing outward. Gently press down to secure.

Note: Both interfaces may be damaged if installed wrong.

5. Reinstall the top cover provided with the **AXDSPL-SP** to complete the installation.

MOBILE APP

Setup Instructions

SETUP INSTRUCTIONS	BLUETOOTH CONNECTION	CONFIGURATION	OUTPUTS		
CROSSOVER ADJUST	EQUALIZER ADJUST	DELAY ADJUST	INPUTS/LEVELS		
Using the vehicle specific harness, install the AX-DSP. The high level outputs from the OEM radio go to the inputs of the AX-DSP. The AX-DSP outputs are low level and should be connected to the amplifier inputs.					
right), and Subwoofer	bass and treble controls fo lance to center.				
Detailed installation the instructions	instructions are available view instruction	RAT	tton below to view		

• General information tab for installing the interface.

Bluetooth Connection

SETUP INSTRUC	BLUETOOTH CONNECT		CTION	OUTPUTS	
CROSSOVER AD	UST EQUALIZER ADJUS		ST	DELAY ADJUST	INPUTS/LEVELS
SCAN	Availa	able Devices			
DISCONNECT	AX-DSP-X Metra 3	9115816	the AX-DSP Hit the SCAI Confirmatio corner of the	o the AX-DSP make sure the ignif is powered up. N Button and select the AX-DSP fr n that you are connected to the D: e screen. ct from the AX-DSP hit the Discor	om the available devices. SP will show in the top left

• Scan - Press this button to start the Bluetooth pairing process, then select the interface once it is found. "Connected" will appear in the top left corner of the app once paired.

Note: The ignition must be cycled on during this process.

• **Disconnect** - Disconnects the interface from the app.

Configuration

SETUP INSTRUCTIONS		BLUETOOTH CONNECTION	CONFIGURATION	OUTPUTS		
CROSSOVER ADJUST		EQUALIZER ADJUST	DELAY ADJUST	INPUTS/LEVELS		
IDENTIFY	Click this button to identify the AX-DSP; the chimes will play					
RESET TO DEFAULTS	Resets the DSP customization settings, will not reset vehicle type. During the reset process, the amplifiers will shu 10 seconds, and then turn back on once completed.					
VEHICLE TYPE	Select the type of vehicle the AX-DSP is installed in					
LOCK DOWN	Stores the current configuration into the AX-DSP					
SAVE CONFIG	Saves the current configuration to your device					
RECALL CONFIG	Recalls a configuration from your device and applies the recalled configuration to the AX-DSP					
ABOUT	Displays Informatio	on about this App and the AX-DSP				
SET PASSWORD	Changes password	for accessing the AX-DSP				

- Identify Click this button to send a test tone to the front left speaker*.
 * Only installations using the front left output (white RCA jack).
- **Reset to Defaults** Resets the interface to factory settings. During the reset process the amp(s) will shut off for 5-10 seconds.
- Vehicle Type Select the vehicle type from the drop down box, then click the apply button.
- Lock Down Click this button to save the selected settings. Attention! This must be done before closing the app or cycling the key otherwise all new changes will be lost!

- Save Configuration Saves the current configuration to the mobile device.
- Recall Configuration Recalls a configuration from the mobile device.
- About Displays information about the app, vehicle, interface, and mobile device.
- Set Password Assign a 4-digit password to lock the interface. If no password is desired, use "0000". This will clear out any currently set password. It is not necessary to lock down the interface when setting a password.

Note: A 4-digit only password must be chosen otherwise the interface will show "password not valid for this device".

Outputs

	SETUP INSTRUCTIONS		BLUETOOTH CONNECTION		CONFIGURATION	OUTPUTS	
	CROSSOVER ADJUST		EQUALIZER ADJUST		DELAY ADJUST	INPUT/LEVELS	
			<u>Ou</u>	Output Chann		<u>els</u>	
#	Location		Group				
1	Left Front	*	None	•	Inve	ert Mute	
2	Right Front	•	None	*	lnve	ert Mute	
3	Left Rear	*	None	-	Inve	ert Mute	
4	Right Rear	-	None	-	Inve	ert Mute	
5	Sub Woofer	-	None	-	Inve	ert Mute	

Output Channels

- Location Location of speaker.
- **Group** Used to join channels together for simple equalization. Example, left front woofer/midrange and left front tweeter will be considered simply left front. The letter **M** indicates the speaker assigned as the master speaker.
- **Invert** Will invert the phase of the speaker.
- Mute Will mute desired channel(s) for tuning individual channels.

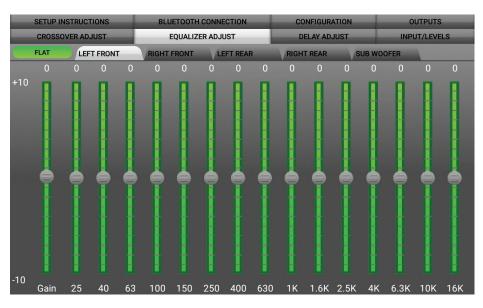

- Select the desired crossover filter per channel, low pass, band pass, or high pass.
- Select the desired crossover slope per channel, 12db, 24db, 36db, or 48db.
- Select the desired crossover frequency per channel, 20hz to 20khz.

Note: The front and rear channels default to a 100Hz high pass filter to keep the low frequency signals out. If a subwoofer is not being installed, change the front and rear crossover points down to 20Hz for a full range signal, or to the lowest frequency the speakers will play down to.

- All channels can be adjusted independently within this tab with 15 bands of available equalization. It is best to tune this by using an RTA (Real Time Analyzer).
- The Gain slider on the far left is for the channel selected.

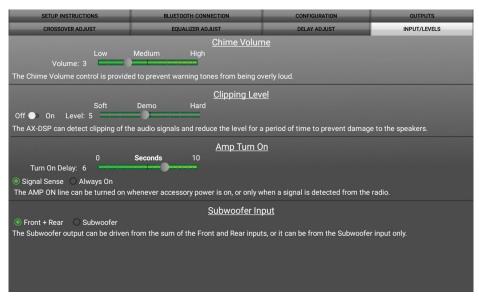

Delay Adjust

SETUP INSTRUCTIONS		BLUETOOTH CONNECTION	CONFIGURATION	OUTPUTS
CROSSOVER ADJUST		EQUALIZER ADJUST	DELAY ADJUST	INPUTS/LEVELS
		Distance from each speaker to 'H	ead' position (in inches)	
Left Front	0			
Right Front	0			
Left Rear	0			
Right Rear	0			
Sub Woofer	0			
Measure the distance	from eac	h speaker to the desired 'Head' position a distance is 99		esponding boxes. Maximum

 Allows a delay of each channel. If a delay is desired, first measure the distance (in inches) from each speaker to the listening position, then enter those values to the corresponding speaker. Add (in inches) to the desired speaker to delay it.

Inputs/Levels

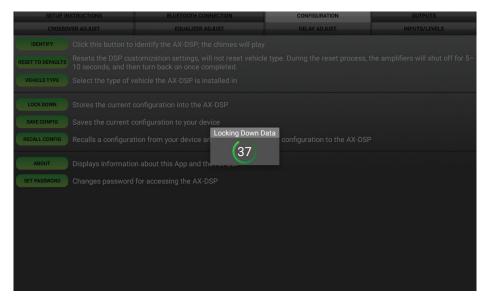

- Chime Volume Not applicable in this application.
- Clipping Level Use this feature to protect sensitive speakers like tweeters from being driven past their capabilities. If the output signal of the interface clips the audio will be reduced by 20dB. Turning down the stereo will allow the audio to come back at a normal level. The sensitivity of this feature can be adjusted to the listening preference of the user.

• Amp Turn On

- Signal Sense Will turn the amp(s) on when an audio signal is detected, and keep on for 10 seconds after the last signal. This ensures the amp(s) won't shut off between tracks.
- Always On Will keep the amp(s) on as long as the ignition is cycled on.
- Turn on Delay Can be used to delay audio output to avoid turn-on pops.
- Subwoofer Input Select Front + Rear

Locking Down Data

Last and the most important. You must lock down your configuration and cycle the key!!!
