

**ALGAE SPECIAL**  
Ayurvedic concentrate of seaweeds  
*Ecklonia maxima*  
125mL

# ALGAE SPECIAL

## AYURVEDIC CONCENTRATE OF *Ecklonia maxima* (SEAWEEDS) 100% PURE WITHOUT ANY PRESERVATIVE

### PRODUCT DESCRIPTION:

**ALGAE SPECIAL** is an Ayurvedic concentrate of specific natural seaweed, *Ecklonia maxima*, with a multiple combination of active substances that gives it a high stimulating potential of vegetative growth for plants.

When using **ALGAE SPECIAL** you can observe:

1. Top rooting effect:
  1. Reduction of mortality of cuttings and young plants.
  2. Balanced and well-developed root system.
2. Maximum growth intensity:
  1. Increased vigor.
  2. Powerful and balanced quick sprouting.
3. Powerful health intensification:
  1. Stimulation of plant defenses against both abiotic and biotic stress.
  2. Prevents premature aging of cells.

### WHEN IS IT APPROPRIATE TO APPLY ALGAE SPECIAL?

1. Weekly to keep plants stimulated and balanced.
2. To overpower plants from stressful situations.
3. To improve the absorption of nutritional elements as an adjuvant.
4. As a restorative of unbalanced plants.
5. To provide extra growth in specific situations.
6. As a supplement to vitamins and microelements.

### APPLICATIONS:

**ALGAE SPECIAL** is used on a weekly basis, or in specific situations where plants need to cope with complicated situations.

1. Foliar spray:
  1. Weekly applications: 1mL/liter of spray water, throughout the growing cycle.
  2. Corrective applications: 2mL/liter of spray water
2. Thru irrigation:
  1. Weekly applications: 3mL/liter of irrigation water, throughout the growing cycle.
  2. Corrective applications: 4mL/liter of irrigation water

2. Hydroponics:
  1. Weekly applications: 2.5mL/liter of circulating water, throughout the growing cycle.
  2. Corrective applications: 3.5mL/liter of circulating water

Todos los productos YUKHA, excepto la gama PROTECTIVA, pueden utilizarse combinados entre ellos sin ningún tipo de inconveniente hasta un máximo de 3 productos en la mezcla.

Tenga en cuenta que mantener un pH neutral pero ligeramente ácido es fundamental para la aplicación de estos productos, por lo que es necesario mantener el pH del caldo de aplicación en torno a 6-6,5.

Conserve los productos en su envase original, bien cerrados y apartados de la incidencia de la luz solar directa, bajo estas condiciones de almacenamiento, los productos YUKHA tienen una vida útil de 24 meses desde la apertura del envase.

El equipo de YUKHA aconseja no sobrepasar las dosis de aplicación recomendadas para evitar desequilibrios fisiológicos en las plantas.

## MORE INFORMATION ABOUT ALGAE SPECIAL

### FORMULA DESCRIPTION:

**ALGAE SPECIAL** is extracted by cold processes to protect the stability and effectiveness of the high contents of active materials that are naturally present in algae and are very sensitive to degradation from high temperatures. In this way, this cold extraction that follows the traditional principles of Ayurveda completely protects the effectiveness of this *Ecklonia maxima concentrate*.

The **ALGAE SPECIAL** content comes only from the *Ecklonia maxima seaweed species*, so it is a completely organic vegetal concentrate. You can be sure that your applications will be completely free from both, animal and chemical products.

### FORMULATION FEATURES:

**ALGAE SPECIAL** stimulates the sprouting and root development of plants very quickly, efficiently and in a good balance.

**ALGAE SPECIAL** is a natural promoter and regulator of the manufacture of hormones that plants naturally produce, highlighting those actively involved in cell division and elongation (vegetative and root growth). Also, by regulating the synthesis of these hormones, their application helps control the excess vigor caused in plants that can lead to unbalanced growth.

**ALGAE SPECIAL** actively helps plants overcome different types of stress both biotic (caused by living organisms such as insects and fungi), and abiotic (drought, excess moisture, etc.), conferring greater resistance against aging of plant tissues (degradation of chlorophyll).

**ALGAE SPECIAL** presents adjuvant effects, which improve the processes of absorption of active ingredients by plants:

1. Wetting effect: spreads droplets on the surface of leaves, roots, and substrates, improving the covering capacity of applications.
2. Adherence: adheres to the drops of application on leaves, roots, and substrates.

3. Moisturizing effect: prevents crystallization of applications, avoiding dehydration of the drops of application broth that stay on the leaves until the application is absorbed.

**“Improving the balance and physiological state of plants thru applying natural vegetal active ingredients means increasing the quantity and quality of final production without compromising on your own health...”**
