TC-24

BROAD SPECTRUM NUTRICITOR

SUPER-CONCENTRATED TECHNICAL PRODUCT

PRODUCT DESCRIPTION:

TC-24 is an Ayurvedic super concentrate of plant extracts in soluble powder form that activates and enhances the energy that plants use for their growth.

DESCRIPTION OF THE FORMULATION:

TC-24 is a grinding that is sifted to get a very fine and clean powder. This powder is obtained from a very special plant species whose characteristic is that its root is very thickened, and this is the part of the plant that is used for this formulation. The extraction process is carried out according to the ancestral principles of Ayurveda.

TC-24 is a 100% water soluble powder.

Since the origin of all the active materials that make up this Ayurvedic formulation are of plant origin, you can be sure that you are applying a product free of chemicals and animal origin.

WHAT COULD I EXPECT WHEN APPLYING TC-24 COMPARED TO OTHER CONVENTIONAL PRODUCTS?

1. Incredibly effective energy: Plants improve the optimization of their energy utilization, reaching maximum growth without causing associated physio-pathologies as the plant self-regulates.
2. Amazing increase in yields: Being the energy utilization of plants optimized, it's then only dedicated to growing, so at the time of production there will be plenty of energy available for flower bud development.
3. Drastic stress reduction: Reduces the risk of stress at the time of switching from the vegetative to productive growth phase, protecting flowering and boosting it to the maximum with that extra available energy.

PREPARATION OF THE DILUTION.

- The very economical content of 100 grams is sufficient for 500 liters of broth.
- A mother solution is prepared and can be stored for up to 12 months.
 - Mother solution:
 - Dilute the 100 grams in 1 liter of water.

- Close the container tightly for preservation in a dry place and away from direct sunlight.
- Solution to apply:
 - 2mL of the mother solution in one liter of water
- **TC-24 is a natural product without any chemical preservative, so it is especially important to ensure that the mother solution does not get dirty. Store the mother solution in a tightly closed and clean bottle.**

APPLICATIONS:

Apply every 7 days from week 2 of cultivation until the week before the onset of flowers enlargement.

1. Foliar spray: 1mL of mother solution per liter of foliar spray water
2. By irrigation: 2mL of mother solution per liter of irrigation water
3. Hydroponics: 0.75mL of mother solution per liter of circulating water

All YUKHA products, except those from the PROTECTIVA range, can be used in combination with each other without any inconvenience up to a maximum of 3 products in the same broth.

Note that maintaining a neutral but slightly acid pH is essential for the application of these products, so it is necessary to maintain the broth pH between 6 and 6.5.

Keep products in their original packaging, well closed and protected from direct sunlight. These storage conditions will allow YUKHA products to have a shelf life of 24 months from the date of opening the container.

The YUKHA team advises to not exceed the recommended dosages of application to avoid plant physiological imbalances.

HOW TC-24 WORKS:

TC-24 activates plants to increase the energy levels they produce for use in their growth so that they will have at their fingertips the possibility of increasing their growth factor in a harmonious but intense way.

TC-24 has a cumulative effect, so, after its last application, plants will have their highest growth rate and this will occur at the time when the plant needs more energy, which is during the change from the vegetative phase to the flowering phase.

TC-24 also reduces the stress that plants can experience at the time hours of light are changed from vegetative phase to reproductive phase (flowering).

“Improving the balance and physiological state of plants thru applying natural vegetal active ingredients means increasing the quantity and quality of final production without compromising on your own health...”
