

YIELD GUIDE

Your handy strain guide
to what Tweed has to offer.

Tweed

Hi. Nice work on requesting the *Yield Guide* – *Your handy strain guide to what Tweed has to offer.* You're one step closer to selecting the strains that are right for you.

We want you and your healthcare provider to be able to make informed decisions when deciding how to select your strains. To assist you in that, we've compiled in depth information on each strain that you won't find anywhere else.

If you still can't decide which strains suit your needs, reach out to Team Tweed by phone or by email and we can walk through the process with you and answer any questions you still have.

Thank you for choosing Tweed.

The descriptions, THC, CBD, genetic composition and terpene profiles found in this document are meant as guidelines that are based on laboratory results of specific lots of Tweed product and may change over time. Nothing in this guide should be considered a guarantee of a strain's potency or genetic profile, and we encourage you to visit our website for the most up-to-date information. All information that we provide is provided as general information, and is not intended to be medical advice, nor is it intended to replace the need to consult a healthcare provider. Rather, we provide this information for discussion between patients and their health care providers who will ultimately make any decisions regarding treatment.

BALMORAL

ABOUT THIS STRAIN.

This strain is a balanced hybrid of indica and sativa that has many similar characteristics to Clearwater. Balmoral is the original in the line of “cheese” strains, named for their distinct spicy cheese smell. Experienced growers grow this strain best, as the flowers often looks ready to harvest before they are fully mature.

Balmoral has been known to help with stress relief and could be a good choice for you if you require pain therapy.

THC, CBD and Terpenography will vary. See product page on website for lot specific data.

YIELD GUIDE
HI@TWEED.COM

We've done our best to design the Yield Guide in a way that gives you all the salient information in a user friendly way. We hope this page break-down helps you differentiate strains from each other, so that you can make the choices that are right for you.

1. THE TWEED NAME: This is the Tweed name of your strain. After all, we don't want you discussing the effectiveness of an AK-47 with your doctor. These are genuine medications, they deserve genuine names.

2. THE "STREET NAME": The "street name" is still provided for those customers who came to trust a certain strain based on its old name. We think it is important to help those customers bridge the gap who want to continue using it.

3. THC & CBD PERCENT: These potency percentages are based on estimates and breeder information. Lab-verified potencies for each individual harvest may vary and those numbers are always available on the Tweed website.

THC: Research has connected THC to pain relieving, immune system regulating, and anti-inflammatory properties. THC is responsible for the euphoria felt from cannabis.

CBD: Research has linked CBD to anti-inflammatory, pain relieving, anti-nausea, anti-anxiety, and muscle relaxing functions of cannabis. Research has also demonstrated that CBD diminishes the psychoactive effects of THC.

4. GENETICS: This genetic information will allow users to identify whether a strain is an indica, a sativa or a hybrid of the two. These numbers are static and will not change from harvest to harvest.

Sativa strains are almost exclusively THC dominant. Although indica strains can also be high in THC, the therapeutic effects of THC are consistently found in sativa strains.

Indica strains can contain higher levels of CBD and more balanced mixtures of CBD and THC. Although not all indicas are CBD dominant, the therapeutic effects of CBD are typically found in indica strains.

5. TERPOGRAPHY: Terpography is unique to Tweed. We explain this visual tool in detail on Page 5.

6. TIME OF USE: Every strain is unique in its effects and appropriate time of use. This section is a simple guide to help you choose accordingly.

7. EXPECT TO FEEL: Information here is based on aggregated anecdotal information and can be used as a general guide. Remember that marijuana is very personal — your experience may differ from the information here.

8. SIMILAR & COMPLEMENTARY: We have curated our strain selection to identify similar characteristics. These suggestions are a good road map to follow as you log your medical experience. Complementary strains often reflect the fact that one may be suited for daytime use, while the other more appropriate for the evening.

Hops, pine needles, lemons, and black pepper may not immediately strike you as having any relation to the other, however they all have one large commonality: their essential oils are four of the most common compounds found in cannabis – called terpenes. Hundreds of terpenes exist in cannabis, but only a few are in amounts substantial enough to be of note; these include d-Limonene, Alpha-pinene, Beta-pinene, Myrcene, Terpeneol and Beta-Caryophyllene.

Each individual cannabis strain consists of a unique terpene profile, similar to a fingerprint. This is why we developed the Terpography™ Map, a quick visual tool to help you understand the unique terpene profile of a specific strain.

UNDERSTANDING THE MAP

The cluster of coloured dots represents the ratios of terpenes to one another. A larger dot represents a higher percentage of a particular terpene in the strain and each smaller dot is scaled to represent its percentage within the profile. The final visual representation is called Terpography™ to combine the words “terpene” and “topography.” We hope it’s a quick and helpful tool that gives you just a little more insight into selecting the strains that are right for you.

Pinene (Alpha & Beta)

Found in pine needles and emits a pine, sage, or rosemary scent.

Beta Myrcene

Found in hops, bay leaves, and lemongrass and emits an herbal, rooty, and spicy scent.

d-Limonene

Similar to the scent you experience when you peel an orange, the existence of d-Limonene terpenes in some cannabis strains produces a strong citrus scent and flavour.

Terpineol

Found in a variety of sources such as cajuput oil, pine oil, and petitgrain oil and has a pleasant odor similar to lilac.

Beta-Caryophyllene

Found in a variety of herbs and spices, hence the spicy flavour, and although the scent is minor it is described particularly as black pepper.

Yield Guide.

ARGYLE

Nordle 4-7% THC 90% Indica
5-10% CBD 10% Sativa

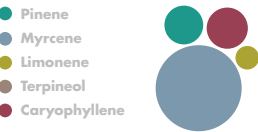

ABOUT THIS STRAIN.

This indica dominant hybrid gives a relatively calm effect. Argyle grows in a Christmas tree shape, producing dense onion/garlic smelling buds. Argyle has a 1:1 ratio of THC to CBD. The original purpose of this strain when it was developed was to make a very resinous plant to produce hashish.

Some people find Argyle to be helpful with reducing nausea, and general pain relief.

THC, CBD and Terpography will vary. See product page on website for lot specific data.

|--------------------|-------------------|--------------------------------------|--|
| BAKERSTREET | Hindu Kush | 14-18% THC 0-1% CBD | 90% Indica 10% Sativa |
|--------------------|-------------------|--------------------------------------|--|

ABOUT THIS STRAIN.

Bakerstreet is the original kush strain and a pure indica, and is surprisingly potent for a non-hybrid strain. This strain has a very strong/dense bud and is fairly easy to tend to. It is the head of the kush lineage, being a precursor to other strains such as the popular OG Kush, which we sell as Bogart.

Bakerstreet could be a good strain for you if you have anxiety or require general pain relief.

THC, CBD and Terpography will vary. See product page on website for lot specific data.

|---------------|----------------|------------------------------------|--|
| BOGART | OG Kush | 14-18% THC 0% CBD | 90% Indica 10% Sativa |
|---------------|----------------|------------------------------------|--|

ABOUT THIS STRAIN.

This indica dominant strain is commonly described as having effects more commonly associated with sativas. If users have found success treating their symptoms with sativa strains but want to try an indica, Bogart would be a good choice. Bogart buds are small and dense with a faint sweeter diesel smell.

If you are looking for a strain with potential benefits in pain therapy, increasing appetite, or reducing stress, Bogart could be right for you.

THC, CBD and Terpography will vary. See product page on website for lot specific data.

| CHEVIOT | Black Widow | 14-18% THC 0% CBD | 50% Indica 50% Sativa |
|----------------|--------------------|------------------------------------|--|

ABOUT THIS STRAIN.

This strain is a balanced hybrid with naturally high THC levels. The bud is very dense and dark, with purplish black hairs. This strain is known to be a vigorous and well-scented plant. The buds will noticeably frost up in the last weeks of the flowering cycle.

Some people find Cheviot helpful in reducing anxiety and stress.

THC, CBD and Terpography will vary. See product page on website for lot specific data.

|-------------------|------------------|------------------------------------|--|
| CLEARWATER | Kali Mist | 13-17% THC 0% CBD | 10% Indica 90% Sativa |
|-------------------|------------------|------------------------------------|--|

ABOUT THIS STRAIN.

Clearwater is typically ideal for any time of day, a good strain for someone who wants to remain productive. The after effect can leave a dry mouth feeling, which can be remedied by drinking plenty of water. Being a 90% sativa, Clearwater grows very tall with very few leaves. The plant uses its energy to produce clusters of fluffy bud.

Clearwater may help reduce stress. It could also be a good option to help with fatigue and pain relief.

THC, CBD and Terpography will vary. See product page on website for lot specific data.

| DONEGAL | Chem Dawg | 16-20% THC 0% CBD | 50% Indica 50% Sativa |
|----------------|-----------|----------------------|--------------------------|

ABOUT THIS STRAIN.

Donegal is a 50/50 hybrid that produces flowers with medium sized tight buds that are caked with crystals.

Donegal was so highly regarded among cannabis breeders that it was the originator of the diesel lineage and a parent to a few of the most popular strains in the world, including our High Lands, Bogart and Yorkshire.

Donegal could be helpful in reducing stress, and may also be a good option for pain relief.

THC, CBD and Terpography will vary. See product page on website for lot specific data.

PRINCETON

Ghost Train
Haze

22-27% THC
0-1% CBD

20% Indica
80% Sativa

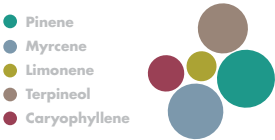

ABOUT THIS STRAIN.

This strain is a popular, sativa dominant choice. It is visually appealing with buds that are coated with crystals. Given the high levels of THC in this strain, users may want to start with very low doses at the outset.

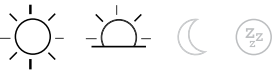

Princeton could be helpful with increasing appetite.

THC, CBD and Terpography will vary. See product page on website for lot specific data.

PADDINGTON

Sour Tangie

22-26% THC
0% CBD

20% Indica
80% Sativa

ABOUT THIS STRAIN.

Paddington brings together the new school of Tangie and old school of our famous High Lands (East Coast Sour Diesel). These two multiple award-winning strains make this cross unforgettable for connoisseurs! This is a very potent and long lasting strain. Effects similar to an espresso alongside the calming experience of a nice cup of tea; all without the drowsiness! An extremely citrusy and sour flavour is due to the abundance of the terpenes; myrcene (herbal/cloves), caryophyllene (spicy/peppery) and limonene (orange/lemon).

THC, CBD and Terpography will vary. See product page on website for lot specific data.

SIXTY THREE

Chocolate
Chunk

16-20% THC
0-1% CBD

90% Indica
10% Sativa

ABOUT THIS STRAIN.

Tweed’s Smiths Falls location opened as a chocolate factory in 1963. This strain’s name embodies the history and evolution of the facility. The growth pattern of Sixty Three is long and mostly clustered in a single cola, not bushy at all. The dense cola is conical in shape and a deep dark green colour.

If you are looking for a strain that could help reduce stress, help manage pain or alleviate nausea, Sixty Three could be right for you.

THC, CBD and Terpography will vary. See product page on website for lot specific data.

| TWILLING | Deep Purple | 11-13% THC | 90% Indica |
| | | 0% CBD | 10% Sativa |

ABOUT THIS STRAIN.

Twilling is a classic indica-style hybrid that retains some mild sativa effects. The genetics of this plant are geared for consistency over time. Dryness of the mouth is a common side effect of Twilling, so have plenty of water available.

Some people find Twilling helps with pain reduction.

THC, CBD and Terpography will vary. See product page on website for lot specific data.

| WATSON | Mid CBD Blend | 7-10% THC 5-8% CBD | 65% Indica 35% Sativa |
|---------------|---------------|-----------------------|--------------------------|

ABOUT THIS BLEND.

This Indica-dominant blend was designed to provide CBD to mid to high THC strains. Watson provides a musky, clove-like smell coupled with a powerful pine scent from its high levels of Myrcene and Alpha-Pinene. A mid THC strain mixed with a CBD rich strain from the Haze family brings together a berry flavour with a lemon twist. Be prepared to enjoy a classic Sativa dominant cerebral effect while also benefitting from a powerful body sensation, often associated with more sedative Indica Dominant strains.

THC, CBD and Terpography will vary. See product page on website for lot specific data.

|--------------|---------------|-----------------------|--------------------------|
| BROWN | Mid Level CBD | 8-12% THC 2-6% CBD | 65% Indica 35% Sativa |
|--------------|---------------|-----------------------|--------------------------|

ABOUT THIS BLEND.

Brown is a great blend for someone looking for mid to low THC and a soothing, CBD-rich experience. This blend consists of 60% Nordle and 40% of a genetic cousin to the famous white berry. Designed for anyone looking to experience a mild relaxing effect, while staying clear headed to get through the day. Brown is the best of both worlds, bringing the cerebral effects associated with a Sativa experience, along with the body-buzz of an Indica dominant plant.

THC, CBD and Terpography will vary. See product page on website for lot specific data.

|---------------|----------|------------------------|--------------------------|
| PORTER | THC Rich | 18-22% THC 0-1% CBD | 80% Indica 20% Sativa |
|---------------|----------|------------------------|--------------------------|

ABOUT THIS BLEND.

Porter is a combination of a heavy, indica-dominant Bogart with the award winning sativa-dominant High Lands and offers a contrasting experience. Both strains have high amounts of myrcene and caryophyllene but High Lands offers a huge amount of limonene - providing a lemon twist to the spicy and peppery taste of Bogart. Being predominantly Bogart allows the blend to be sedative but the touch of High Lands contrasts beautifully to provide some cerebral and energetic undertones through the experience.

THC, CBD and Terpography will vary. See product page on website for lot specific data.

|--------------------|----------------------|-------------------------------------|--|
| LIVINGSTONE | Mid THC Blend | 8-11% THC 1-4% CBD | 60% Indica 40% Sativa |
|--------------------|----------------------|-------------------------------------|--|

ABOUT THIS STRAIN.

This Sativa-dominant blend was created to provide our customers with a product that contains moderate amounts of THC and CBD. Livingstone combines strong earthy and peppery flavours from it’s Myrcene and Caryophyllene content and pairs them with hints of sweet citrus and pine from the Limonene and Pinene content. This blend has a unique scent and taste that you’ll only find at Tweed. Being Sativa dominant, this blend provides classic cerebral effects combined with the relaxing body effects of a CBD strain.

THC, CBD and Terpography will vary. See product page on website for lot specific data.

BARONESS

Royal Medic

12-15% THC
3-5% CBD

25% Indica
75% Sativa

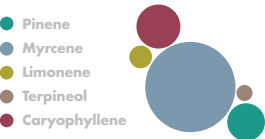

ABOUT THIS STRAIN.

This strain is a sativa dominant hybrid. It provides a very cerebral effect and a clear high that makes it well suited for early or mid day use. These types of strains have been used for their anti-inflammatory, anti-pain, anti-anxiety and/or anti-spasm effects.

The smoke is full-flavoured, there are fruity notes and sweetness in the aroma.

THC, CBD and Terpography will vary. See product page on website for lot specific data.

|-----------------|-------------------------|--------------------------------------|--|
| MAYBERRY | Strawberry Cough | 12-18% THC 0-1% CBD | 10% Indica 90% Sativa |
|-----------------|-------------------------|--------------------------------------|--|

ABOUT THIS STRAIN.

Bred for the taste and smell of strawberries, this is a cross between the Strawberry Fields strain and Haze genetics. People often talk about a smoke expansion reaction which generally results in coughing... hence the street name.

If you are looking for a strain that some people find helpful with stress or pain relief, Mayberry could be a good option.

THC, CBD and Terpography will vary. See product page on website for lot specific data.

TWD LOT#1

Tweed
Proprietary

0-1% THC
2-7% CBD

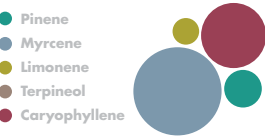

50% Indica
50% Sativa

ABOUT THIS STRAIN.

Bred between a locally grown strain and an unknown strain from Amsterdam. The result is unique to Tweed’s offering, our only strain without THC. You may want to supplement an existing favourite with Lot #1 or use it as an introduction to CBD strains. Excellent for use earlier in the day or by those who are new to cannabis, it has a smooth taste and an earthy aroma reminiscent of freshly cut wheat. The plant produced longer buds that were surrounded by deep purple leaves before trimming.

THC, CBD and Terpography will vary. See product page on website for lot specific data.

| TWD LOT#2 | Tweed Proprietary | 17-21% THC 0-1% CBD | 90% Indica 10% Sativa |
|------------------|------------------------------|--------------------------------|----------------------------------|

ABOUT THIS STRAIN.

This proprietary strain is based on two very different Afghan lines that combine to produce a potent indica. Lot #2 is not for the uninitiated, it will produce a potent cerebral and physical effect. These characteristics may lead customers to use it later in the day or prior to bed.

The plant’s physical characteristics mirror its effects, dense meaty buds with a pungent aroma.

THC, CBD and Terpography will vary. See product page on website for lot specific data.

Yield Guide.

TWD LOT#3

Tweed
Proprietary

0-2% THC
9-13% CBD

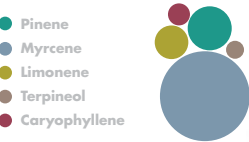

50% Indica
50% Sativa

ABOUT THIS STRAIN.

Our proprietary TWD Lot #3 provides a very calming and comfortable experience. With an incredibly low level of THC, this strain is fantastic for those looking for limited cerebral effects while providing long lasting body relief with a high CBD kick! Often used as an all day strain as it provides relief without much drowsiness. TWD Lot #3 is high in myrcene providing an herbal, clove like smell which contrasts beautifully with the second highest terpene, pinene, providing a pine infused undertone.

THC, CBD and Terpography will vary. See product page on website for lot specific data.

|-------------|------------------|-------------------------------------|--|
| NOVA | Pennywise | 8-10% THC 2-5% CBD | 85% Indica 15% Sativa |
|-------------|------------------|-------------------------------------|--|

ABOUT THIS STRAIN.

Pennywise will be available at Tweed for a short time. Our offering will be milled, as the buds were not very dense. The effect of this product will be mild with a moderate amount of CBD and THC. Best time of use is earlier in the day.

Nova will produce a euphoric effect with moderate physical attributes.

Be advised that Nova will not be replanted at Tweed.

THC, CBD and Terpography will vary. See product page on website for lot specific data.

| PROSPECTOR | Blue Widow | 12-16% THC 0% CBD | 50% Indica 50% Sativa |
|-------------------|-------------------|------------------------------------|--|

ABOUT THIS STRAIN.

This balanced genetic cross between two classic strains, white widow and blueberry, brings a relaxing effect to all. This strain is also often called white berry, berry white and blue venom. A mid THC strain, Prospector brings a calming physical and cerebral experience, which many describe as powerful, yet subtle. For those looking at experiencing some evening cerebral effects, ending with drowsiness to help induce sleep, Prospector will be the answer for you.

THC, CBD and Terpography will vary. See product page on website for lot specific data.

Vaporizing is a way to inhale the bioactive components of medical marijuana while avoiding the burning of plant matter. Vaporization is possible because the “crystals,” which contain the main therapeutic components of marijuana, are converted to vapor at a lower temperature than it takes to burn the plant matter. Vaporizing is an effective alternative to smoking, and provides the same therapeutic effect while reducing exposure to harmful compounds resulting from the burning of plant matter.

HOW VAPORIZING WORKS.

Vaporizing requires a specialized device traditionally called a vaporizer (also known as a nebulizer), which can vary in size, make and customizability. Tweed provides vaporizers to registered customers at heavily discounted prices in order to encourage the use of this method.

Using a vaporizer involves the placement of marijuana into a chamber where it is progressively heated past the boiling point of each bioactive component, but not high enough to cause the plant to burn. The vapors are collected into a secondary chamber, or are directly inhaled by the patient.

Vaporizing is most effective when the marijuana is cut up into smaller pieces. Use scissors or a hand held marijuana grinder to prepare your marijuana for use in a vaporizer.

VAPOR POINTS.

Many vaporizers offer the ability to change the set temperature, which can impact the amount of bioactive cannabinoids that are present in the vapor. Research using the Volcano® vaporizer found the delivery efficiency highest at around 226°C (439°F), falling to about half efficiency at 150°C (302°F) to 180°C (356°F) depending on material.

Vaporizers require sufficient time to heat up and properly vaporize the bioactive components of the cannabis plant. The required lead-in (or preparation) time for using a vaporizer is why some patients continue to smoke marijuana to address acute flare-ups of symptoms.

To support customers, Tweed offers a variety of high quality vaporizers, including the Health Canada approved Volcano Medic at exclusive, discounted prices.

VAPORIZERS

We offer a wide variety of vaporizers for you to choose from at exclusive, discounted prices.
