## Detailed FAQ

- Q: Why are there abnormalities in traffic usage?  
 Note: When the cell phone establishes a connection with the car, it is not necessary to use mobile network data.  
 A: 1. The car will automatically updates when connected to the Wi-Fi network. If there is an update, please try to update using another WiFi network.  
 2. When enter to Wireless CarPlay, please do not manually connect to the device WiFi, which will cause your phone to use the device's WiFi network traffic. If you did it, please click "Ignore this network" on the WiFi hotspot you are connecting to after connecting to CarPlay.
- Q: Which USB port of the car should the product be plugged and why does it keep powering up after getting off?  
 A: You can use a separate car charger or power the device through the car USB. The device will power off in 15 minutes after the car completely stop.
- Q: The product cannot be connected when it is in the underground parking lot.  
 A: Due to Tesla's security mechanism, when a WiFi hotspot is detected to be unable to provide network will actively disconnect from the network. Please use a carrier with better signal coverage according to your current network environment
- Q: The phone cannot establish a connection  
 A: Please check whether the 4G network is normal (indicator) and whether the SIM card does not work or no network. In accordance with the car's security policy, product's WiFi will only be turned on when a 4G network connection is established.(it is used for Wireless connectivity and automotive network connectivity)

- Q: Lyrics cannot be displayed.  
 A: This function needs music APP supported. Please try to use other music APP which support this function.
