The City of Adams Baseball Diamonds

THE BASEBALL DIAMONDS

After receiving a generous donation with a portion specifically dedicated to lighting the local baseball diamonds, the small town of Adams, Wisconsin required a reliable lighting partner. After researching several different options, the City of Adams determined the team at Wisconsin Lighting Lab was the best fit for this very important job.

Not only did WILL have the extensive knowledge and complete product catalog required to complete the project, the company manufactured and engineered all of its LED light fixtures right in Wisconsin. The best part of the partnership? After reviewing project quotes, the community was thrilled to learn they would be able to light not just one or two of the fields, but all three while staying within their target budget.

THE WILL SOLUTION

To complete this important and extensive lighting project, the team at Wisconsin Lighting Lab selected its premium sports lighting fixture, the Helios Olympia. The 470w, 6-engine high-output LED light fixtures were mounted on 50 foot round tapered steel poles for optimal light placement. To prevent light spill from disrupting neighborhood homes, the fixtures were equipped with GlareKiller visors, which redirect light back onto the ball diamond.

These professional-grade fixtures, combined with the custom aiming diagram provided by the WILL engineering team, ensured the fields would adhere to Little League standards with 50/30 foot candles in the infield and outfield, respectively. While the competitive pricing provided by Wisconsin Lighting Lab meant the town could light three fields for the price of one, no corners were cut when outfitting these fields.

"The City of Adams would like to thank you. You guys just really did a phenomenal job. We were really impressed with all the materials that you gave us to be able to make a good decision, and we do feel like we made the best."

- Roberta Pantaleo, City Council President

Project Location:

Adams, WI

Application:

Baseball Diamond

Project Type:

New Installation

Number of Poles:

12

Number of Fixtures:

72

Foot Candles:

50/30

Helios High-Output LED Sports Light with Glarekiller System
