MRS PACK RAFTS

The story of MRS started in 2007. The founder and his friends are outdoor enthusiasts, who have a passion for nature. Out of his love for water sports, he tried out many different rafts, kayaks and packrafts but none satisfactorily met his requirements. So he started working on something new by himself. The development process took a long time. New ideas appeared alongside challenges... The founder continued to improve product prototypes and validate functions through rigorous testing. Today, MRS has established itself as a market leading packraft manufacturer, offering state-of-the-art products with support from a dedicated design team. The MRS management team adopts a hands-on approach to design and production. It is our pleasure to share what we have achieved with fellow passionate packrafters.

Micraft series is a classic packraft type. After a long product testing period and regards to customer feedback, MRS improved the technology and redesigned the balance of the bow and stern in the Micraft series. The redesign resulted in a packraft with a sharper and more streamlined appearance and significantly reduced water resistance. Our redesign also guarantees better buoyancy of the front hull, which means more luggage can be carried. The standard Micrafts series uses a traditional velcro based water protection system(C-type). It allows the paddlers to enter the cabin and close the spraydeck quicker and more convenient.

But water will come in the packraft along the life jacket when the waves are too big. You can choose the packraft with the W type spraydeck if you prefer a full-sealed deck.

Friendly for tall friends

Micraft Extra Long is an extended version of the Micraft(40cm longer) and the buoyancy and space of the bow are greatly increased. The Micraft Extra Long is a great packraft for taller persons.

The extended space is good for store a large amount of luggage. You can tie your bicycle on it. After removing the deck, you can load your dog. You can also choose to update this packraft to a simple 1.5 by adding a front cushion for a child. Micraft Extra Long is a changeable model. (The difference with Adventure X2. It is narrower, designed for one-person to row)

More space for your family or dog

Adventure X2 is a more compact two-person packraft equipped with two removable seats. In order to control the weight, there is not much extra space. Adventure X2 is a two-person packraft, while it can also be used as a one-person packraft for tall paddlers. This year we have added a comfortable backrest for the front paddling position as standard equipment for the Adventure X2. The backrest, which is inflatable, is supported by 6 points that

gives you a feeling of being wrapped, comfortable and stable. The backrest is also equipped with quick release buttons so that you can easily remove it from the hull when necessary. By doing this you will gain more free space for your family or dogs. A spraydeck and an airtight zipper internal storage system can also be added to Adventure X2 by your choice.

Easy to put down more luggage

Alligator 2S is a packraft been designed mainly for white water and streams. Its fully sealed spraydeck is completely waterproof and can withstand the pressure of waves. The Alligator 2S is equipped with an adjustable 3-point thigh strap to control the center of gravity. You can make a flexible action to keep the waves down when eddy in. The new version Alligator 2S: The stern and bow has been redesigned, which makes the Alligator 2S more stable while also more agile. The adjustment of the packraft bottom has improved the hull's wear resistance to a certain extent. At the same time, the capability has also been considered in design.

Different height and weight needs. In addition, this model also has an airtight internal storage system version for choice. It will be more interesting by adding MRS soft mount skeg when paddling in the white water.

Packing list

The Alligator 2S Pro has the functions of the Alligator 2S even though there are some improvements:

1. Use 4-point adjustable thigh strap to provide a more agile control response.
2. Strengthen fabric to improve the control ability in white water, the weight is 12% heavier than the normal version.

3. The hull provides a unique black ribbon hull looks.
4. Standard equipment with zipper easier to access the luggage
5. A more attach point for thigh straps that paddlers could adjust it according to their heights
6. The XXL version is with bigger coaming and crossponding spraydeck
7. The XXL version is standard equipped with attach point for foam backrest and adjustable footrest

Tube diameter: 27.5cm

Packing list

MRS Viking self bailer packraft is made based on Alligator XXL Pro model, the most suitable white water packraft. The enlarged packraft also guarantees enough buoyancy. The bottom of the packraft is with 11 drainage holes and a baffle plate is using to reduce water resistance when paddling.

The adjustable inflatable floor (half cover) with low center of gravity is matched with an adjustable inflatable footrest in using. Both can be fold at the front that users can adjust the length to fit themselves.

EVA foam backrest is optional available for MRS Viking self bailer Packraft.

MRS exclusive patented design.

Patent number:CN304973689S

Nomad S1 series and Barracuda R2 are the best packrafts for improved speed because of the longer waterline and streamlined shape.

We have been devoted in improving the Nomad S1D for a long time.

The narrower hull not only reduces water resistance, but also lets you paddle the packraft with less effort.

We use detachable skegs to reduce water resistance and increase the overall stability and tracking. The streamlined hull and special designed MRS skeg reduced the lateral swing, improves the speed of the Nomad S1 series and the Barracuda R2.

The paddlers could choose if they will use the

skegs according to different paddling environment.

Although Nomad S1D has a narrow hull, it is specially equipped with a high seat cushion to avoid paddlers getting squeezed in between the tubes. Eventhough the inner width of the raft is narrow, you still have plenty of space on top of the high cushion seat.

The difference with the Nomad S1 is the patented multi-functional sprayskirt!
 Patent Number: CN304973688S
 Nomad S1 is designed specifically for improved speed in flat water.
 As demand has increased, we have designed a multi-functional sprayskirt.
 The detachable zipper and Velcro will allow you to easily pull the zipper when the temperature r eduction.

The easily detachable spray skirt makes it convenient to clean dirt and sand from the bottom of the packraft.
 By removing the full spray deck, you can easily clean every part of the raft, including crevices and other spots that are normally hard to clean. We recommend to use the skeg when paddling as the skeg will restrain the hull from swinging a nd makes easier paddling.

The model Barracuda R2 looks like a canoe. Compared to the Adventure X2, the Barracuda R2 is longer and narrower. The longer length of the bow and the stern makes it more streamlined. At the same time, the Barracuda R2 also provides great inner storage space and high buoyancy (while being only 20% heavier than the Adventure X2). The stern is equipped with a detachable fin to improve its stability, which greatly improves tracking.

It is suggested to use single-bladed paddles if 2 people in the packraft.

This packraft model won the Champion and was the fastest packraft out of all packrafts in the Nordic slands Adventure Race (NIAR), paddled by the Swedish Hamilton Adventure Team.

Spray skirt types

C type
It is the traditional (classic) packraft waterproof spraydeck, which is easy for you to get in and out from the packraft. But the water could not be well blocked in the white water.

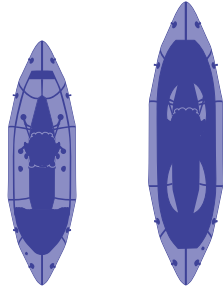

Micorcraft 98L

W type
It provides a fully sealed, non-removable spraydeck. Combining with a sprayskirt, the water could be totally blocked.

Alligator 2S / Alligator 2S PRO

D type
The dual-use spraydeck, which is flexible in using. It could be easily closed and opened by using two waterproof zippers. It applies to different conditions. Most of the water could be blocked by adding a sprayskirt, But the cabin still cannot be 100% dry.

NomadS1 D / Barracuda R2 PRO

Sprayskirt Light

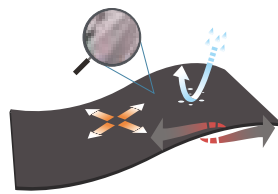

Sprayskirt Light has good water resistance, and is light and thinner. But it is not as strong as the Spray skirt WW. It is good to use the Spray skirt light in the flat water.

EVA Foam Backrest (option available)

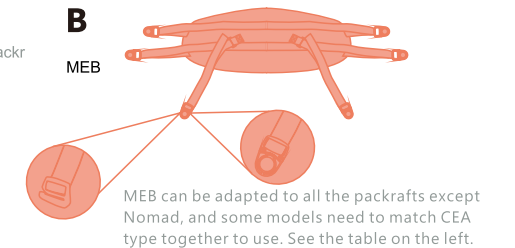

The new MRS adjustable EVA foam backrest, is made of high-elasticity and low-density EVA foam material, the back covered with high-strength nylon tpu fabric. The weight is only 325g, can adapt to different packraft types.

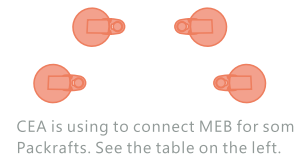

Type A

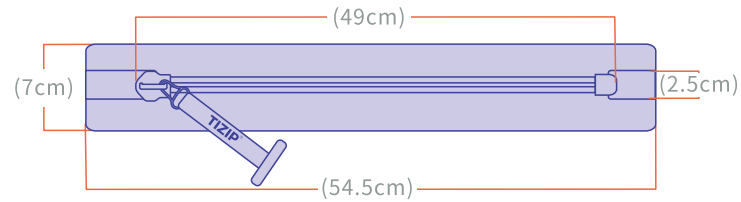

Type B

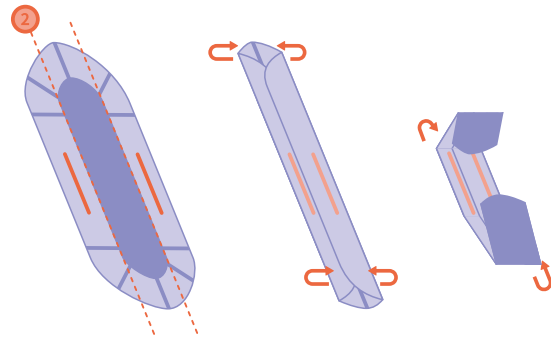

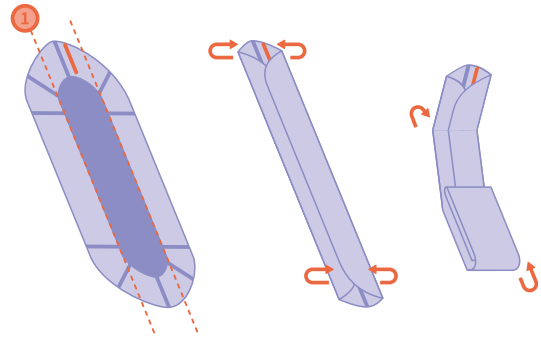

Type C

ISS (Internal Storage System)

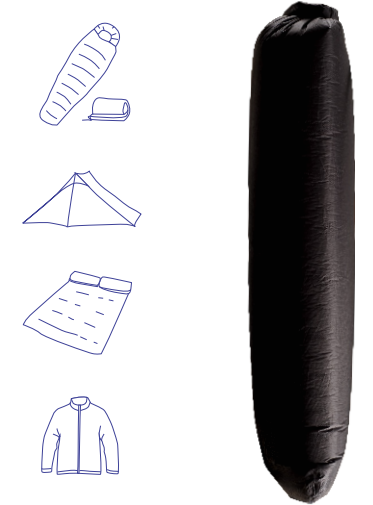

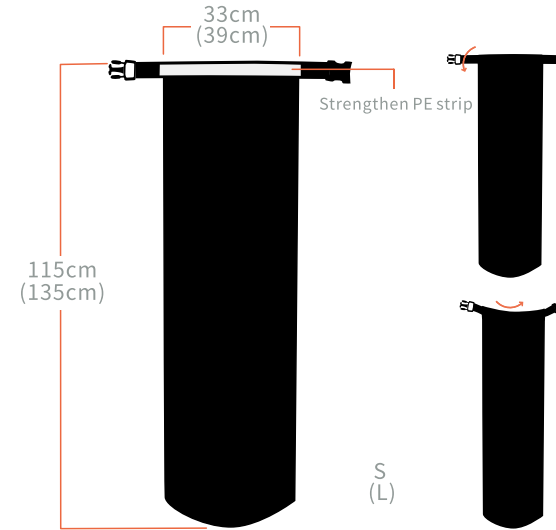

- Keep the zipper clean to avoid particles getting caught in the seal and keeping it open.
- Avoid side stress on the zipper stringers when closing the slider.
- Move the slider in straight direction of the zipper.
- Do not use force to overcome a blocking or if the slider hooks up on the reinforcing strap (if installed).
Pull back remove the cause of the blocking close carefully keeping the stringers parallel.
- Do not overstress the stringers of the open zipper at the ends in sideways direction.
- When not in use keep the zipper dry and out of the sun.

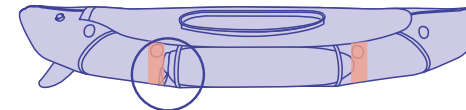

MRS's zipper systems feature top-of-the-line TIZIP zippers. Rubber head, long-term storage, please use silicone grease to protect.

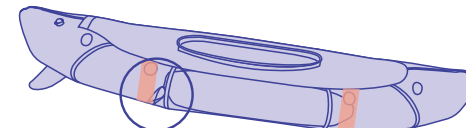

Reinforced storage bags

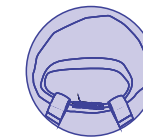

How to use the ISS

Reduce the slippage of the storage bag, keep it stable

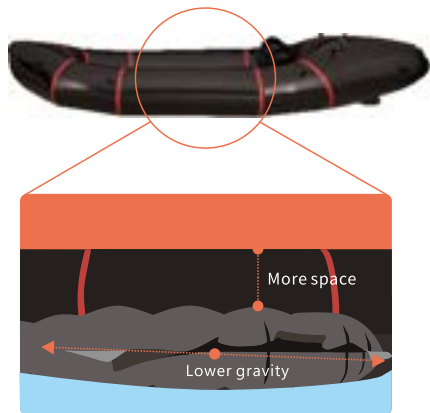

Reduce swing in padding

Swing amplitude

A strengthening strip was added to the opening of the storage bag to give it better sealing effect. The four loops fastened inside also make the bags more stable to prevent them from sliding back and forth.

Adjustable inflatable floor (half cover)

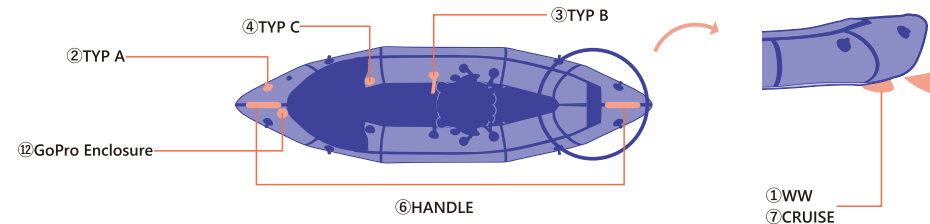

adjustable inflatable floor (half cover)

The adjustable inflatable floor with low center of gravity (half cover) is equipped with adjustable inflatable pedal. Both of them can be folded at the front, so users can adjust the length.
