YOU MAY NEED

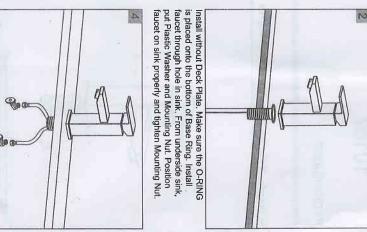

INSTALLATION PROCEDURES

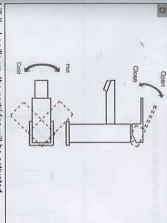

You should clean all the dirts from valve outlets. Turning off the water supply valves. This is usually found near the water meter. If you are replacing an existing faucet, remove the faucet from the sink and clean the sink surface thoroughly.

If necessary, tighten screws using a adjustable wrench until the faucet is firmly connected to the sink.

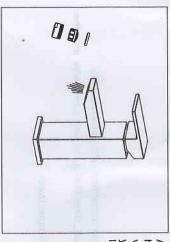

Connect hot and cold water supply lines to the Water Supply Valves.

Lift the handle up, the cartridge will be activated allowing water to flow. The water flow will increase by continuing to rotate handle. Whe handle to the right, the water temperature will decrease to cold flow only. By rotating Handle to the left, the water temperature will increase to hot only.

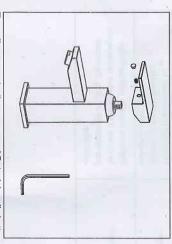

2

Faucet Start Up

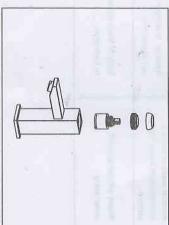

After installation is complete, remove aerator and rotate handle to the closed position. Turn on the water supply valves, and check all connections for a leak. Turn on your faucet and allow both hot and cold water to run at least one minute each. Replace Aerator.

Handle Removal Maintenance

Turn off water and relieve pressure! Detach handle button using a small flathead screwdriver, unscrew set screw using Allen Wrench and take off handle.

Valve Cartridge Removal Maintenance

Remove handles. Unscrew Dome Cap counter clockwise by hand. Unscrew Retaining Nut using adjustable wrench, take out cartridge assembly and inspect. Replace parts as necessary. Reassemble parts by reversing steps.
