

Ocean Waves are 100% polarized sunglasses not only reduce the amount of light that reaches the eye, but also eliminate glare and harmful UV-A & UV-B Ultraviolet light up to 400 NM (nanometers).

1st & 6th LAYERS

Our lenses, made of Crown Glass (used in binoculars, cameras), offer crystal-clear, distortion-free vision and superior scratch resistance.

2ND LAYER

Our mirrors, encased between two glass lenses, are scratch-proof. Vacuum-sealed with 12 coatings, they ensure consistent, distortion-free clarity.

3RD LAYER

Our Polarization features the top-rated film on the market.

4th LAYER

We employ a vacuum sealing method with robust adhesives for a crystal-clear bonding effect.

5th LAYER

We utilize a chemical bonding process for all our scratch-resistant coatings.

7th LAYER

Our Ocean Waves Anti-Reflective coatings are cutting-edge, with seven layers of magnesium hexafluoride thermally applied through a unique vacuum process for consistent, resilient lens interiors. These coatings absorb glare and UV "bounce back."
