LATEX PRINTER

WIDEN YOUR HORIZON

brother

PIEZO ELECTRIC PRINTHEADS

Make the world brighter

With our known Brother printhead quality, you can achieve a **wider color gamut** to reach a print result of up to 1200 dpi.

This color spectrum and high resolution can be achieved with three variable **droplet sizes down to 5 picoliter**, leaving plenty of room for a wide palette of colors and color depth. Smooth gradations, blends and neutral gray tones are therefore effortless.

BROTHER LATEX INK

Print larger with brilliant ink

With our **Latex Ink** developed by Brother you can achieve a high color depth and an excellent print result on a wide range of materials such as PVC, paper, canvas, wall-paper and many more.

Thanks to our **water-based** and **Green Guard Gold certified** ink, the prints are suitable for indoor use as the ink does not outgas.

The two **Brother printheads**, one with an optimizer that prepares the media surface for the CMYK print-head, allow the ink droplets to form a finer dot which results in more accurate colors and images.

RESPONSIBLE SOLUTION FOR YOUR PRODUCTION

Make the world brighter

Our large wide format printer also makes a good impression in production - the automatic gap adjustment saves a lot of valuable time. With our water-based inks, no outgas time is necessary and you're ready to go right away.

The **7 inch touch screen** allows easy and fast handling even in the most stressful situations. Also, the **included high professional production rip software** provides a quick and easy to understand application for the user to start printing in no time.

 **At your side**

Installation and training by an authorized Brother technician.

WF1 SPECIFICATIONS

Machine Size	2884 x 812 x 1550 mm
Machine Weight	240 kg
Print area	259~1615 mm
