### Summary Spectral Analysis:

The spectral analysis gives evidence regarding the general functioning. The occurrence of the various forms of frequencies involve many billions of neurons, which fire sporadically. The activity of the neurons do not go back to a certain stimuli.

The Spectral analysis shows a significant increase in alpha brain wave activity in the right temporal cortex when the Orgone Effects® Australia **energized insoles** were worn (Ener-Soles).

**Medical Interpretation:** It has been medically interpreted that having the Orgone® Effects Australia Ionic infusion into body wear or body accessories (**Ener-Soles**) promotes a relaxed mental state/less stress on the body.

St. Gallen, 13.02.2012
