## **Thank you for buying this high quality appliance**

---

This handbook is designed to help you through each step of owning your new appliance, from installation to use.

Please read through this handbook carefully before you start using your appliance, as we have endeavoured to answer as many questions as possible, and provide you with as much support as possible.

If, however, you find something missed or not covered, please contact our Customer Care Centre, using the number at the back of this handbook, who will be only happy to help you.

Our policy is one of constant development and improvement, therefore we cannot guarantee the strict accuracy of all our illustrations and specifications, changes may have been made subsequent to publishing.

**WARNING:** When positioning the appliance ensure the supply cord is not trapped or damaged.

**WARNING:** Do not locate extension sockets or charging transformers/power supplies adjacent to the compressor as they could overheat.

## Before Using Your Appliance

### Safety Instructions

- After installation make sure that the power cable is not trapped underneath appliance.  
**Please read this booklet thoroughly before installing and switching on the appliance. The manufacturer accepts no responsibility for incorrect installation and use.**
- If this appliance is to replace an old one equipped with a lock, break or remove the lock as a safety measure to avoid children becoming trapped inside.
- This model contains refrigerant isobutene (R134a). Caution is required since isobutene is flammable. It is essential to ensure that refrigerant pipelines are not damaged during transportation and installation of the appliance. Should the pipes become damaged – do not use the appliance until you have been advised to do so by a service engineer.
- Do not damage the refrigerant circuit. In the event that the refrigerant circuit is damaged, avoid open flames or ignition sources and ventilates the room in which the unit is placed – do not use the appliance until you have been advised to do so by a service engineer.
- Do not allow children to play with the appliance. Children must never sit in the drawers or hang from the door.
- Do not plug this appliance into an extension lead.
- Do not use old or damaged power supply cables.
- Do not twist, bend or trap the cable. Cables should also be kept clear of heat sources.
- When plugging in the appliance, always make sure that your hands are dry.
- Your old appliances contain insulation gases and refrigerant that must be disposed properly. Please contact your local authority for information about recycling centre's  
Do not dispose this appliance with household waste.

### Warnings

- **WARNING:** This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety. Children should be supervised to ensure that they do not play with the appliance.
- Do not defrost the appliance with other electrical devices (i.e. hair dryer) or any artificial means and do not use sharp metal objects to remove the ice on the freezer, as this could cause damage to the refrigerant system.
- Do not operate any electrical appliances inside the refrigerator or freezer.
- **WARNING:** Do not place bottles (glass or plastic) containing liquids (especially effervescent liquids) into the freezer as they could cause the bottle to burst during freezing.
- **WARNING:** Do not store explosive substances such as aerosol cans with a flammable propellant in this appliance.
- **WARNING:** Do not damage the refrigerant circuit.
- **WARNING:** Keep ventilation openings, in the appliance enclosure or in the built-in structure, clear of obstruction.
- Do not touch the cooling surfaces while the appliance's operating, especially with wet hands, because the skin may stick to cold surfaces.
- Do not eat ice which has just been removed from the freezer as this can cause freezer burns to the hands and tongue.

---

## Installation

- Install and level the appliance on a floor able to take its weight and in a place suitable for its size and use.
- Insert the plug into a socket which is appropriate. This appliance has a plug already fitted – if the plug is not suitable for your socket we suggest that you call an authorized electrician for assistance. If the plug is damaged in any way – do not attempt to use it. It must be replaced with a new plug.
- Do not install the appliance in direct sunlight and close to heat sources. Do not allow the appliance to be exposed to rain.
- Choose a well ventilated area. There should be at least 10 cm of open space along the sides, top, and back of the freezer.
- Before switching on place the appliance in an upright position and wait at least three hours without moving the appliance. This will give the refrigerant circuit time to settle and operate efficiently.
- Install the appliance in a dry and well-ventilated place. The appliance is for use in places within the temperature ranges defined according to the climatic class given on the Data Label located on the back of the product. The appliance may not operate consistently if it is sited for extended periods of time below the cold end of the climate class temperature range for which the appliance is designed.
- If the appliance is installed next to another refrigerator or freezer, observe the minimum distance of 10cm to avoid condensation.
- **The manufacturer is not responsible for failure to complete installation as described in this guide.**

This appliance is intended for use in households but is not intended to be used in applications such as;

- Staff kitchen areas in shops, offices and other working environments;
- Farm houses and by clients in hotels, motels and other residential type environments;
- Bed and breakfast type environments;
- Catering and similar non-retail applications;

Operating voltage for your fridge is 220-240 V at 50Hz

## Conformity Information

- The appliance is designed in compliance with the Directive 2006/95/EC, IEC60335-2-24, IEC60335-1. Directive 2004/108/EC, EN55014-1:2006/+A1:2009, EN55014-2:1997/+A1:2001/+A2:2008, EN61000-3-2:2006/+A1:2009/+A2:2009 and EN61000-3-3:2008.

---

## Operating Your Appliance

### Parts of the Appliance

- 1、 Lid
- 2、 Seal
- 3、 Basket
- 4、 Control Panel

### The function of the panel:

- Your refrigerator has one control for regulating the temperature. The temperature control is located on the lower right hand corner.
- The first time you turn the unit on, turn the temperature control knob in a clockwise direction to the maximum setting "7" and run for at least 2 hours before putting frozen foods inside. This will ensure the cabinet is thoroughly chilled before food is put in.
- The range of the temperature control is from position "1" the warmest to "7" the coldest. Adjust the temperature control to the setting that best suits your needs. The setting of "4" should be correct for home or office refrigerator use.
- To turn the refrigerator off, turn the temperature control to "0".
- Green light: Power On

#### NOTE:

- Turning the temperature control to "0" position stops the cooling cycle but does not shut off the power to the refrigerator.
- If the unit is unplugged, lost power, or turned off; you must wait 3 to 5 minutes before restarting the unit. If you attempt to restart before this time delay, the refrigerator will not start.
- Large amounts of food will lower the cooling efficiency of the appliance.
- If you choose to change the thermostat setting, adjust thermostat control by one numerical increment at a time. Allow several hours for temperature to stabilize between adjustments.

---

## Temperature Adjustment/Operation

- The appliance temperature can be adjusted by turning the thermostat on the Control Panel.
- The thermostat should be adjusted according to different environment temperature and the quantity of food being stored. The knob rotates clockwise from "1" to "7". The setting should be reduced down in summer (anti-clockwise rotation) and up in winter (clockwise rotation). The thermostat is set to a certain point before leaving the factory, and this is the optimum setting for the product.
- If a large amount of fresh food is placed in the appliance for freezing, the thermostat should be turned up for a period of 4-6 hours, after this period it should be returned to its initial setting.
- Once power is cut off, wait for at least 5 minutes before plugging in again to avoid damaging the compressor or the system.

## Food Storage in the Appliance

**This freezer is a 4 star rated (  ) appliance.**

- The use of a freezer is for freezing fresh food and storing frozen food for long periods of time and making ice cubes.
- Do not put fresh or warm food with frozen food side by side as it can thaw the frozen food.
- While freezing fresh food (i.e. meat, fish etc) divide them into smaller portions, this will allow you to defrost only the food you need.
- **For storing frozen food** The instructions shown on frozen food packages should always be followed carefully, if no information is provided food should not be stored for more than 3 months from the purchased date.
- **When buying frozen food** Ensure that these have been frozen at suitable temperatures and that the packing is intact.
- Frozen food should be transported in appropriate containers to maintain the quality of the food and should be placed into the freezer as soon as possible.
- If a package of frozen food shows signs of humidity and abnormal swelling it is probable that it has been previously stored at an unsuitable temperature and that the contents have deteriorated. Do not use this food, dispose of it as soon as possible.
- The storage life of frozen food depends on the room temperature, thermostat setting, how often the door is opened, the type of food and the length of time required to transport the product from the shop to your home. Always follow the instructions printed on the package and never exceed the maximum storage life indicated.

---

## Defrosting and Cleaning

- Defrost twice a year or when a frost layer of around 7 mm (1/4") has formed. To start defrosting procedure switch off the freezer at the socket outlet and pull out the mains plug.
- All food should be wrapped in several layers of newspaper and stored in a cool place (e.g. fridge or larder).
- Containers full of warm water may be placed carefully in the freezer to speed up the defrosting.
- Do not use pointed or sharp edged objects such as knives, forks to remove the frost.
- Never use hairdryers, electrical heaters and other similar electrical appliances for defrosting.
- When defrosting has finished, sponge out any defrost water which collects at the bottom of the freezer and dry the interior thoroughly.
- You can wipe the inner and outer sides with a soft cloth or a sponge using warm and soapy water.
- Do not wash your freezer by pouring water into it.
- Never use flammable, explosive or corrosive material like thinner, gas, acid for cleaning.
- Make sure that your freezer remains unplugged while cleaning.
- Once defrosting/cleaning has been completed, plug in the appliance and return to its temperature setting.

## Trouble Shooting

The following problems are not causes of breakdown:

Problems	Causes and resolutions
There is a sound of liquid flowing in the freezer.	It is the sound of refrigerant flowing in the circulating pipeline of the refrigerating system, this is normal.
Too noisy	The freezer is not installed in a level ground, change the position
The refrigeration system does not work for a long time but the inside temperature is very low.	It is an indicator of good insulation and low cooling retention, this is normal.

## Trouble Shooting Guide

Troubles	Possibilities		Check up	Solutions	Remarks
Compressor does not work.	Power is off.	The fuse is broken.	Check the fuse	Replace the fuse.	If it is necessary, please contact after-sales service for repair.
		The connection between plug and socket is not good.	Check the socket	Repair or replace the socket.	
		The circuit of input and output is out of use.	Make sure that the power is on	Check the circuit with electric instrument.	
	The thermostat knob is not in the proper position.		Check the thermostat	Rotate the thermostat to the proper position.	Ask for professional help.
Compressor keeps working.	The temperature inside is too High.	Frost on the evaporator is too thick.	Check whether the frost is thicker than 6-8mm	Defrost regularly.	
		The door is being opened too frequently.		Reduce the times of opening	
		Too much food has been stored at once.		Take out some of the food.	
	The temperature inside is OK.	The ambient temperature is too high .while the thermostat indicates a small number.	Make sure whether the knob is indicating at the "5-6" (or deeper).	Adjust the thermostat knob.	The thermostat knob on "2-4" is better (or proper).
		The thermostat does not work.		Replace the thermostat.	Ask for after-sales service.
Too noisy	The floor is not level.		Make sure that the freezer is placed properly.	Place the freezer properly, or put pad under the castors.	
	The screw in fan or condenser is loose.		The screw is loose.	Rotate the fixed screw.	
	The refrigerating circuits touch each other.			Separate them.	

## Environment Friendly Disposal

*You can help protect the environment!  
Please remember to respect the local regulations:  
hand in the non-working electrical equipments to  
an appropriate waste disposal center*

**BRUHM** products are intended for household use only

**BRUHM** has policy of continuous improvement in product quality and design. The company, therefore Reserves the right to change the specification of its model at any time.
