# **A** Features ■ PCI Express x1 Interface ■ 32-channel Digital Input ■ 32-channel Digital Output ■ Interrupt Trigger via Event/Timer Trigger ■ 3 Independent Programmable 16-bit Down Counters ■ Supports Card ID (SMD Switch) ■ Programmable Interrupt Handling

#### Introduction

The PEX-D64 board utilizes the PCI Express bus and is designed as an easy replacement for the PIO-D64/PIO-D64U series without requiring any modification to either the software or the driver. The PEX-D64 provides 32 Digital Input channels and 32 Digital Output channels that consist of two 16-bit input ports and two 16-bit output ports. The PEX-D64 also includes a 6-channel counter/timer that can use four clock sources, 250 kHz, 500 kHz, 1 MHz, and 2 MHz, which can be sourced from the soldering pad. Three of the six channels can be used for general purposes, such as frequency measurement, event counting or pulse generation, while the remaining channels are for interrupt functions. The PEX-D64 card also includes an onboard Card ID switch that enables the board to be recognized via software if two or more boards are installed in the same computer.
