Effective January 2014.

Warranty Terms and Conditions

Our goods come with guarantees that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure and for compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure'.

The following terms and conditions will apply to all warranty claims.

- a) All items purchased by the Purchaser, where the items are properly applied and operated under the usual conditions of operation (and in accordance with the directions, and observing the warnings, in the Owner's Handbook) are warranted against failure due to faulty materials or workmanship for a period of 12 months from the date of delivery of the items to the Purchaser; such warranty to cover repair or replacement of defective parts at the Company's premises and subject to clause 2. INSPECTION AND RETURN OF GOODS;
- b) All warranties supplied by the Company are limited to compensation of an amount totaling no more than the unit cost price of the item.;
- c) The Company's warranties shall be null and void and to no effect if:
 - i) The items sold are abused or in any respect whatsoever operated outside the limits of the specifications and design;
 - ii) Any defects complained of are caused by fair wear and tear, accident, theft, willful damage, negligence or untrained or unskilled use in the operation or storage of items;
 - iii) The Purchaser in any respect alters the items purchased or adds to them or removes any materials from such items; or
 - iv) The Purchaser fails to immediately notify the Company in writing of any defect or fault in the items purchased or fails to provide full details of any such failure or fault prior to returning the items to the company.
- d) The warranty does not cover items which malfunction as a result of improper installation or misuse, nor any resulting loss or damage either direct, indirect or consequential.
- e) All machines must be fitted with a thermal overload device (e.g. D.O.L. Starter) to maintain warranty coverage.
- f) The foregoing warranties and conditions are subject to the Australian Trade Practices Act 1974, the Fair Trading Acts of each State and Territory of Australia and the Goods Act of the State of Victoria (and corresponding legislation in each State and Territory) and in New Zealand subject to New Zealand Consumer Guarantees Act 1993 where the Act applies to the purchase of items by the Purchaser. The Act shall not apply where items are purchased for the purposes of a business.

INTRODUCTION

From standard aluminum oxide bench wheels to premium ceramic abrasive surface grinding wheels, Norton offers high performance abrasive solutions that can maximise productivity in virtually all industrial applications.

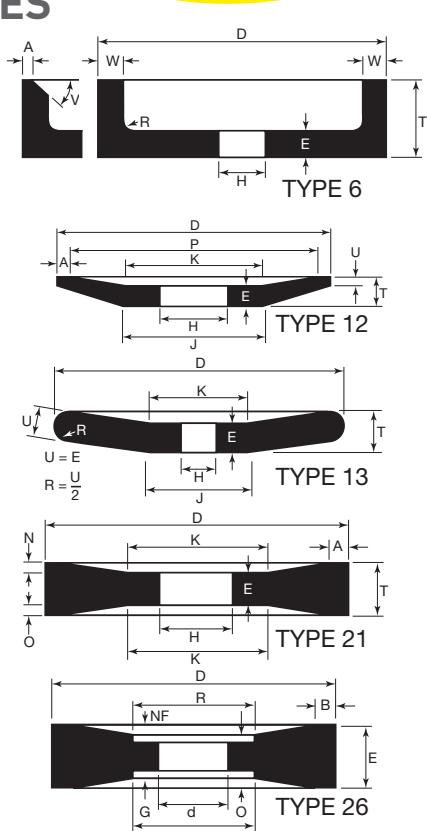

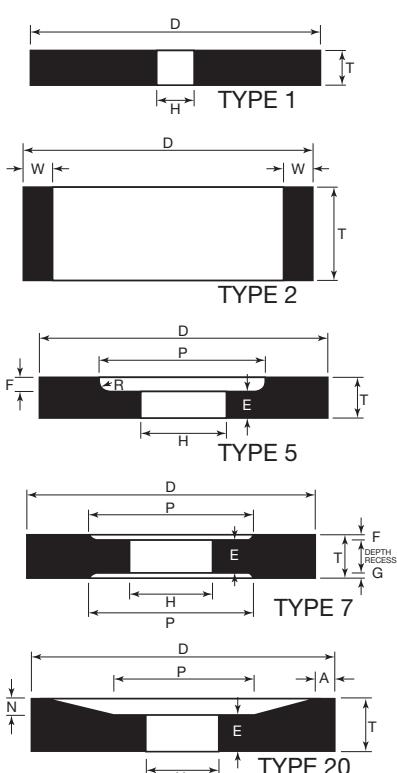

The extensive product range is designed to meet all your precision grinding and roughing application needs, with all the most appropriate abrasive specifications, including grinding wheels, segments, mounted points, dressing sticks and sharpening stones.

Norton, the industry's most comprehensive Bonded abrasive product line.

UNDERSTANDING THE PRODUCT

NORTON WHEEL TYPES

ABRASIVE TYPES

CERAMIC ALUMINIUM OXIDE

Norton SG, Norton Quantum are patented ceramic forms of aluminium oxide that is harder and sharper than conventional abrasive grains. The ceramic grain has a unique microcrystalline structure and when used in a grinding operation this microstructure becomes self-sharpening. This leads to a reduction in the need for wheel dressing and a considerably cooler cutting action.

ALUMINIUM OXIDE

Generally recommended for grinding materials of high tensile strength, such as stainless steel and tool steels, but it can also be used on some high tensile aluminium and bronze alloys. It is manufactured in varying qualities.

SILICON CARBIDE

Harder than aluminium oxide with a very sharp abrasive grain shape. It is recommended for grinding relatively soft materials such as aluminium or cast iron as well as grinding extremely hard materials such as cemented carbide.

ZIRCONIA ALUMINA

For use in rough grinding applications where high stock removal is required. Associated with high tech resin bonds.

GRIT SIZE

The number in the grinding wheel, marking designating grit size, represents the approximate number of openings per linear inch in the final screen size used to size the grain. The following rules should be followed:

USE COARSE GRIT

- For soft, ductile, stringy materials such as soft steel or aluminium
- For rapid stock removal
- Where finish is not important
- For large areas of contact.

USE FINE GRIT

- For hard, brittle materials such as hard tool steels, cemented carbides & glass
- For fine finishes
- For small areas of contact
- For holding small corner radii.

WHEEL GRADE

The grade indicates the relative holding power of the bond, which holds abrasive grains in a wheel. This is represented in the specification by letters running through the alphabet from softest to hardest. The following rules should be followed with regard to grade:

USE SOFT GRADE

- For hard materials such as hard tool steels & carbides
- For large areas of contact
- For rapid stock removal.

USE HARD GRADE

- For soft materials
- For small or narrow areas on contact
- For longer wheel life.

COMMON RANGES OF GRADES

E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U
CYLINDRICAL/CENTRELESS																
SURFACE GRINDING					I.D. GRINDING				TOOL GRINDING							
NON-REINFORCED ORGANIC					THREAD GRINDING				REINFORCED ORGANIC							

BOND TYPES - VITRIFIED

Vitrified bonds are the most common precision grinding bond. Porosity and strength of the wheels made with this bond give high stock removal along with their rigidity helping to attain high precision.

Not affected by water, acid, oils or ordinary temperature variations. The most common vitrified bonds are:

VK/VSC	Used with Silicon Carbide abrasive for range of applications involving non ferrous materials.
VBE	Versatile, high temperature. The original general purpose vitrified bond system used in wide range of applications predominantly for tool room, centreless, cylindrical and surface grinding.
VH	Medium temperature bond used with conventional and ceramic abrasives and recommended for higher speeds. It also has superior form holding ability.
VS	Versatile low temp Bond used with Ceramic abrasives for a wide range of precision applications in precision applications
VSP/VBEP	Induced porosity, this bond suitable for large contact areas and surface grinding
VS3/VS3P	This is a premium bond used with conventional and premium abrasives including Quantum technology for Hi-Tech applications. It is capable of high speeds and is the preferred bond in high demand applications.

BOND TYPES - ORGANIC

These bonds are used in two types of wheels. Firstly, wheels used on portable or fixed machines for the rapid removal of metal. Secondly, cutting-off wheels either un-reinforced or reinforced, for use on portable or fixed machines.

The most common organic bonds are:

SNAGGING WHEELS & CUPS

B3 & B7	Foundry wheels: multi-purpose bond that gives satisfactory results on most applications
B24	Versatile bond suitable for most technical applications
B/B5	Original bonds suitable for wide range of low force applications.
B38	Foundry wheels with Zirconia abrasives
B98	Premium Bond specially developed for Spring Grinding with Quantum technology

APPLICATION GUIDE

CYLINDRICAL GRINDING

Cylindrical grinding includes all outside grinding of round work, even when the finished product is not always a true cylinder. Requirements in cylindrical grinding vary from fast stock removal to ultra smooth (mirror) finishes. Cylindrical wheels are used extensively in the automotive, aerospace, shipbuilding, engine manufacture, turbine manufacture and bearing industry, as well as general shops and tool rooms.

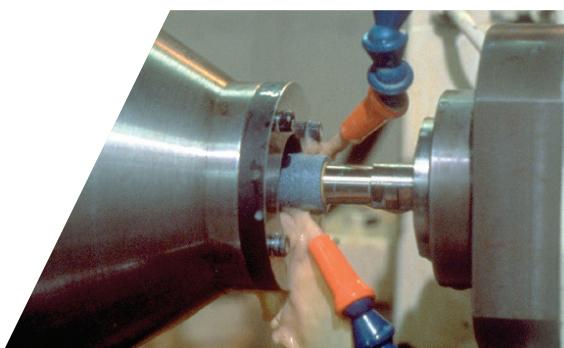

SURFACE GRINDING

The term surface grinding is used to describe the grinding of flat surfaces in which the wheel moves past the workpiece in a flat plane, or vice versa. Surface grinding applications range from heavy rapid stock removal, to precision contour grinding.

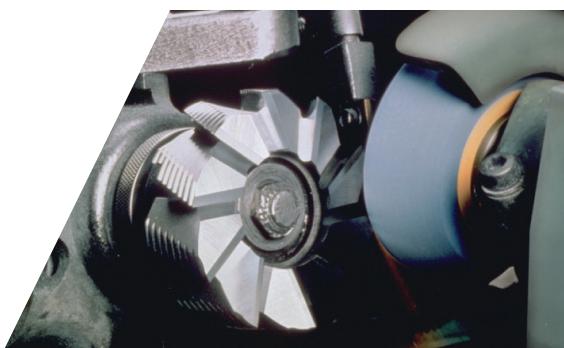

INTERNAL GRINDING

Internal grinding refers to the grinding of bores or holes and is probably one of the most difficult types of grinding. Internal grinding applications range from very rapid stock removal to more controlled processes capable of generating sizes and concentricity measured in microns.

TOOL & CUTTER

Tool room grinding refers to the maintenance and repair of the cutting tools used in manufacturing operations. Wheels of all sizes and shapes are used in tool and cutter applications. Most wheels used are vitrified, in grit sizes 36 to 220, and in grades H through to N.

SAW SHARPENING

Saw sharpening refers to the maintenance and repair of sawblades.

Vitrified flat wheels and cups are used in grit sizes 54 to 60.

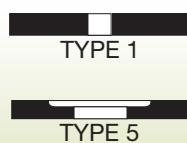

Resin treatment reinforces the wheel and helps reduce wheel face deformation.

BEST

Quantum

FEATURES

- Engineered ceramic grain shape and chemistry with new bond technology
- A perfect blend between sharpness (free cutting) and toughness (life)

BENEFITS

- Versatile in low, medium and high force applications
- 30% to 100% higher metal removal rate
- > 15% lower threshold power

5SG

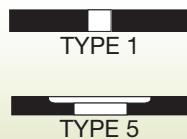

FEATURES

- Very high concentration of SG ceramic aluminium oxide abrasive

BENEFITS

- Ultimate cutting capability
- High removal rate and extended wheel life
- Perfect for technical applications where grinding parameters can be adjusted to optimise performance

SGB

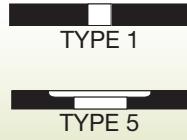

FEATURES

- Medium concentration of SG ceramic aluminium oxide
- Harder and sharper than conventional abrasive grains

BENEFITS

- Good cutting capability
- Suitable for low to medium power machines
- Very versatile on a wide variety of steels

38A

FEATURES

- High purity white aluminium oxide abrasive
- Friable

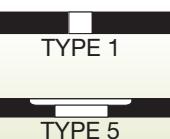

BENEFITS

- Cool and burn free cutting
- Ideal for heat sensitive applications with light to moderate feed rates

GOOD

88A

FEATURES

- Highly refined pink aluminium oxide abrasive
- Tougher abrasive than pure white aluminium oxide
- Contains a small portion of chromium oxide

BENEFITS

- Very versatile
- Reduces dress frequency

19A

FEATURES

- A blend of A and 38A abrasives
- Primarily used in saw grinding applications

BENEFITS

- Very versatile, For use on a wide variety of steels
- Good yield, good removal rate
- Good balance between cut rate and form holding ability

57A

FEATURES

- Semi pure brown fused aluminium oxide abrasive
- High durability

BENEFITS

- For use on all steel and steel alloys
- Versatile, durable and free cutting
- Economical
- Ideal for general purpose applications

A

FEATURES

- Regular brown aluminium oxide abrasive
- Contains 3% titanium oxide
- Unique, self sharpening, microcrystalline structure

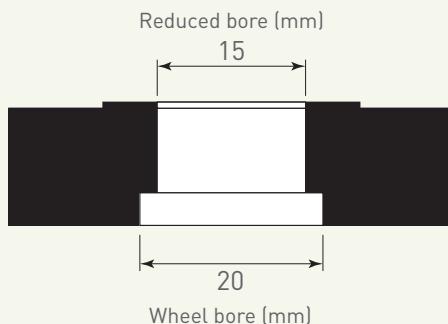

BENEFITS

- Very tough, suitable for grinding most types of steel and soft iron
- Good cost/performance compromise
- Hard wearing wheels for general purpose cylindrical off-hand bench and pedestal grinding applications

REDUCTION RINGS

Plastic reduction rings may be used to adapt grinding wheels to fit on a variety of spindle sizes. These rings reduce the bore hole size, allowing the wheel to be safely mounted on a spindle with a smaller diameter.

- Reduction rings should never come into contact with the flange
- Reduction wheels should not be used on wheels of thicknesses less than 6mm, nor greater than 50mm
- Always use one reduction ring on each side of the wheel when the wheel is thick enough to allow correct seating
- Never use reduction rings to reduce the hole below the minimum specified in the FEPA safety code

WHEEL BORE (mm)	REDUCED TO (mm)	REDUCTION RING

SAFETY ADVICE

SAFETY IN THE STORAGE & USE OF GRINDING WHEELS

Stringent safety standards are maintained throughout the manufacture of Norton Grinding Wheels. To reduce the risk of accidents further, the law requires that certain basic precautions are taken in the storage and use of abrasive wheels.

RECEIPT

On receipt, grinding wheels should be thoroughly examined to see if they show any signs of damage, such as chips, cracks or discolouration.

Damaged wheels must not be used.

HANDLING

Any mishandling that results in the wheel being subjected to any shock loading can damage all grinding wheels. This can occur if the wheel is inadvertently dropped, knocked over or banged against any other object. This is equally true if the wheel is secured on a pallet, which has been dropped heavily from a forklift truck.

Any grinding wheel subjected to such mishandling should be carefully examined for signs of damage.

If in any doubt – do not use.

STORAGE

Small wheels up to 80mm diameter, together with cones, plugs, mounted points and wheels may be stored in suitable bins, drawers or boxes. Type 02 cylinder wheels, type 06 straight cup wheels, type 12 dish wheels and type 13 saucer wheels should normally be stacked on flat sides with cushioning material between them. Thick rim and hard grade cylinder and straight cup wheels may be stored on their periphery as for plain wheels. Soft grade, straight cup wheels, and all type 11 taper cup wheels, should be stored base to base and rim to rim, to prevent chipping of edges and cracking of walls. Thin plain wheels, such as cutting-off wheels or saw sharpening wheels should be stacked on a flat surface of steel, or similar rigid material. Other plain or shaped wheels of appreciable thickness, are best supported on their periphery in racks. The racks should provide cushioned, two point, cradle support to prevent the wheels from rolling.

STORAGE CONDITIONS

During storage, grinding wheels must not be subjected to:

- Exposure to humidity, water or other liquids
- Freezing temperatures
- Any temperature low enough to cause the formation of condensation on the wheels when moving from storage to an area of high temperature

SHELF LIFE OF RESINOID & VITRIFIED BONDED WHEELS

The outer surfaces of certain organically bonded wheels may be affected by oxidation if they are stored for long periods. These types of wheel should not be stored for more than three years and proper stock control should ensure that older wheels are used first. In use, a three year old Resinoid product will act considerably softer than a brand new wheel (wheel will wear away more quickly). The glass bonding system used in vitrified wheels is very inert and generally only attacked by certain acids. Cold temperatures can result in a vitrified wheel cracking if wheels are put away wet and are subjected to freezing temperatures. It must be remembered that the longer a product is in storage the chances of it becoming damaged increases.

Provided vitrified wheels are stored correctly, thoroughly examined and mounted correctly they will last for many years.

RING TEST

The ring test depends upon the damping characteristics of a cracked wheel to alter the sound emitted when it is lightly tapped. The test is applicable only to vitrified bonded wheels. To perform the ring test; support the wheel gently with a finger through the bore section. Using a light non-metallic implement (a file handle is ideal), gently tap the wheel about 45° each side of the vertical centre line. Rotate the wheel 45° and repeat the test.

The sound and undamaged wheel will omit a clear tone. If cracked, there will be a dead dull sound – not a clear ring – and the wheel should NOT be used. The ring test should be carried out in a place where the ring can easily be heard.

SAFE WORKING PRACTICES

PERSONAL PROTECTION

Safety goggles, ear defenders, safety gloves, dust masks and, if conditions are severe, additional face protection. Leather aprons and safety shoes must be worn.

Mouth Protection

Wear Gloves

Eye Protection

Ear Protection

Read Instructions

Damaged Wheel
- Do not use

Dry

Wet

TRAINING OF OPERATORS

Grinding operators should be trained in the safe use of each machine they operate.

SPEEDS

No abrasive wheel should be operated at a speed in excess of the maximum permissible speed marked on the wheel in RPM when the wheel is new and full size. It is permissible, however, to increase the spindle speed of the machine beyond the RPM stated on the wheel provided the increase is in proportion to the reduction in diameter and that the original peripheral speed is not exceeded (quoted on the wheel in metres/sec). In high production areas it is now normal for machines to have constant peripheral speed spindles. This is an electronic device that automatically increases the spindle speed of the machine as the wheel diameter wears down and prevents most of the reduction in wheel performance that is experienced when the wheel becomes smaller.

COOLANTS

The strength of resin bonded grinding wheels can be reduced by coolants. The concentration and alkalinity of coolants should be regularly checked and a pH value of 8 should not be exceeded. Prolonged immersion of a stationary wheel in coolant can produce an out of balance condition. Coolant should be shut off before stopping a wet grinding wheel, and the wheel allowed to run free until all the coolant has been spun out.

WORK RESTS

Work rests should be kept adjusted as close as possible (gap between wheel and work rest should not exceed 3mm) to the wheel and maintained in good condition.

TRUING & DRESSING

Re-dressing of wheels that have become malformed and out of truth in off-hand operations must only be performed by a competent person. If an out of balance condition, due to the wheel wearing excessively out-of-round, cannot be corrected by truing, the wheel should be removed from the machine.

Wheels should be dressed regularly to avoid loading

SIDE GRINDING

Side grinding should only be performed with wheels designed for this purpose (straight cups etc.). Grinding on the flat sides of wheels designed for peripheral grinding may be dangerous and cause a wheel breakage. This does not preclude their use for certain precision applications such as shoulder and form grinding, where it is recognised that a limited amount of side grinding is performed; however, in these operations the operator has control of the pressure through the hand wheels of the machine whereas with bench grinding and off-hand machines the pressure is uncontrolled. Extreme caution should be exercised not to use excessive pressure. As a general guide, do not use a straight wheel which has a thickness of less than 10% of the wheel diameter for side grinding.

ORGANIC CUTTING-OFF WHEELS

'Non-reinforced' cutting-off wheels should never be used:

- On a portable grinding machine
- On any machine where the workpiece is fed into the wheel by hand

Cutting-off wheels should only be mounted on machines designed for their use. Cutting-off wheels should be inspected for warping before use. Warped wheels should not be used. When grinding, twisting or the exertion of any pressure on the side of the wheel should be avoided. Workpieces should be rigidly supported and firmly clamped wherever possible.

STOPPING WHEELS

Wheels should not be brought to rest by applying pressure to the periphery or face of the wheel.

ALUMINIUM OXIDE

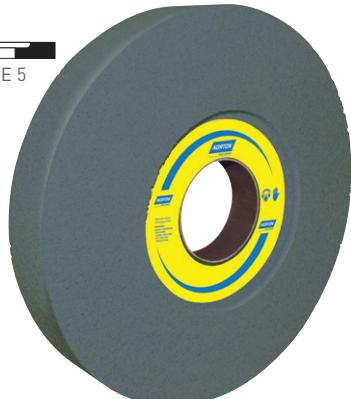

TYPE 1

- Norton general purpose wheels will grind mild to medium hard steels.
Wheel colour - Brown or Blue/Grey
- 150, 180 and 200mm diameter general purpose grinding wheels come with a multibush bore reducing bush to allow the wheel to be mounted on any model machine. Other wheels can be bushed to the bore size on request.
- For hardened tool steels use a 38A grade wheel.
- Always use the machine guard as supplied by the manufacturer. Alteration or removal may result in an oversized wheel being mounted and run at a dangerous speed.
- Check the machine speed against the maximum RPM marked on the wheel.
DO NOT OVERSPEED!

ALUMINIUM OXIDE

TYPE 1

- Norton 38A toolroom wheels are manufactured using fast cutting White Aluminium Oxide. (White in colour).
- These wheels are designed to grind hardened tool steels.
- 38A abrasive is more friable than brown aluminium oxide used in general purpose grinding wheels.
- It maintains its cutting ability by self fracturing. As the grain fractures and breaks down new cutting points are exposed.
- This increased cutting ability also causes the wheel to wear faster than a general purpose grinding wheel.

SEEDED GEL - SG

TYPE 1

- Seeded Gel or SG is Norton's premier abrasive for the grinding of very hard metals such as high speed steel and hardened die steels.
- There are different concentrations to suit a range of applications
5SG = 50% SG abrasive content
3SG = 30% SG abrasive content
SGB = 10% SG abrasive content
- SG wheels are best suited to longer run production and fast stock removal rates metal damage due to heat build up.
- SG wheels can be custom made to suit specific applications. For further information check with your representative or contact the Norton sales office.

ALUMINIUM OXIDE FOR FERROUS METALS

A SHAPE

- Minimum order quantity of 10 applies to all A shape mounted points.
- All spindles are 6.35mm diameter and 35 - 40mm long.
- Speeds shown are for 12mm overhang (lower rpm for greater overhang).
- Designed for fast stock removal, cleaning metal castings and grinding of work pieces with detailed shapes or limited access to work surface.
- The choice of different shapes allows an operator to select the right profile for a wide range of light grinding and blending operations.
- Typical applications include:
 - foundry work - finishing castings
 - deburring cut metal
 - tool, die and precision engineering work.
- Sizes other than stock lines are usually available on an indent basis. Minimums and lead times apply.

ALUMINIUM OXIDE FOR FERROUS METALS

B SHAPE

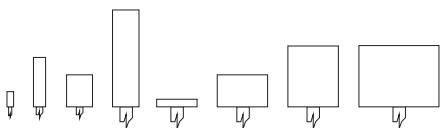

- Minimum order quantity of 10 applies to all B shape mounted points.
- All spindles are 3.18mm diameter and 35 - 40mm long.
- Speeds shown are for 12mm overhang (lower rpm for greater overhang).
- Have a smaller profile than the 'A' shapes and are better suited to lighter more intricate applications.
- Typical applications include:
 - tool and die work
 - jig grinding
 - blending the contours of moulded parts
- Sizes other than stock lines are usually available on an indent basis. Minimums and lead times apply.

ALUMINIUM OXIDE FOR FERROUS METALS

W SHAPE

- Minimum order quantity of 10 applies to all W shape mounted points.
- W142 to W187 - All spindles are 3.18mm diameter and approximately 35 - 40mm long.
- W188 to W242 - All spindles are 6.35mm diameter and approximately 35 - 40mm long.
- Speeds shown are for 12mm overhang (lower rpm for greater overhang).
- Essentially small straight grinding wheel on a shaft.
- Typical applications include:
 - I.D. (internal diameter) grinding
 - jig grinding of bores and deep recesses
 - weld seam blending
- Sizes other than stock lines are usually available on an indent basis. Minimums and lead times apply.
