Air dehumidifier

Stadler Form[®]
SWISS DESIGN SINCE 1998

THEO – Dries in style!

Target humidity selectable to 40%, 50%, 60% or continuous mode

Timer programs operating period from 1–7h (then turns off automatically)

Practical handle makes the device easy to move around

Optional continuous drainage with the hose supplied

Simple elegance combined with top performance make the small air dehumidifier Theo unique. Theo loves humid rooms, efficiently removing excess moisture from the air. An integrated hygostat means the target humidity can be set to 40%, 50% or 60%. Alternatively, Theo can run continuously. His independence is also impressive; Theo's timer can be programmed with a delay start of 1 to 7 hours or an operating period of the same time span. When the time period finishes or the water tank is full, Theo switches off automatically. If Theo stays home alone for longer periods, drainage is easy thanks to the supplied hose. And if you want to move Theo from one room to the other, his convenient handle makes him easy to lift with one hand.
