

TWISTED ENERGY

Carbonated water with natural juice base, green tea extract and hemp extract, it will give you a feeling of freshness and energy without that high sensation.

**Real
Fruit**

**20mg
Hemp**

**50mg
Caffeine**

**5-10
Calories**

**No Added
Sugar**

**B&C
Vitamin**

**CO₂&
Water**

**Natural
Flavors**

A carbonated beverage that you can drink
without worrying about excess sugars or
calories.

**RELAX, THERE ARE SIX
MORE DAYS THIS WEEK**

Hemp not Hype

We know why we love hemp, but if you're new to the movement, here's a little background info to get you started.

Let's get serious for a moment

Hemp products have taken the beverage, among other industries, by storm in recent years.

Due to hemp's recent (*thank you 2018 Farm Bill*) legalization, scientists and researchers have begun to dive into how hemp actually works with the human body. It's a long road ahead, but here's the gist of what we know so far.

Cannabinoids are natural compounds found in the hemp plant.

These compounds are similar in structure to the endocannabinoids our body naturally produces.

The Endocannabinoid System, aka the ECS, was relatively recently discovered (much thanks to the scientists of the 90's).

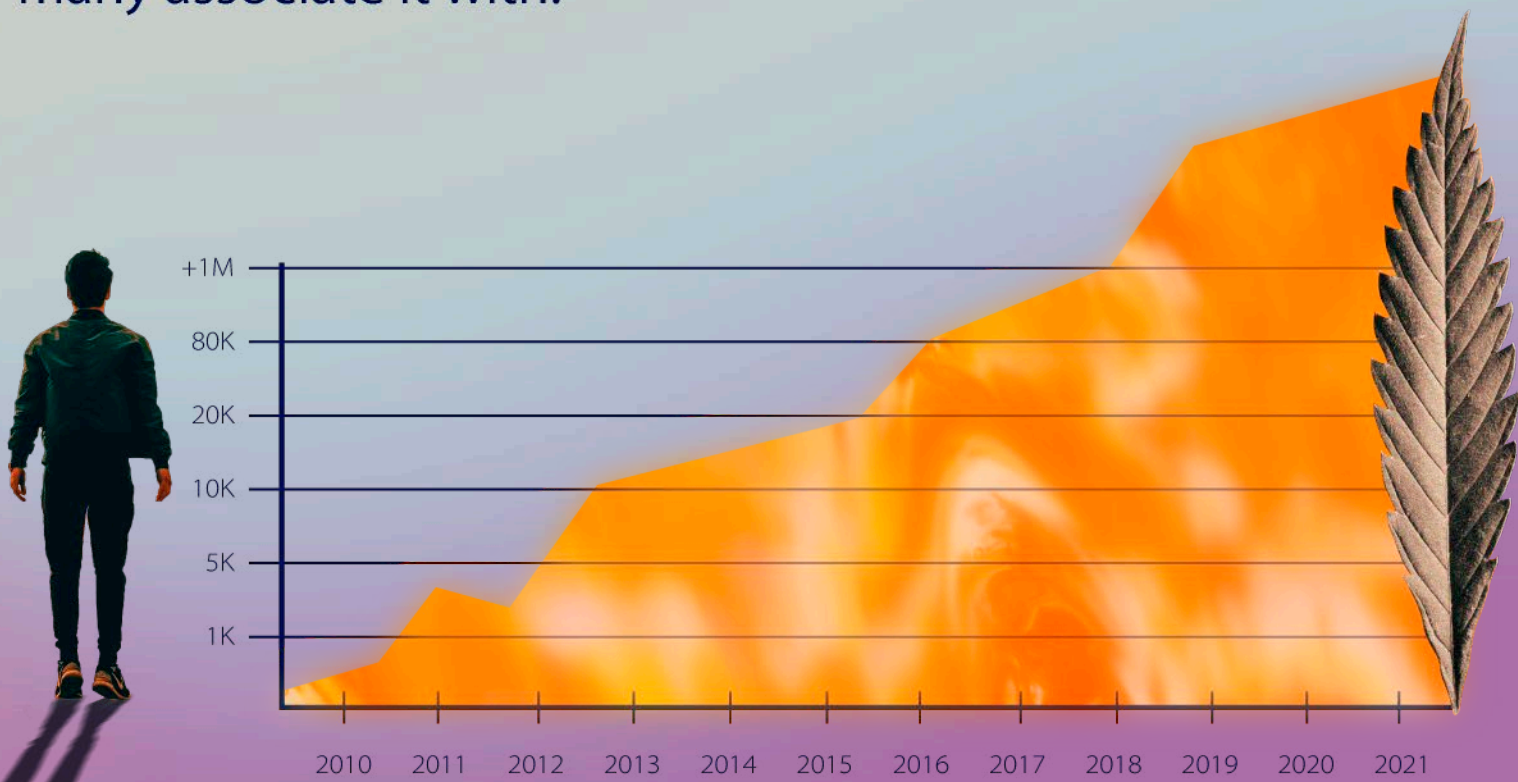

That said...

each cannabinoid has unique effects on the body, catalyzing different responses, mostly due to where and how they interact with the ECS.

Our friend the infamous CBD (cannabidiol) found in Sunday Seltzer, is believed to work with our ECS by blocking certain receptors in the central and peripheral nervous system, leading to the assumed stress, pain, and anxiety relief effects many associate it with.

Worth noting is another well known THC (tetrahydrocannabinol) and for the record not contained in Sunday Seltzer, THC binds directly to receptors in the ECS, particularly in the central nervous system. Subsequently affecting our appetite, memory, and motor skills, alongside creating feelings of euphoria, relaxation, and the “high” effect many associate it with.

Though further study and clinical trials will be required to confirm the benefits of hemp to the human body.

The number of people integrating hemp extract into their lifestyle is on the rise.

Many with the intention of alleviating social anxiety, or simply to relax and ease daily stress.

We believe in the benefits of hemp from our own experience

Though the best part of our hemp-infused seltzer may very well be what it doesn't do... offering all the fun of a social tonic, without the hangover.
