

11. What happens when a red flower gamete combines with a white flower gamete, and the alleles have an incomplete dominance-type of relationship?
12. What is the term for the condition in which more than one gene affects the way a trait is expressed?
13. True or False? A sex-linked trait is carried on a sex chromosome but does not control the development of a sexual characteristic.
14. Why are males more likely to have a sex-linked disease than females?
15. True or False? A female is considered a carrier if she has a defective sex-linked gene but does not have the disease for which it codes.
16. True or False? Duchenne muscular dystrophy is caused by a sex-linked gene that causes all muscles to become small and weak.
17. How many defective alleles does a person need to have in order to have an autosomal recessive genetic disease?
18. True or False? Genes are altered and made abnormal due to infections.
19. Down syndrome is a type of what genetic disease?
20. True or False? Selective breeding is an example of genetic engineering.
21. Can an organism be given a trait it does not have?
22. True or False? Evolutionists believe that life is on this planet for a reason and creationists believe life exists here by events that occurred through random chance.
23. True or False? Evolution would likely be an atheist's way of describing how life originated on earth.
24. True or False? Charles Darwin is considered the father of evolution.
