AIRTIGHT UNITS

- COOLED BY FORCED AIR

UNIT
EV80

- COOLED BY SEA WATER

UNIT
EAF80

The refrigeration units can be cooled with forced air, or cooled with sea water by means of a circulation pump.

The location of the refrigeration unit must be well ventilated and must allow adequate air passage. It is essential to provide good ventilation to the refrigerating unit. The correct working of the system is guaranteed if there is at least 100m³/h airflow to the compressor. We suggest air opening at least 400cm² for suction and at least 400cm² for warm air exit.

The available voltages are 12 / 24Vdc - 220Vac 50Hz - 110Vac 60Hz.
