Keys-on-Tap
powered by QR2id

The ultimate automotive key management and security system

As automotive dealers and auction houses struggle with key security and management, Keys-on-Tap offers a powerful solution to reduce risk and make everyone's lives easier.

Keys-on-Tap is a key management platform for automotive dealerships and auction houses that solves problems that previously seemed insurmountable.

The new platform integrates Harcor's existing range of iKLAS electronic key cabinets with QR2id to deliver enhanced security and management of vehicles and their keys.

Consider the following:

Speed (Really Fast!)

Keys-on-Tap saves time and eases the stress associated with conventional automotive key management. The secure storage location or current custodian is immediately available to authorised users – for EVERY set of keys. Keys are quickly and conveniently accessed, and securely stored, by authorised users with just a few taps on their smart phone. Yes, there is an App for that!!
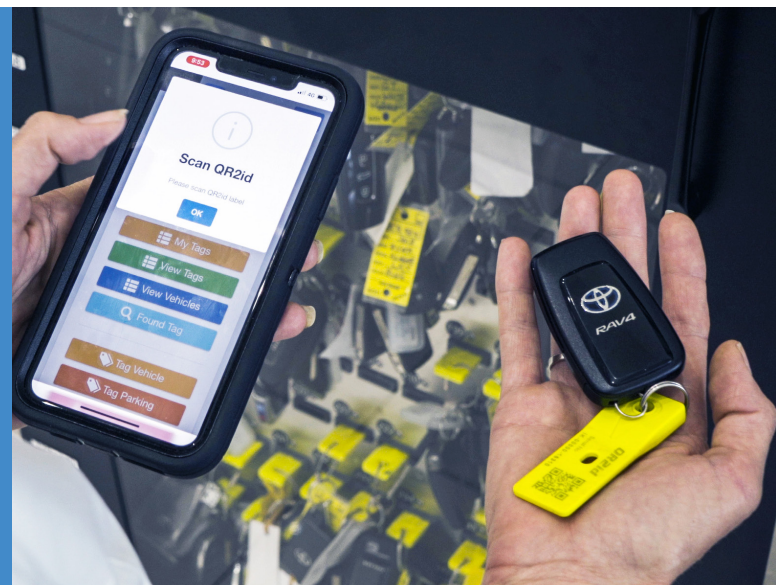

Security

The iKLAS electronic key cabinets used in the Keys-on-Tap solution provide robust physical security for keys. Each polycarbonate, QR2id-enabled key tag is electronically locked in place within an electrically locked heavy duty key cabinet; giving two layers of protection. Keys-on-Tap also records photos of users during key retrieval and return, enabling managers to review precisely who accessed the cabinet.

Who has the keys?!!

▼ Quickly, conveniently, and reliably track the chain-of-custody for all keys. The person retrieving the keys from the secure iKLAS key cabinet is the custodian until they correctly transfer custody, or securely store the keys back in a cabinet.

▼ Having immediate access to an assured chain-of-custody saves so much time that Keys-on-Tap pays for itself.

Parking Bay Smarts

Keys-on-Tap brings new innovations to frustrating parking bay issues. Where vehicles may be blocking the one you need, the system automatically identifies all the keys needed and makes them available to an authorised user. Now that's a time saver!

Streamline Audits

Keys-on-Tap also shows authorised users exactly where cars are located in real-time, a feature that dramatically speeds up audits. In one example, the system cut the audit time from three days to just one day.

Unlimited Users – Fully Extensible

Internal and external users can be added, with Roles assigned to set each user's privileges in the system. Keys-on-Tap also has the benefit of being infinitely scalable. The system grows with you. Additional key cabinets can be added, general purpose keys secured, vehicle accessories identified, and even workshop tools tracked as required.

QR2id Code Intelligence

What happens when a QR2id Code is scanned can be varied to suit different user groups and workflows. For example, scanning the QR2id Code on the key tag can present a contact form to a member of the public finding lost keys, where an authorised user has access to applicable workflows. Similarly scanning the QR2id Code on a vehicle can take a public user to a webpage that showcases that vehicle's specifications and sale information, whereas an authoriser user will have access to a host of Keys-on-Tap functions.

Capture Photos and add Notes

Keys-on-Tap lets you add photos to vehicles and anywhere they are needed. Whether capturing condition, identification or odometer details, or as part of other workflows, photos and notes can be added to any record to enhance auditability and productivity.

Demonstration

The Keys-on-Tap platform was developed in partnership by Harcor and Amtac to provide a key management system with features that have never before been available to the automotive sector.
To discover more or for a demo contact Harcor.

Court-Ready Logs

Keys-on-Tap provides court-ready logs, for situations when dealerships need to take legal action. Dealers can see precisely when and who handled keys, and can use this information in legal proceedings.
