

Warning • Always use this product with adult supervision. Accidents have occurred when babies have been left alone with drinking equipment due to the baby falling or the product being disassembled.

- Always check food temperature before feeding by testing on a sensitive part of your skin, the back of your wrist, for example.
- When using formula, follow the formula milk manufacturer's instructions and allow the freshly boiled water to cool before pouring into the bottle.
- Never use feeding nipple/teat as a pacifier/soother.
- Continuous and prolonged sucking of fluids

will cause tooth decay. Tooth decay in young children can occur even when non-sweetened fluids are used. This can occur if the baby is allowed to use the bottle for long periods through the day and particularly through the night, when saliva flow is reduced or if the bottle is used as a pacifier/soother.

nanobébé | Silicone Nipple/Teat

Flow rates

-  PREMIE & NEWBORN
ultra slow flow for
babies 0m+
-  Slow FLOW
for babies 0m+

-  MEDIUM FLOW
for babies 3m+
-  FAST FLOW
for babies 6m+
-  Y-CUT
thick fluids for babies 6m+

STORAGE AND USE

• Inspect before each use and pull the nipple/teat in all directions. Throw away at the first signs of damage or weakness. • Keep all parts not in use out of reach of children.

- For safety and hygiene reasons we recommend that the nipple/teat be replaced at least every 2 months.
- Do not store or leave in direct sunlight or heat, near or in disinfectant ("sterilizing solution") for longer than recommended, as this may weaken the nipple/teat.
- Do not store with or allow to come into contact with solvents or harsh chemicals.

Use only with nanobébé feeding bottles.

ASSEMBLY

First assemble the bottle by simply pushing the bottle body into the base (do not attempt to

twist shut). Then assemble the nipple/teat and screw ring and carefully pull the nipple/teat in different directions to ensure the nipple/teat is inserted evenly. Screw the nipple/teat and screw ring assembly onto the bottle body and base assembly and ensure the two are evenly aligned.

CLEANING:

- Before first use sterilize the nipple/teat either by placing in boiling water for 5 minutes or by using the nanobébé Microwave Steam Sterilizer.
- Clean before each use.
- Always clean immediately after use.
- To clean, place in a dishwasher (top rack only) or use

a nanobébé Electric Bottle Brush (with nipple/teat brush head) with hot soapy water. Rinse in clean water. Dishwasher safe – food colorings may discolor product

- Do not use abrasive cleaning agents or anti-bacterial cleaners.
- Do not allow product to come into contact with oil-based foods since staining may result.
- Do not turn the nipple/teat inside out for cleaning as this may damage the nipple/teat.
- Do not insert any cleaning implement into the hole in the end of the nipple/teat nor into the nipple/teat vents since doing so may result in damage such as splits and tears.
