

Product	Item Code
Solution Leak Detection No.2	5523214

Product Characteristics

Environmentally Safe.

Meets Exacting Telephone Industry Specifications

User Friendly.

Finds Leaks Quickly With No Mess

Contains No Ethylene Glycol.

Designed to be Used at Very Low Temperatures

User Safe

Product Description

- Available as ready-to use solution Dexgreen's "EE" Pressure Testing Solution meets or exceeds (with no ethylene glycol) the specification outlined in BOCS-CA08287, Issue 2, March 15, 1985, for E Pressure Testing Concentrate and Solution.
- The product foams / bubbles when exposed to a gas leak in lead or polyethylene cable sheath, sleeves, splice cases, air pipes, fittings, and associated equipment. "EE" Pressure Testing Solution is ideal for safely and positively identifying leaks associated with pressurised systems and gas pressure testing.
- The ready-to-use solution can be used at temperatures as low as -13oC / 10oF.
- Because the solution contains no ethylene glycol, the "EE" Pressure Products are classified as non-toxic, non-hazardous, and non-regulated. They do not demand the same precautions as traditional E Pressure Products.
