

RPM Fill-A-Buddy Universal Kit Instructions

The RPM fill-a-buddy attachment is a universal quick connect system for using your own vehicles RPM Aux fuel tank or tanks to fill up another car or fuel jug.

Kit Contents:

1. 3pcs connection kit, 1female, 2 male
2. 72" of fuel line

Installations will vary by vehicle as each vehicle has a different length of the fuel hose from the RPM Aux fuel tank pump and the fill neck of the vehicle. This is a universal kit and can be installed per your liking.

1. Plan out the installation location of the connection to give yourself enough room to access when needed. The Fill-A-Buddy connection is going to be installed in-line on the fuel line from the RPM Aux fuel pump and the bulk head fitting on the vehicles fill neck. You may need to cut a section of the supplied fuel line to extend and make a loop giving more length to this line to install the Fill-A-Buddy connection. (some vehicles do not have enough fuel line available for installation)

2. The Female fitting will be connected to the fuel line from the fuel pump.
3. One of the male fittings will be connected to the fuel line from the fill neck.
4. 2nd male fitting will connect to your fuel line hose used for refueling a buddy.
