

FALLOUT

MUSIC GROUP

Thank you for downloading Fallout Music Group's Shelter Series Drops!

Our Shelter Series has been curated specifically for raising money for various charities, and we appreciate your contribution!

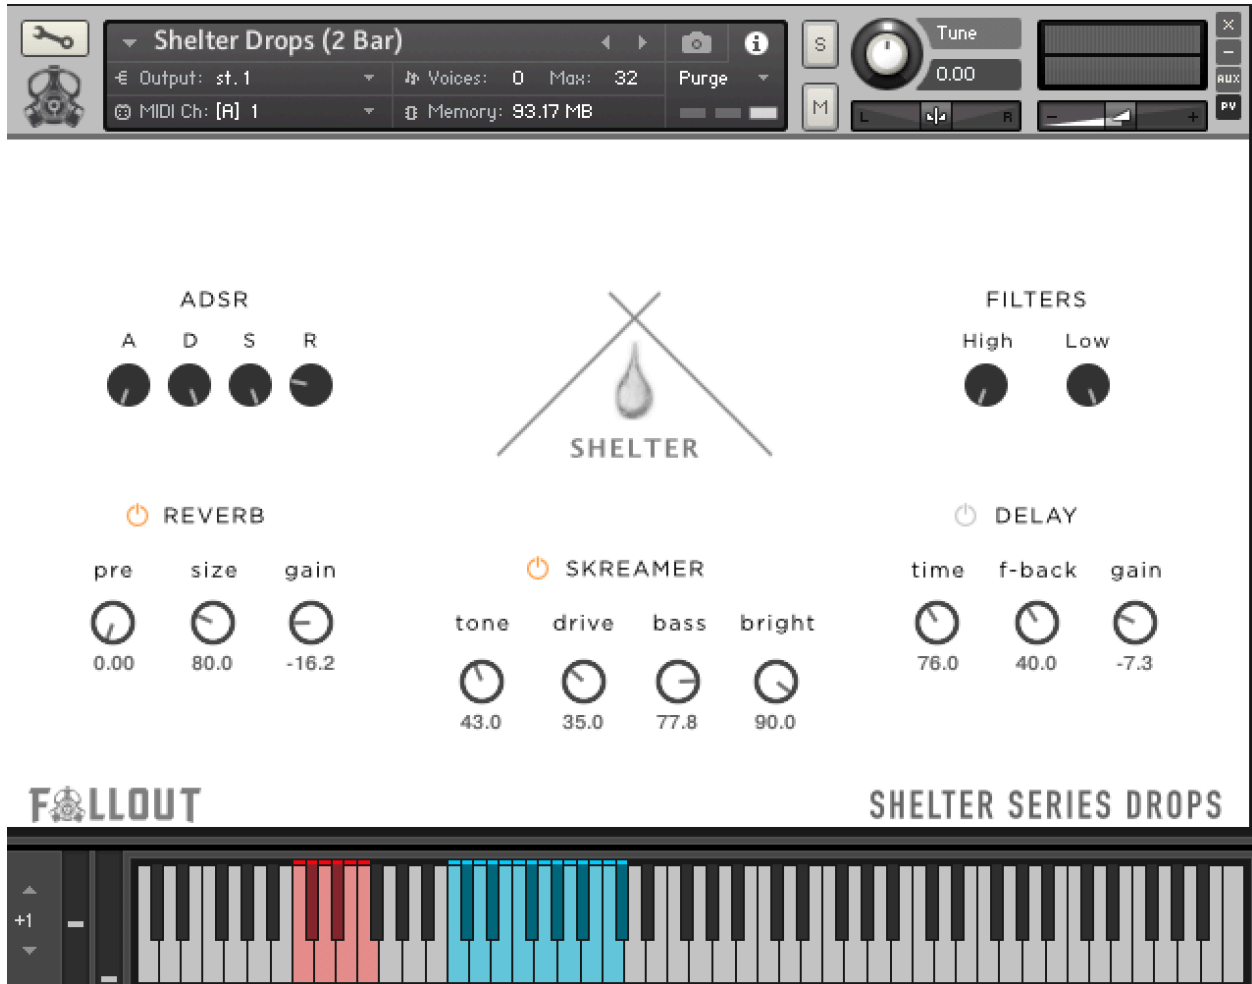

Shelter Series Drops features include:

- Dozens synth/sub drops ready to go in your next trailer, provided in 2 beat, 1 bar, and 2 bar versions
- Dry samples to give you the ultimate flexibility in your mixes
- Global FX, including high and low pass filters, delay, reverb and Screamer distortion
- ADSR controls
- All sources recorded at 24bit, 48k quality

We hope you enjoy using this as much as we have enjoyed making it.

The Interface

The interface is simple and easy to use, offering global ADSR, Filter and FX. Each of the 3 instruments use the same interface. The 1 bar instrument is pictured below:

Within each instrument you have a handful of keyswitches to toggle between slightly different versions of each drop.

The red keyswitches, starting at C0 function exactly the same within each of the instruments. The available keyswitches are:

- C0 - A slightly wet version of the drop that has sweeping ping-pong panning incorporated into the sample
- C#0 - A slightly wet version of the drop without any panning
- D0 - A dry version of the drop that has sweeping ping-pong panning incorporated into the sample (great for adding your own reverb to match your mix)
- D#0 - A dry version of the drop without any panning
- E0 - A dry version of the drop that has some gating effects applied to it. On the longer drops, the gating will be 1/4 note based and will generally only come in during part of the drop. On shorter drops, the gating effect will be 1/8 note based and will be applied throughout the entire drop
- F0 - A dry version of the drop that has gating effects applied to it in triplets. On the longer drops, the gating will be 1/4 note triplet based and will generally only come in during part of the drop. On shorter drops, the gating effect will be 1/8 note triplet based and will be applied throughout the entire drop

Global Features:

- Reverb
- Delay
- ADSR
- High & Low Pass Filters
- Skreamer distortion
